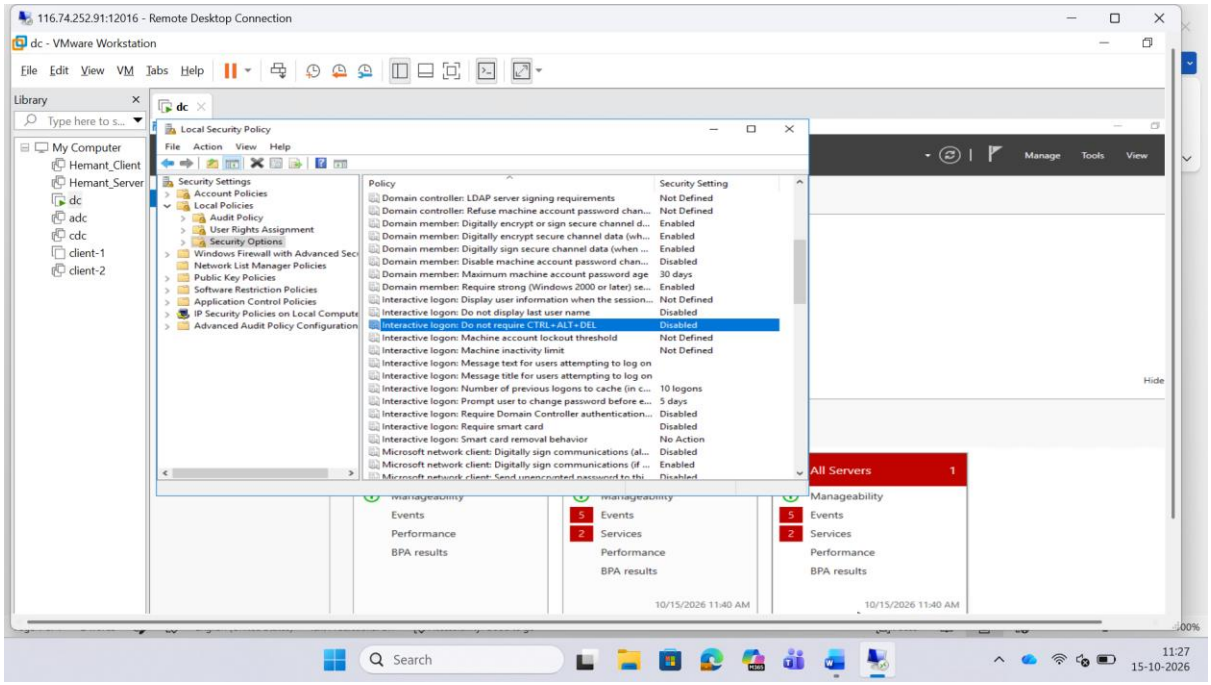
Sysdm.cpl

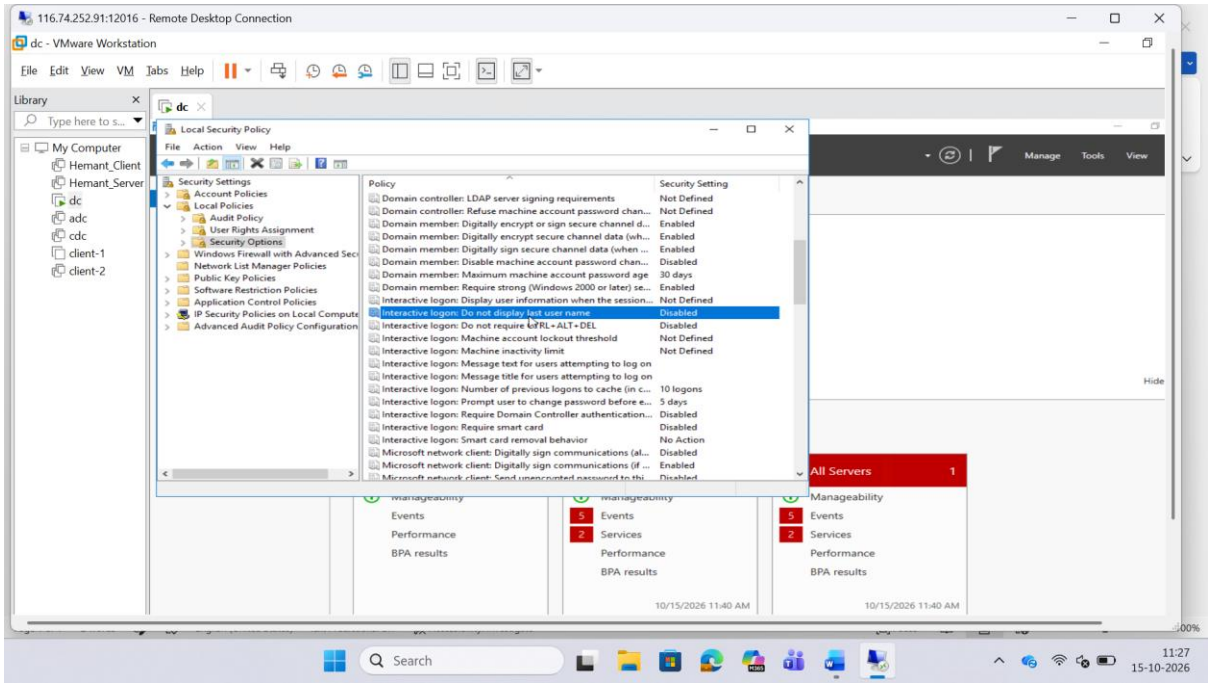
Flushdns

Ncpa.cpl

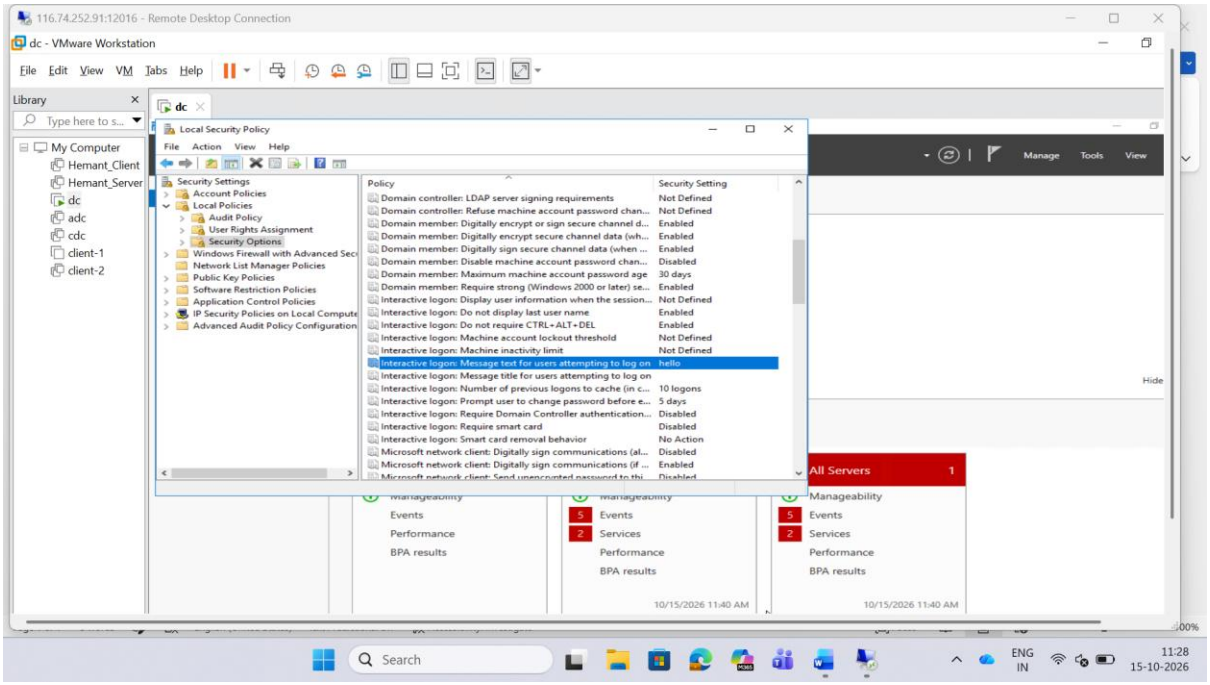
To disable *CTRL+ALT+DEL disable*



