SACRUM | Investor Q&A Preparation

Likely investor questions with evidence-conscious response guidance

PRESENTER NOTE The current deck contains illustrative financials and client-level allocations. Treat these answers as preparation guidance, not verified company facts. Reconcile figures, contract status, disclosure permissions, and transaction terms before the investor meeting. Never present modeled assumptions as audited results or secured revenue.

Use each answer as a concise starting point, then offer supporting documents where available. If a number or project status is unconfirmed, say so plainly and follow up with verified information.

1. Are the revenue and profit figures actual results?

Suggested response: Not all of them. The current deck includes illustrative planning figures. In particular, ₹18 Cr 2026 revenue is annualized from a modeled first-half amount of ₹9 Cr, and ₹3.6 Cr profit is a modeled 20% margin. Do not call these audited or achieved results. Replace them with finance-approved actuals before the meeting.

2. How were quarterly revenue and growth rates calculated?

Suggested response: The current slide uses modeled quarterly revenue and quarter-on-quarter growth, with Q1 2023 marked N/A because no prior-quarter baseline is shown. Reconcile the series to the ledger and state the actual reporting period and accounting basis before presenting.

3. Are the Sankey amounts by client actual?

Suggested response: No. The client allocations are illustrative assumptions that sum to ₹18 Cr; they are not actual invoice amounts. Provide a verified, permission-cleared customer revenue schedule in diligence and do not attribute amounts to clients until confirmed.

4. Are those companies current customers, and may you disclose their names?

Suggested response: The names and service descriptions came from management-provided material and were stated to be approved for investor-deck disclosure. Confirm each relationship, current scope, referenceability, and disclosure approval against source documents before making specific claims.

5. What portion of revenue is recurring or contracted?

Suggested response: The deck does not substantiate recurring revenue percentage, contract duration, renewal rate, or backlog. Answer from a verified contract and billing schedule rather than infer a figure from the managed-services model.

6. What does the 20% net margin represent?

Suggested response: It is a planning assumption, not a margin guarantee. Reconcile it to a cost model and define whether it is after interest, tax, depreciation, and one-time items. The ₹3.6 Cr 2026 profit figure is illustrative.

7. How do you get from ₹18 Cr in 2026 to ₹60 Cr in 2027?

Suggested response: That is a conditional scenario, not contracted guidance. It assumes a potential government project contributes about ₹30 Cr annual revenue, alongside substantial growth in the existing business. The project award, start date, delivery acceptance, and revenue-recognition schedule need verification; support the remaining growth with pipeline and capacity evidence.

8. Is the ₹30 Cr/year government project awarded or contracted?

Suggested response: Do not describe it as awarded or contracted unless signed documents establish that. Management described the project as being in a final phase; that phrase alone does not establish an award, purchase order, deployment, or recognized revenue. State the exact stage and share supporting evidence where permitted.

9. What if the government project is delayed or does not proceed?

Suggested response: The ₹60/90/120 Cr path would need to be revised. Prepare a downside case based on verified contracts and pipeline, and a contingency plan for phased capex, hiring, runway, and other opportunities. Do not imply the plan is already approved if it is not.

10. Why do projections assume a 20% net margin?

Suggested response: The 20% is a simplifying modeled assumption, not an independently validated forecast. Support it with unit economics for cloud/vendor costs, infrastructure utilization, personnel, support, office costs, depreciation, financing, and taxes. Actual margins may differ.

11. Why does the business need ₹14 Cr for infrastructure?

Suggested response: The proposed use is India-hosted infrastructure for India-resident configuration and operational data, with workloads potentially continuing on hyperscalers. Substantiate the ₹14 Cr with a bill of materials, vendor quotes, deployment milestones, utilization assumptions, security design, operating costs, and customer requirements.

12. Why allocate ₹8 Cr to expansion and a new office?

Suggested response: The stated purpose is to support hiring, project delivery, and customer operations. Prepare lease and fit-out estimates, hiring plans, timing, and measurable milestones. This is a proposed allocation, not evidence that the costs are committed.

