SACRUM INVESTOR PITCH — SPEAKER SCRIPT

Presenter note

The financial figures in the current slides are illustrative planning estimates, not verified historical accounts or a committed forecast. In particular, quarterly revenue, 2026 revenue/profit, client-level revenue splits, and the 2027–2029 targets must be checked against company records before presenting. The government-project contribution is conditional, not secured revenue unless a signed contract supports that statement. Replace any estimate that is not supported before the meeting.

OPENING

"Thank you for taking the time to meet with us. SACRUM is building a cloud infrastructure services business for organizations that need reliable, secure operations across public cloud and India-hosted environments. Our model combines managed services with a unified operating platform. I'll walk through our financial trajectory, how the business earns and deploys capital, our scale-up case, the investment terms, and how we would use the funds."

SLIDE 1 — REVENUE & PROFITABILITY TRAJECTORY

"Let me start with the operating trajectory. The table shows quarterly revenue and quarter-on-quarter growth, followed by the annual revenue and net-profit trend. The story we want to demonstrate is a move from an early operating base toward a larger, more profitable infrastructure business.

"The 2026 figures on this slide are planning estimates, including an annualized revenue figure based on the first two quarters, and should not be read as audited actuals. The early-year figures and growth rates should likewise be replaced with verified financials before we circulate the deck. Our goal is to build predictable recurring revenue through long-term cloud operations and infrastructure engagements, while improving delivery efficiency as we scale."

TRANSITION

"With that trajectory in mind, the next slide shows how the illustrative 2026 revenue model flows through the business."

SLIDE 2 — 2026 REVENUE FLOW & NET PROFIT

"This Sankey illustrates a modeled 2026 case: ₹18 crore in revenue, ₹14.4 crore in operating costs, and ₹3.6 crore in net profit, which implies a 20% net margin. The client names are shown to make the revenue mix tangible, but the client-level amounts are illustrative allocations, not reported invoice totals. Please treat them as placeholders until finance verifies the actual contribution by customer.

"The cost side separates cloud and hyperscaler hosting, India infrastructure operations, people and delivery, office and administration, and other operating costs. This is a way to discuss the economics of the model—not a substitute for audited financial statements."

TRANSITION

"The current-year case provides the baseline. Our next slide shows the conditional scale-up opportunity if we execute on the required customer and infrastructure milestones."

SLIDE 3 — THREE-YEAR REVENUE & PROFIT OUTLOOK

"Our planning scenario targets ₹60 crore of revenue and ₹12 crore of net profit in 2027, ₹90 crore and ₹18 crore in 2028, and ₹120 crore and ₹24 crore in 2029. The model assumes a 20% net margin.

"The investment thesis has three parts: our platform-plus-managed-services model, the opportunity to build capacity for India-resident government workloads, and the potential to scale if we execute well. This is an ambitious, conditional scenario—not committed guidance. A potential government engagement could contribute around ₹30

crore of annual revenue if it is awarded, contracted, delivered, and recognized. Reaching the targets also requires growth in our existing business, successful delivery, capacity, and working capital. We are presenting the target to show the scale of the opportunity, while recognizing that project timing and execution affect the outcome. These are potential business outcomes, not a promised investor return."

TRANSITION

"If the operating plan is compelling, the next question is how the proposed round is priced and what ownership looks like."

SLIDE 4 — VALUATION MOMENTUM & OWNERSHIP

"The ownership chart shows the current stated cap table: 85% promoters, 10% for the January 2025 investor, and 5% for the seed investor. The January 2025 post-money valuation was ₹150 crore. Our current stated valuation is ₹200 crore, and we are proposing to raise ₹22 crore for 10% equity, implying a ₹220 crore post-money valuation.

"The 2023 and 2024 valuation points shown are illustrative estimates, not documented transaction valuations. The January 2025 investment amount displayed as implied is a calculation from the stated post-money valuation and 10% ownership; it should be checked against the actual share subscription documents. We are happy to walk through the cap table, valuation basis, and transaction documents in diligence."

TRANSITION

"Finally, here is the deployment plan for the capital and the specific capability it is intended to build."

SLIDE 5 — FUNDING ALLOCATION & DELIVERY READINESS

"We are seeking ₹22 crore. We propose allocating ₹14 crore, or about 63.6%, to India-based infrastructure, and ₹8 crore, or about 36.4%, to expansion and a new office. The infrastructure investment is intended to support India-resident configuration and operational data, with workloads continuing to run on hyperscalers where appropriate. The office and expansion allocation is intended to support hiring, project delivery, and customer operations.

"The rationale is the government data-residency opportunity described here, including the IRCTC project context. We should describe project status precisely: a project being in a final phase is not the same as a signed award, production deployment, or recognized revenue. We will substantiate the status, customer requirements, budget, and milestones with appropriate documentation."

CLOSING

"In summary, SACRUM is combining managed cloud operations with India-hosted infrastructure capabilities. The round would fund the infrastructure and delivery capacity needed to pursue that opportunity. Our proposal is ₹22 crore for 10% equity at an implied ₹220 crore post-money valuation. The growth case is conditional, and we welcome a detailed review of the financial model, cap table, project evidence, and use-of-funds milestones. What would you like to examine first?"

PRESENTATION CHECKLIST

- Replace all illustrative revenue, profit, client allocation, valuation, and forecast figures with finance-approved numbers where available.

- Confirm whether each historical figure is actual, estimated, annualized, or projected; label it on the slide and in the spoken explanation.

- Confirm the precise IRCTC project status and what can be disclosed. Do not describe a prospective or in-progress project as awarded or contracted without evidence.

- Confirm client-name disclosure rights and verify client-level revenue using invoices or contracts.

- Reconcile the ₹200 crore current valuation with the ₹198 crore implied pre-money valuation (₹220 crore post-money less ₹22 crore new capital).

- Confirm use-of-funds budget, timing, taxes, hiring, infrastructure procurement, and any working-capital needs.

- Avoid promising a return, exit, profit margin, government award, or 2029 outcome.