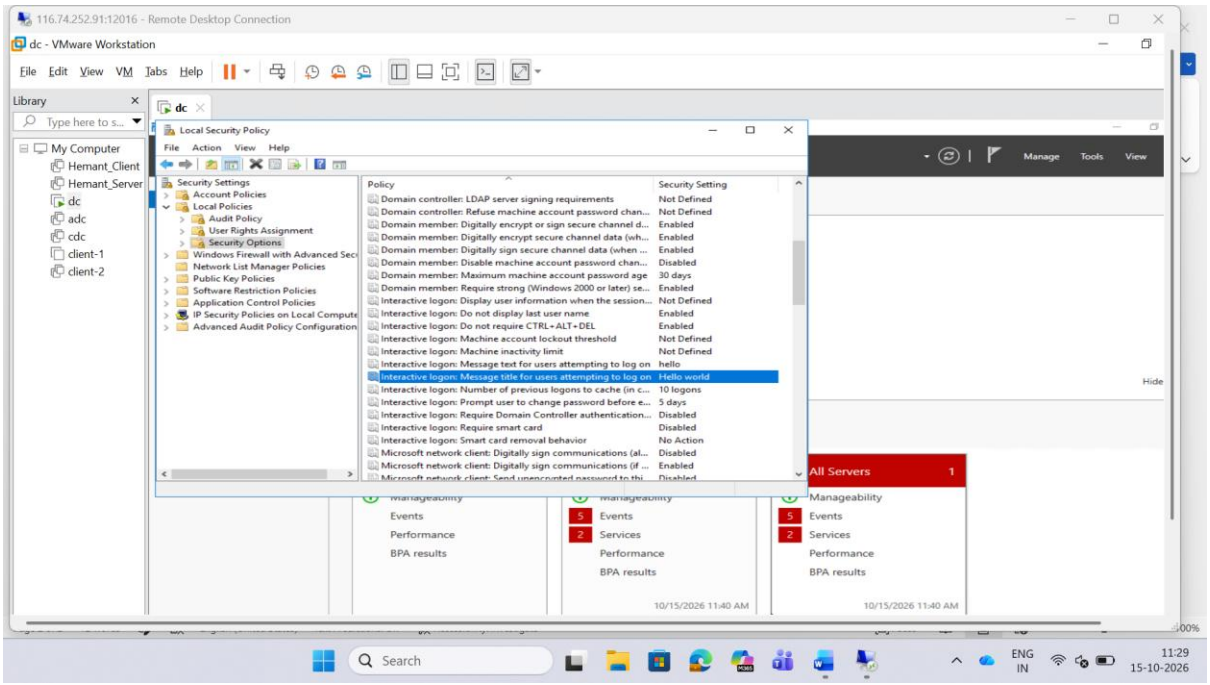
To *do not display the all users*



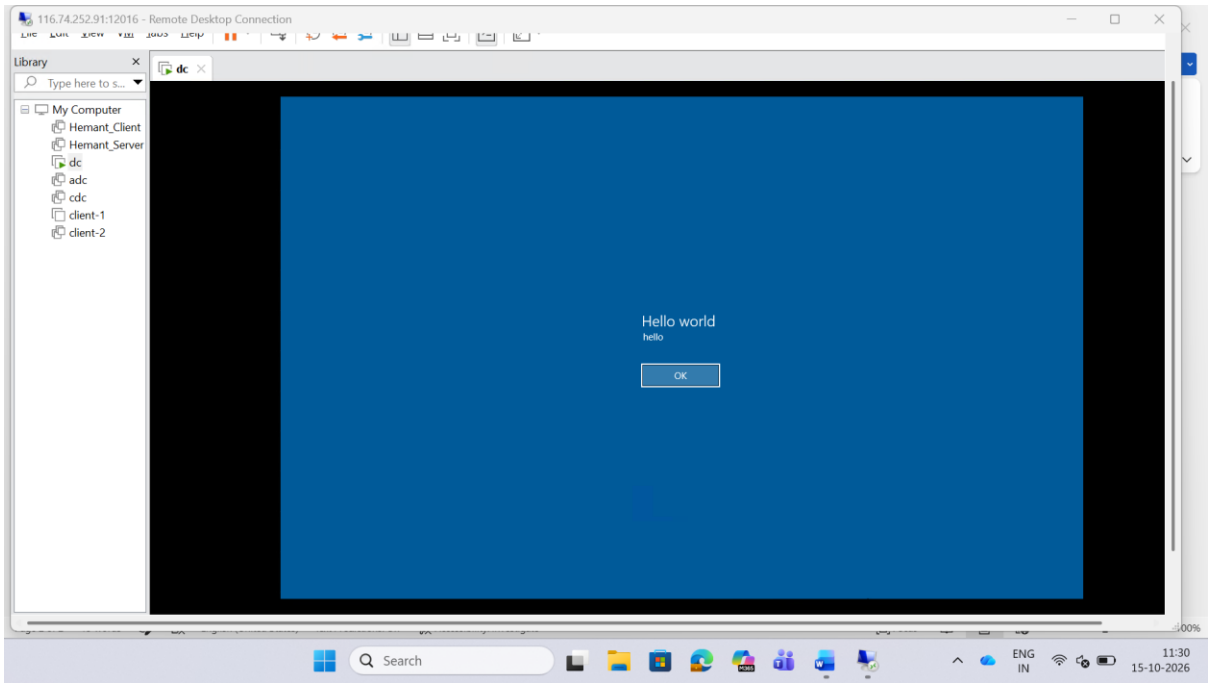
To Turn of the *Message on login screen text*