13. When will the ₹22 Cr be spent?

Suggested response: The slide shows only a top-level allocation. Prepare a quarterly budget and milestone plan for procurement, commissioning, hiring, and customer acceptance, including owners, dependencies, and contingency. Do not invent dates.

14. How will you meet India data-residency requirements while using AWS or GCP?

Suggested response: The intended model is India-hosted specified configuration and operational data while customer workloads may run on hyperscalers. Validate data classification, architecture, access controls, encryption, backup locations, subprocessors, and contractual requirements for each customer before promising compliance.

15. What is the exact status of the IRCTC project?

Suggested response: The slide reflects management-provided context and says it is in a final phase. State precisely what is signed, outstanding conditions, expected start and acceptance milestones, and what IRCTC has authorized SACRUM to disclose. Do not equate final phase with a signed contract.

16. How did you arrive at ₹220 Cr post-money valuation?

Suggested response: ₹22 Cr for 10% implies ₹220 Cr post-money and ₹198 Cr pre-money for a primary issuance. The company also states a current valuation of ₹200 Cr and a January 2025 post-money valuation of ₹150 Cr. Reconcile the ₹2 Cr difference between current stated value and implied pre-money, and present documented valuation support.

17. Why does the valuation chart show ₹50 Cr and ₹100 Cr for 2023 and 2024?

Suggested response: Those are illustrative estimates, not documented financing-round prices or independently established fair values. Do not describe them as transaction valuations. Remove them or replace them with supportable evidence if available.

18. How much did the January 2025 investor invest?

Suggested response: ₹15 Cr is implied only if ₹150 Cr was post-money and the 10% stake was issued as new primary equity. Confirm amount and structure from subscription and share-allotment documents before presenting it as historical investment.

19. What will ownership look like after the round?

Suggested response: Assuming a primary issuance giving the new investor 10% post-money, with no options, convertibles, or other changes, the current 85% / 10% / 5% split becomes 76.5% promoters, 9% January investor, 4.5% seed investor, and 10% new investor. Confirm against a fully diluted cap table and transaction documents.

20. How does the investor make a return, and when can they exit?

Suggested response: This is equity, so value depends on company performance and a future liquidity event or other lawful route. The deck does not promise dividends, a buyback, listing, acquisition, return multiple, or exit date. Discuss rights and liquidity only from definitive documents and an agreed plan.

21. What are the biggest risks?

Suggested response: Key risks include a government project not being awarded or being delayed, procurement and acceptance cycles, customer concentration, capex and utilization, cloud/vendor costs, security and compliance obligations, hiring and execution capacity, working capital, and the margin assumption not being achieved. Quantify these with a downside case and mitigation owners.

22. What evidence can you provide in diligence?

Suggested response: Prepare finance-approved statements and bank reconciliations; tax filings; fully diluted cap table and prior round documents; customer contracts and permitted references; verified invoices and collections; project-stage evidence; backlog and pipeline definitions; infrastructure quotes and architecture; security/compliance evidence; and a time-phased use-of-funds and forecast model.

23. What if the round raises less than ₹22 Cr?

Suggested response: The deck does not specify a minimum close or staged plan. Prepare a prioritized budget showing what can be phased, what is essential for committed delivery, runway at different raise sizes, and the impact on customer milestones. Do not promise unchanged targets if the funding plan changes.

24. Why SACRUM rather than another cloud services company?

Suggested response: The thesis is that vendor-neutral managed services, proprietary operational software, and India-hosted infrastructure can address hybrid-cloud and data-residency needs. The opportunity becomes compelling if we demonstrate repeatable customer acquisition, durable contracts, platform adoption, disciplined infrastructure economics, and reliable execution. Support each claim with evidence.

Before the meeting

- Reconcile ₹22 Cr for 10% (₹198 Cr implied pre-money) with the stated ₹200 Cr current valuation.
- Replace modeled historical and 2026 financials with finance-approved results; label actuals, estimates, and annualized values distinctly.
- Verify project award/status, ₹30 Cr annual-revenue assumption, disclosure rights, and the IRCTC description against source documents.
- Prepare a downside scenario, time-phased use-of-funds budget, and evidence for customer revenue, costs, and the 20% margin assumption.