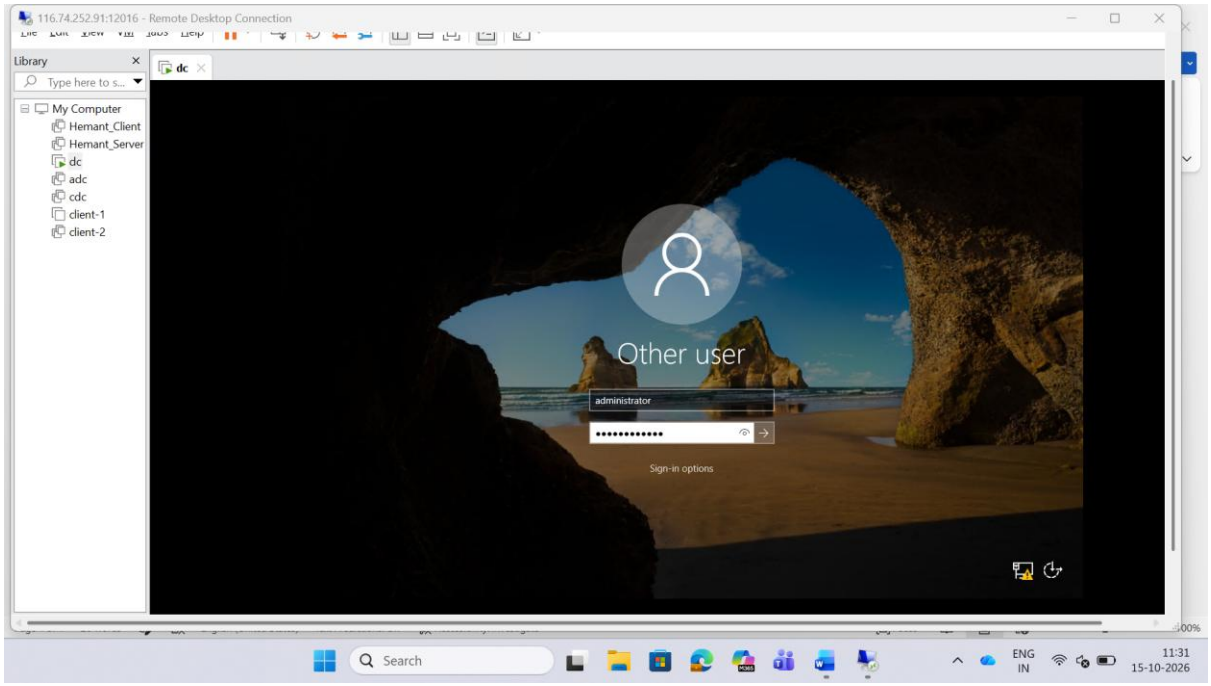
To turn on the *Message on login screen text Title*



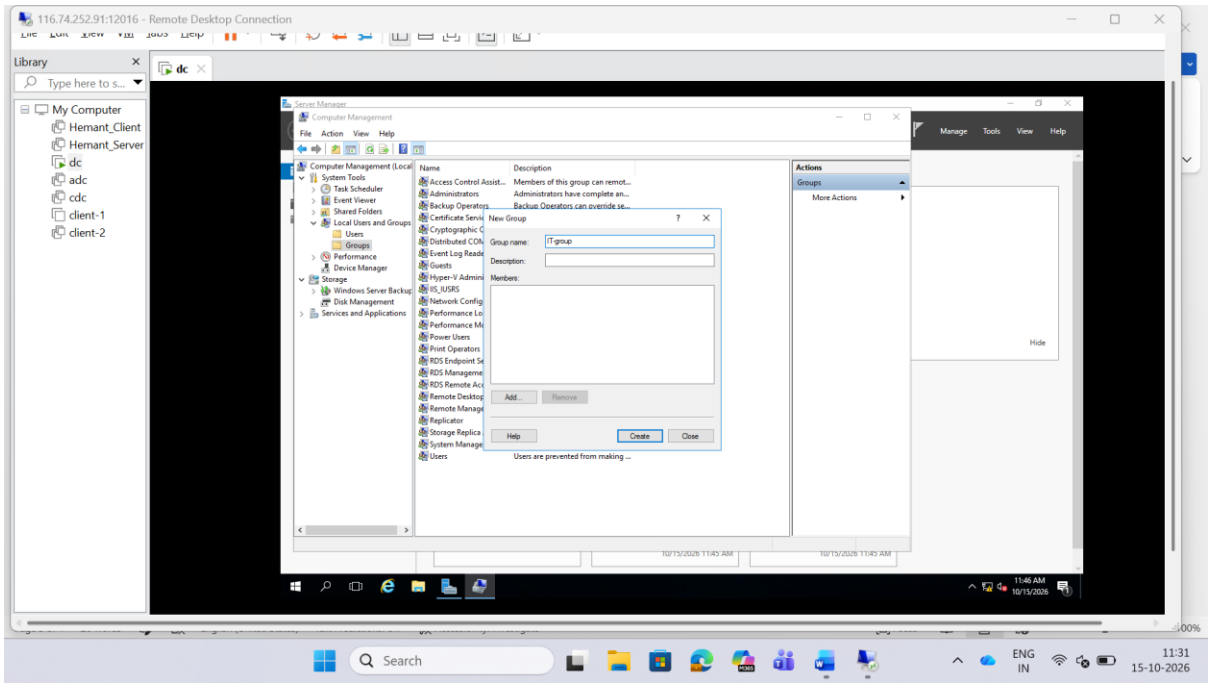
This is how it will look after turning on the Message



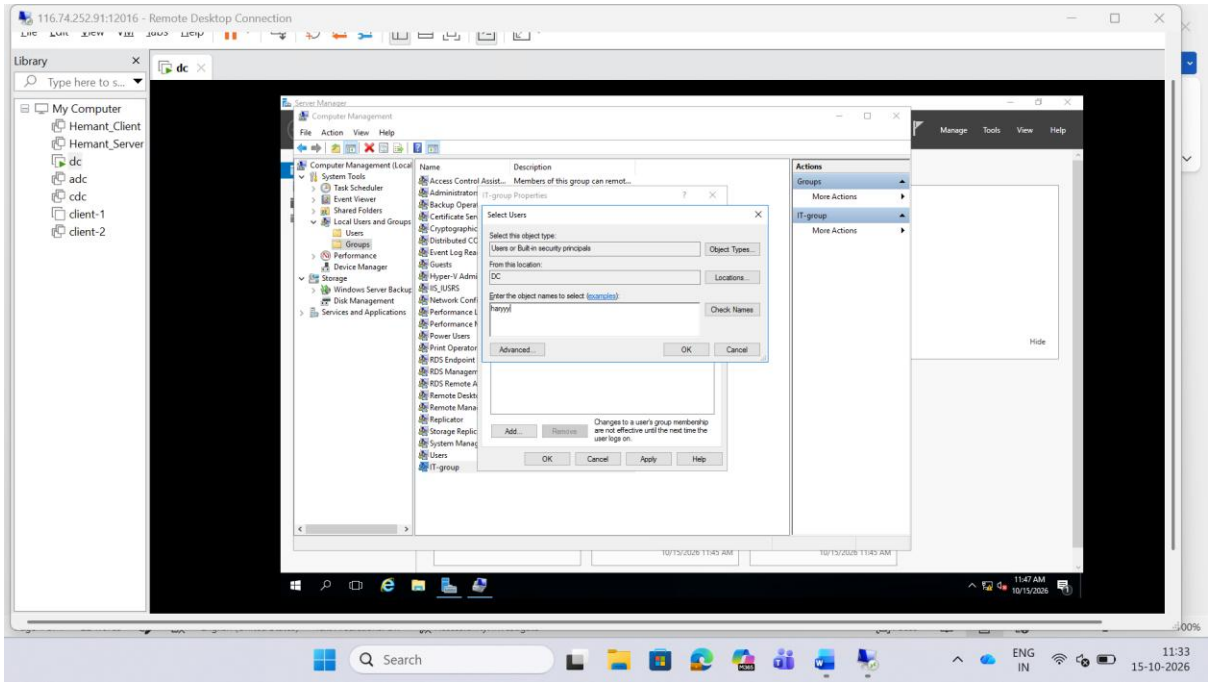
Won’t be able to see the users need to enter user name manually



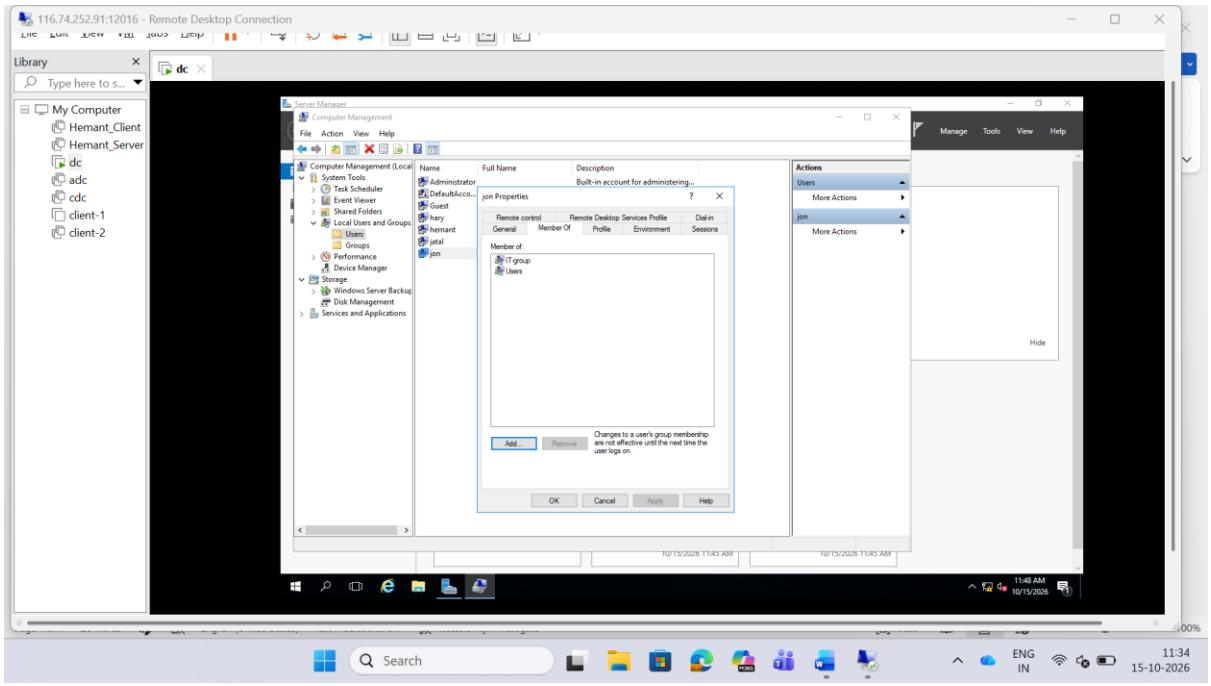
Creation of Groups



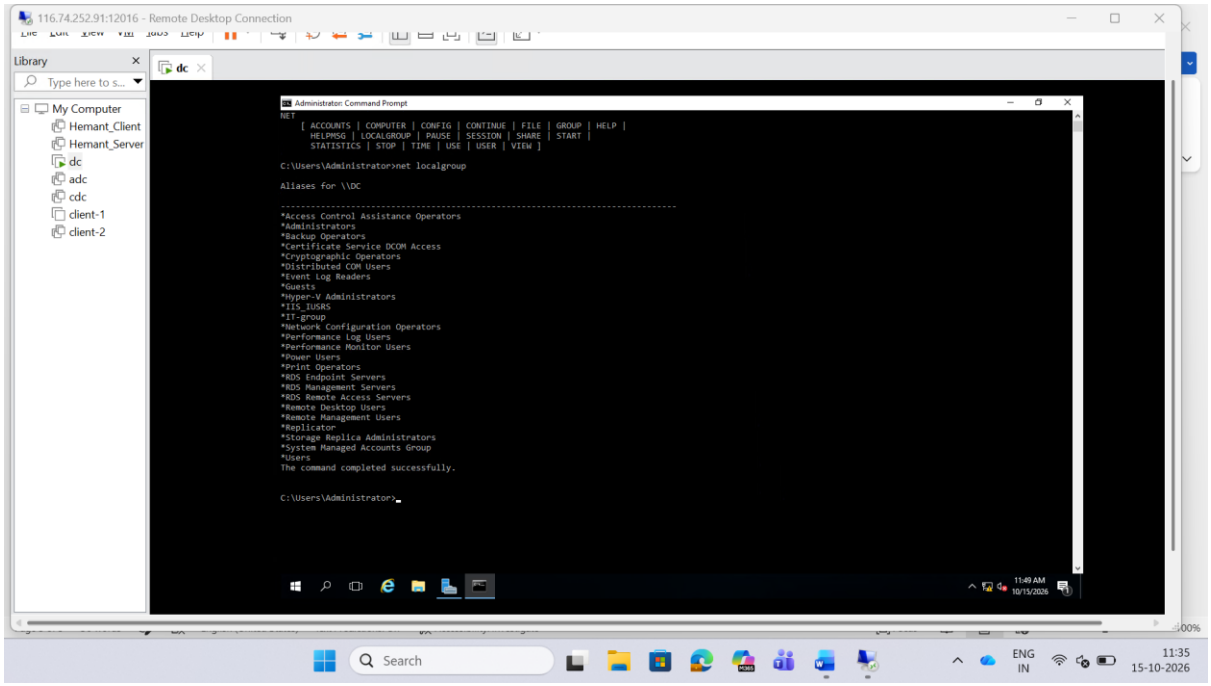
Adding members to groups



To check if member has joined a group or not

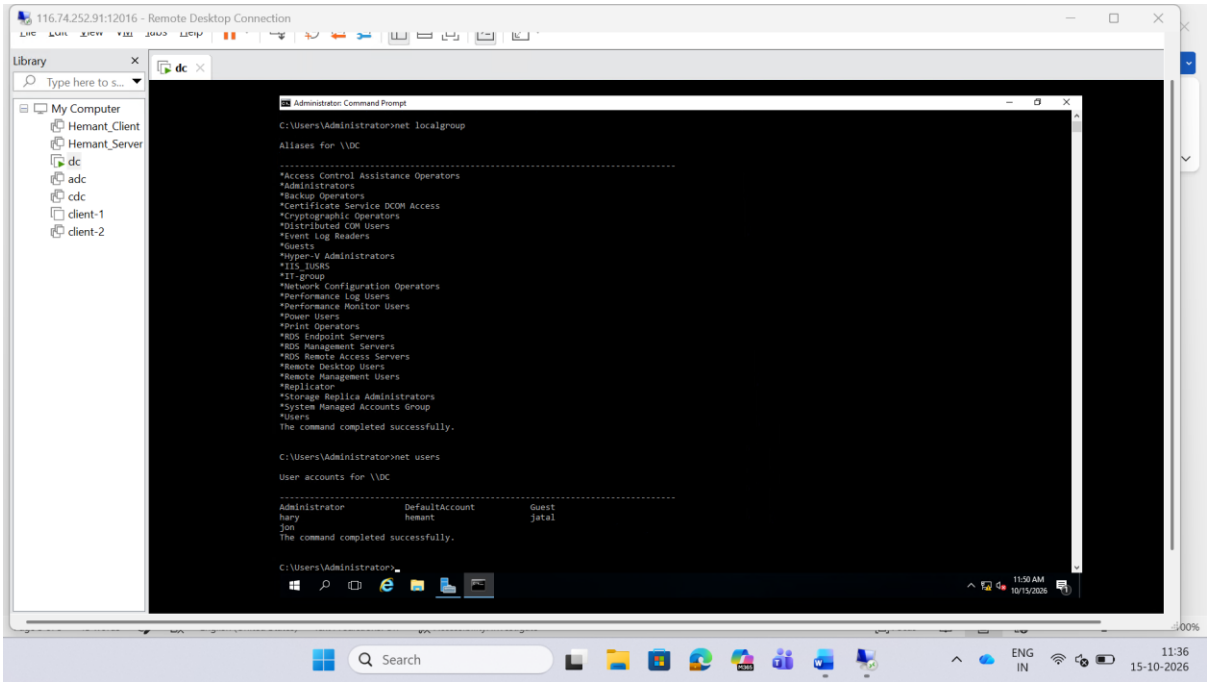


Net localgroup: shows the list of groups



Basic commands

net user to see all the user



net localgroup users	shows the members of the users group
net user mary * /add	add new user using password
net user mary /add	add new user using password
net user mary *	to reset the pwd of mary
user mery /active:no	to disable the account
user mery /active:yes	to disable the account
cls	to clear screen
net localgroup IT-group mary /add	to add mary to user group mary
net localgroup IT-group /del	to delete the group
net user mary /del	to delete user mary

ADDS theory

ADDS: active directory domain services

A group of services

It allows centralized authentication authorization and accounting

Uses

1. Software deployment
2. Windows Updates
3. Which user can login/not login
4. Group policy

When you install ADDS it will create 2 Folders

1. NTDS (new technology dir services)
2. SYSVOL (system volume)

NTDS folder contains

1. NTDS database → ntds.dit
2. Logs

SYSVOL contains (by default shared folder)

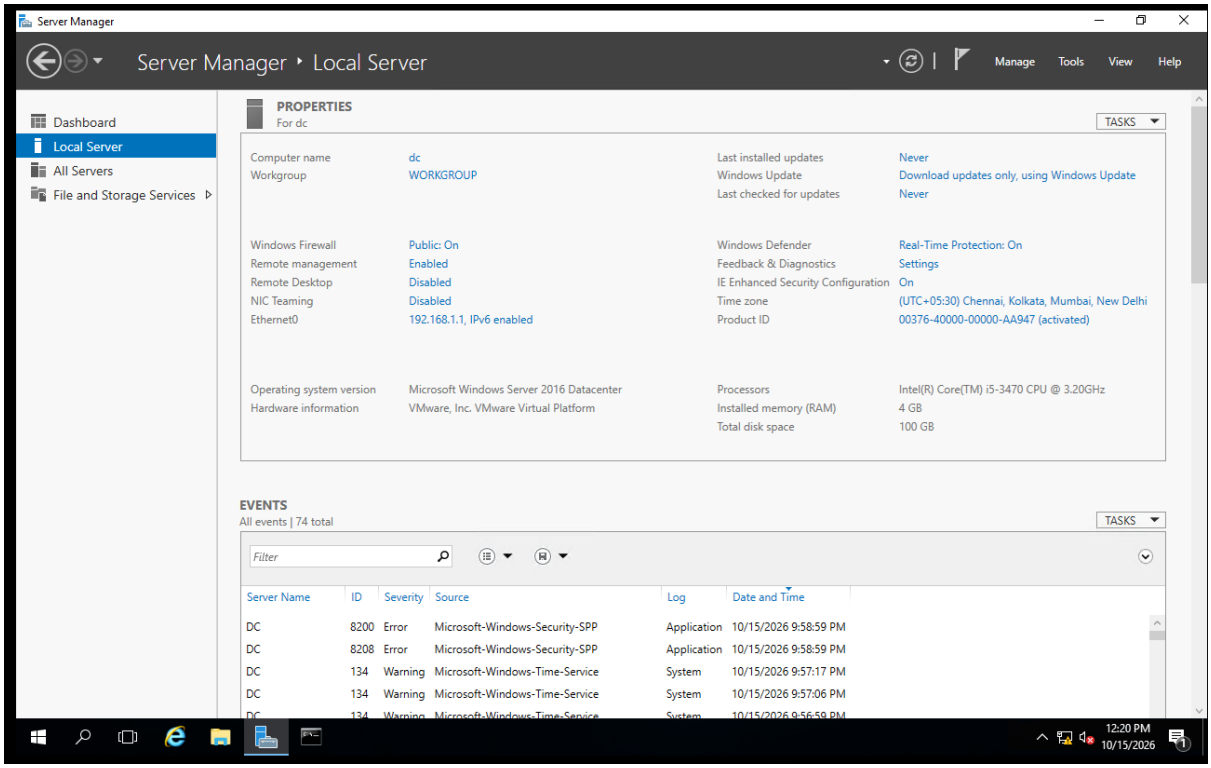
1. Scripts
2. Policies
3. Auth details

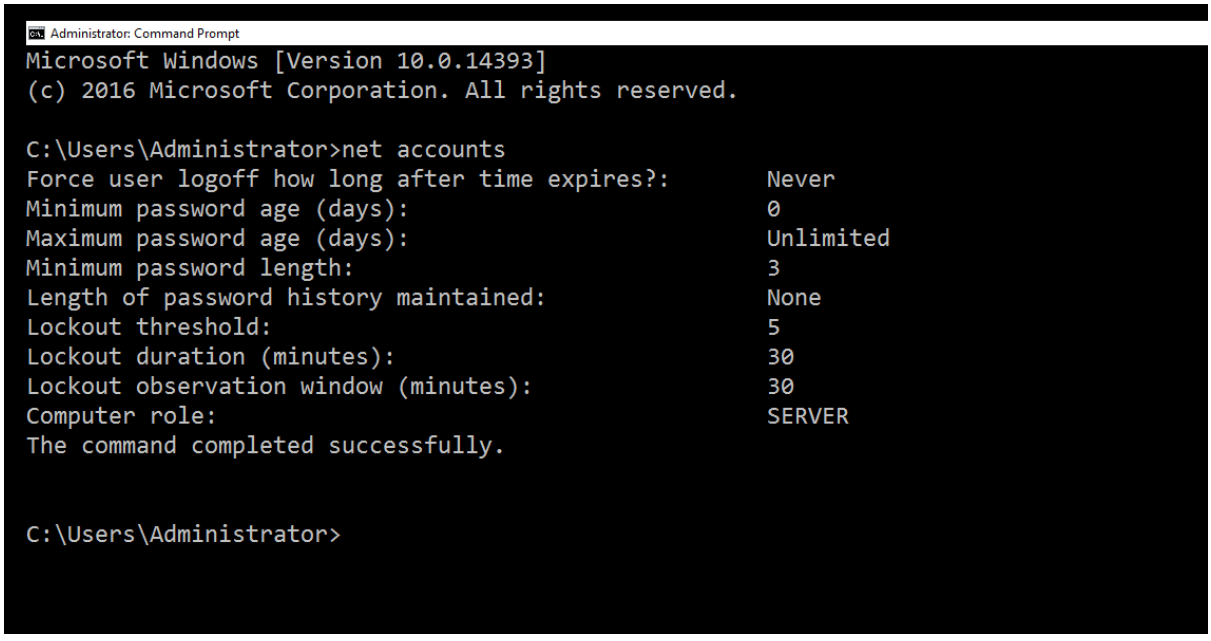
Pre-Requisites for ADDS:

1. Server OS
2. Should have static IP
3. Administrator login (strong pswd) min 7 Char complex pswd

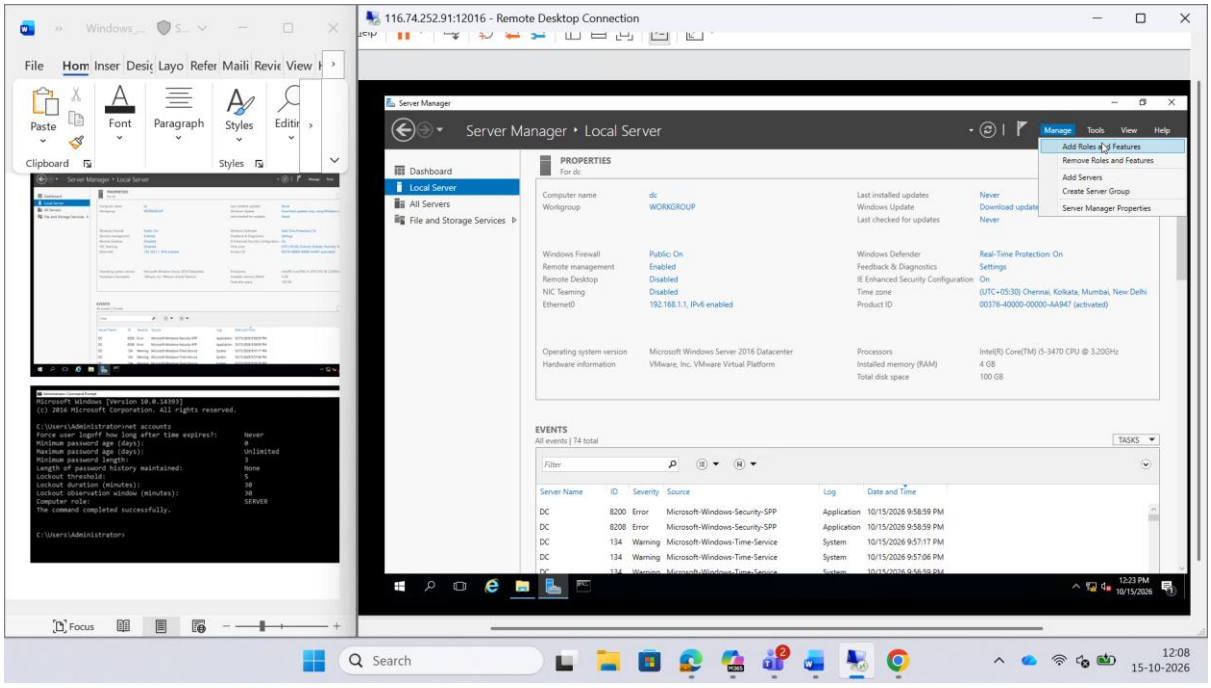
Install ADDS and configuration of ADDS

Needs IP (check the IP)

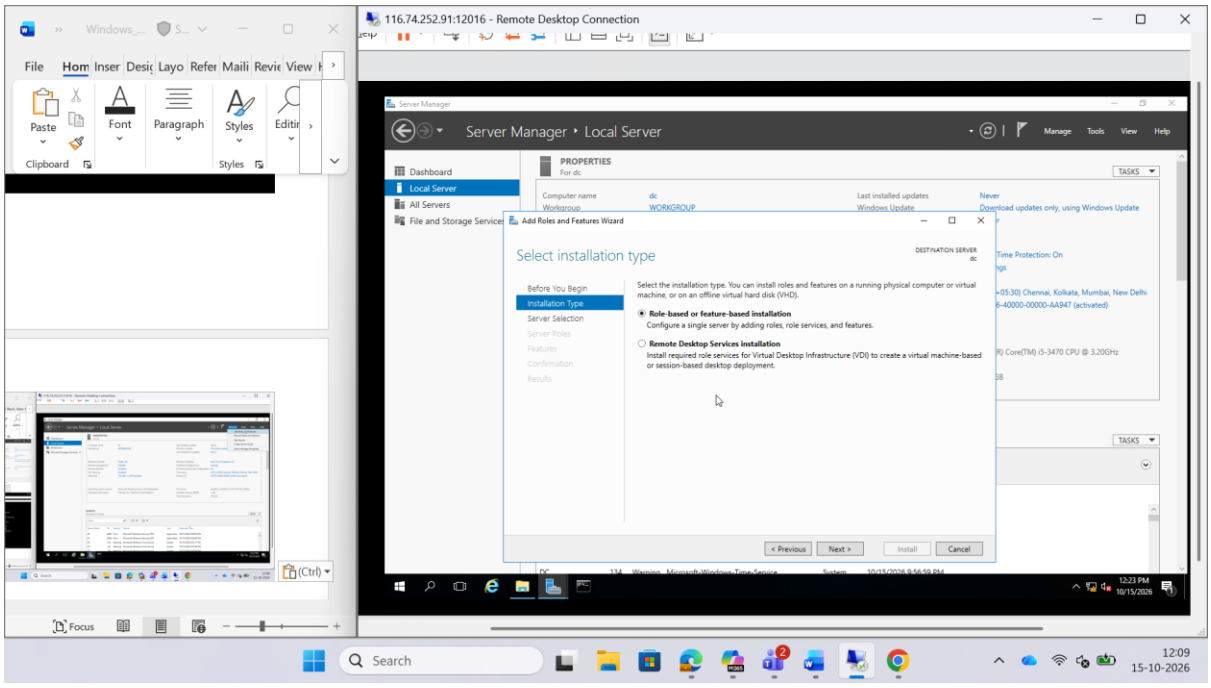




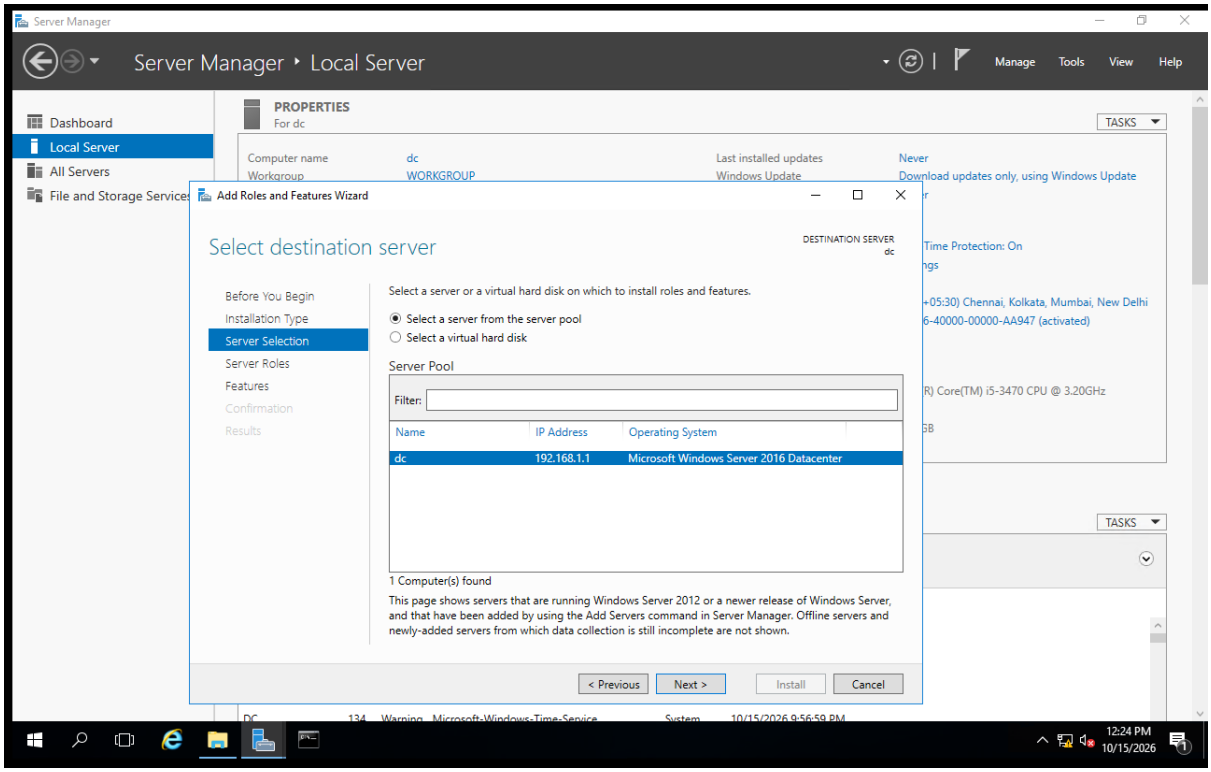
To open installation window



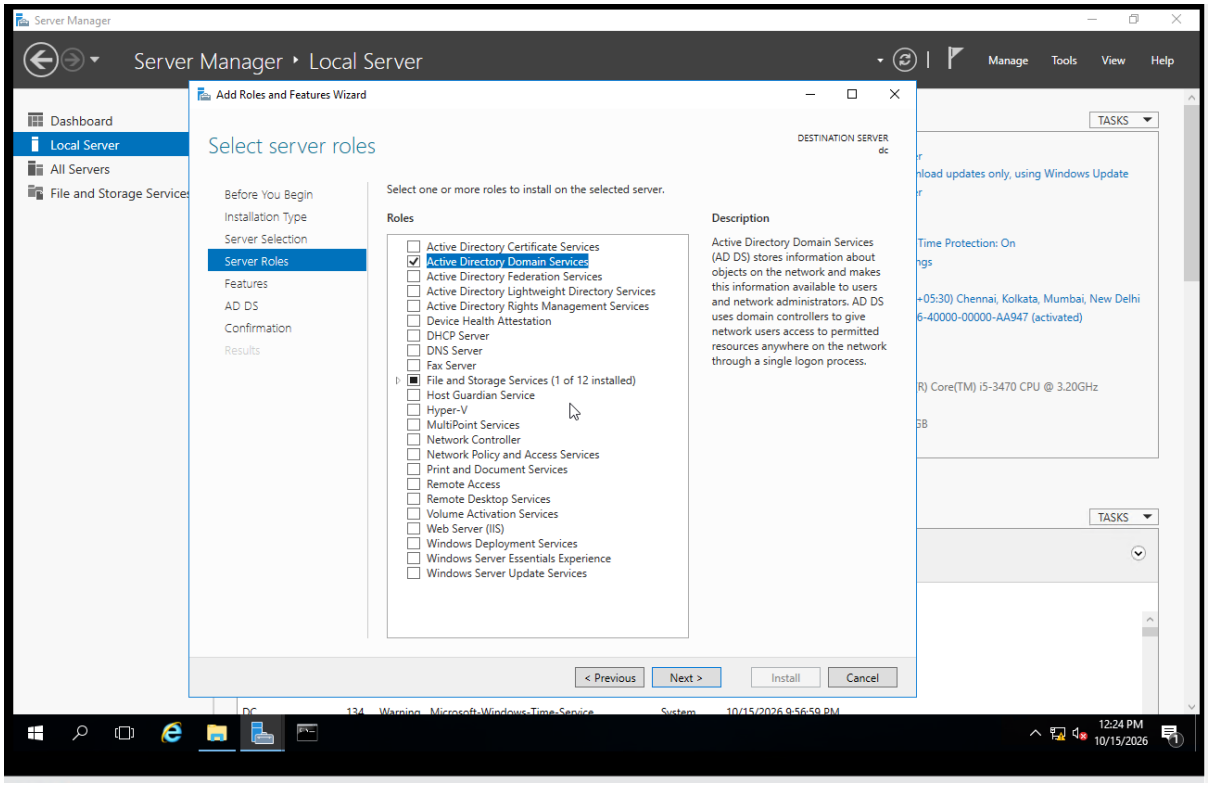
Main install windows

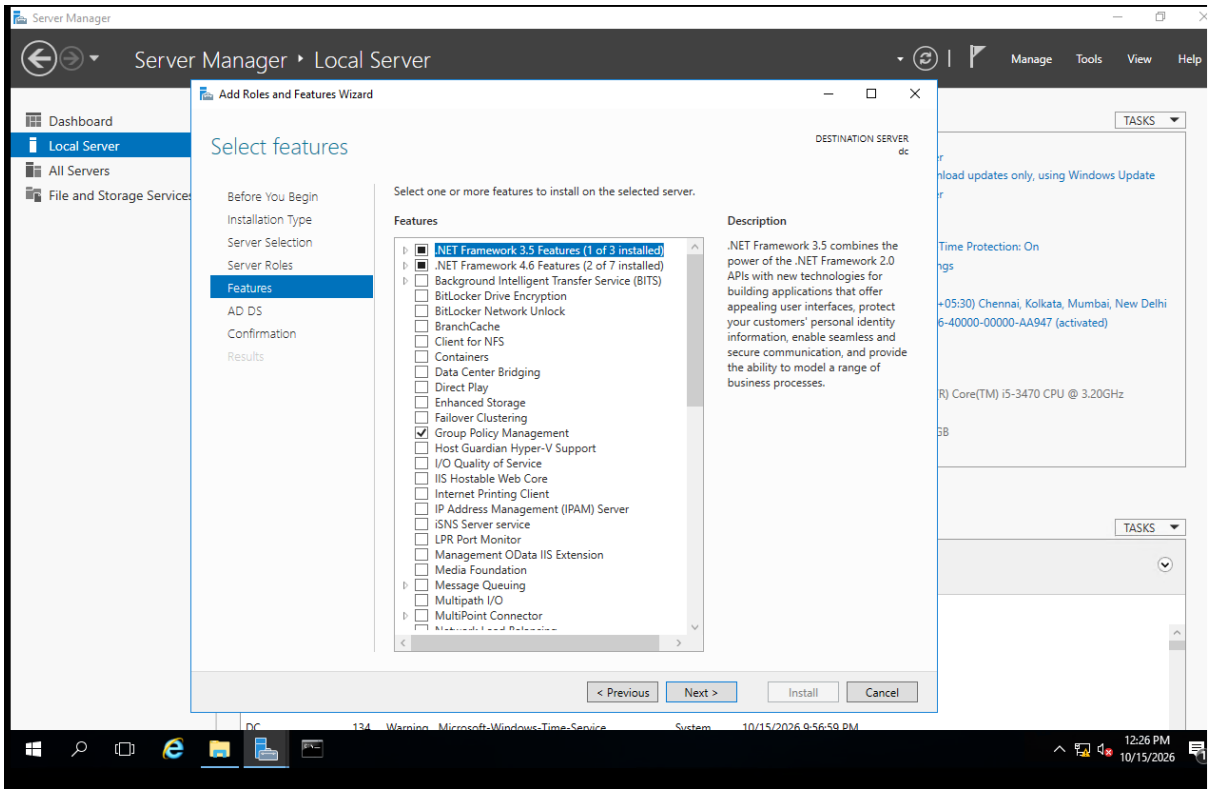


Check if it list your IP

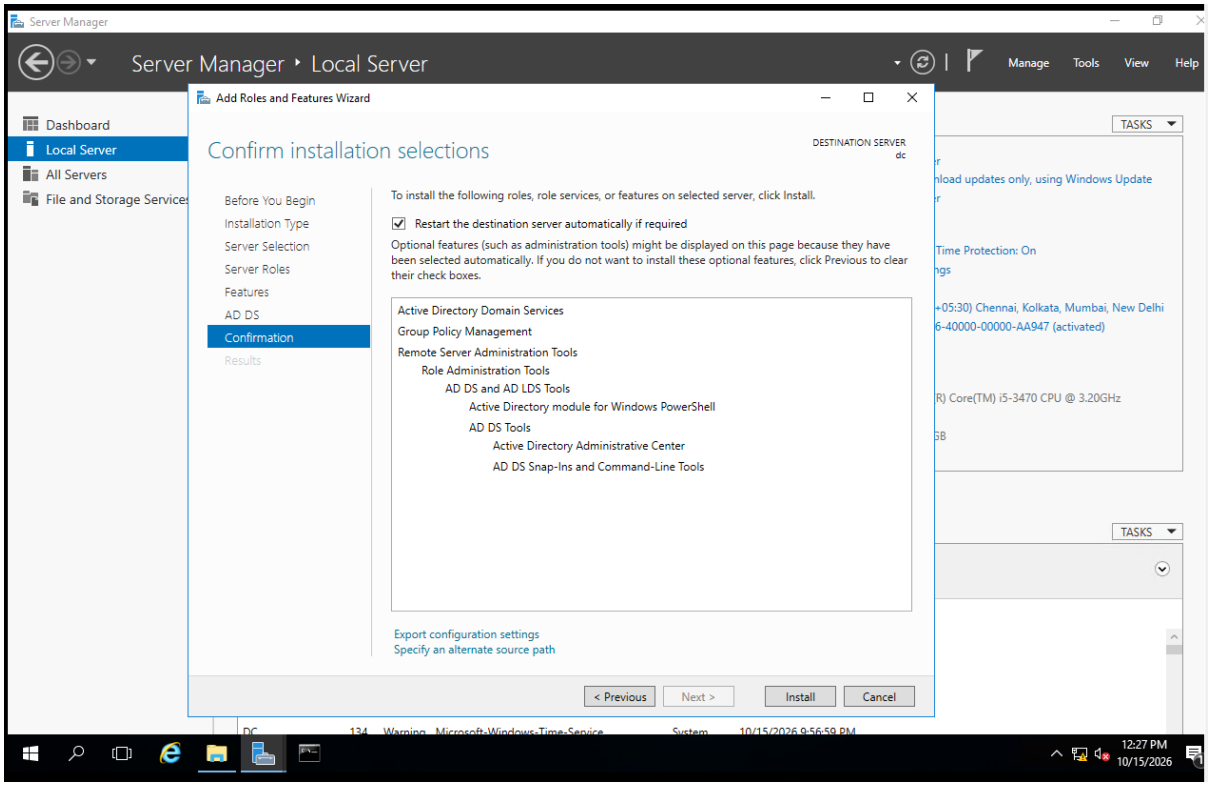


Tick the second that ADDS

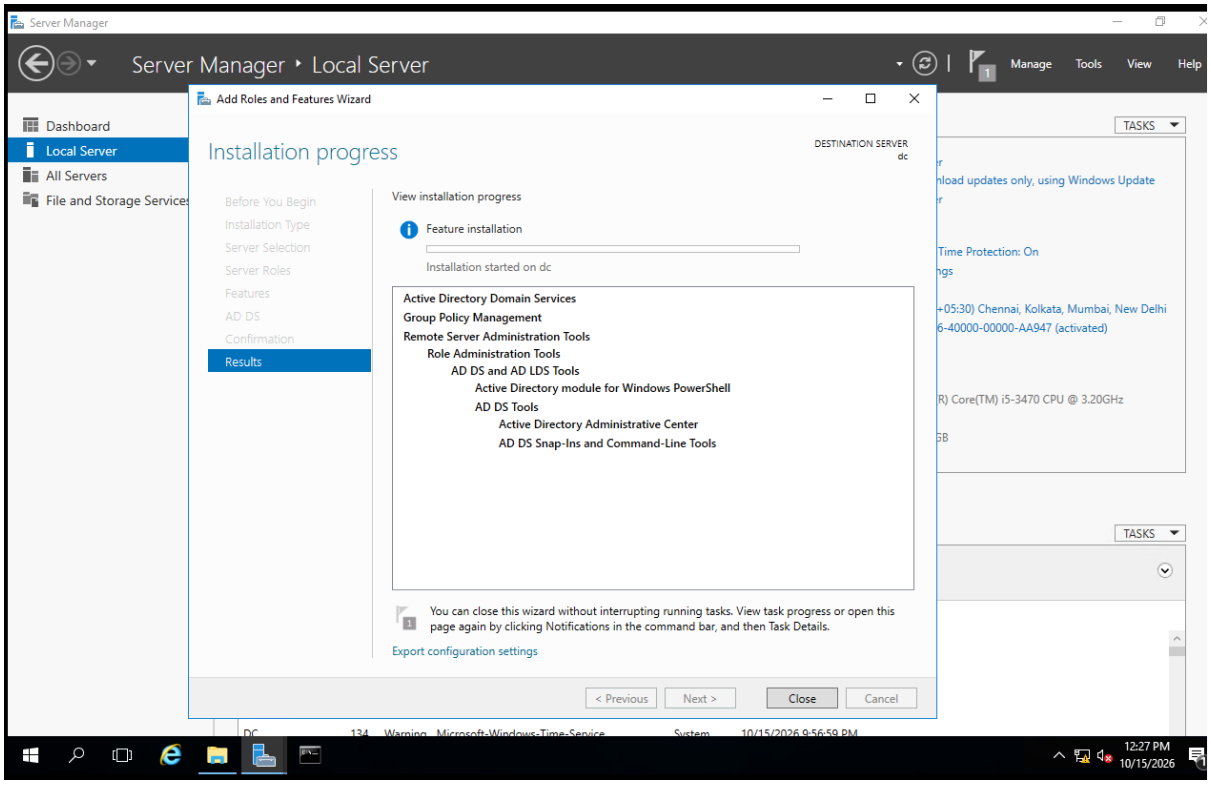




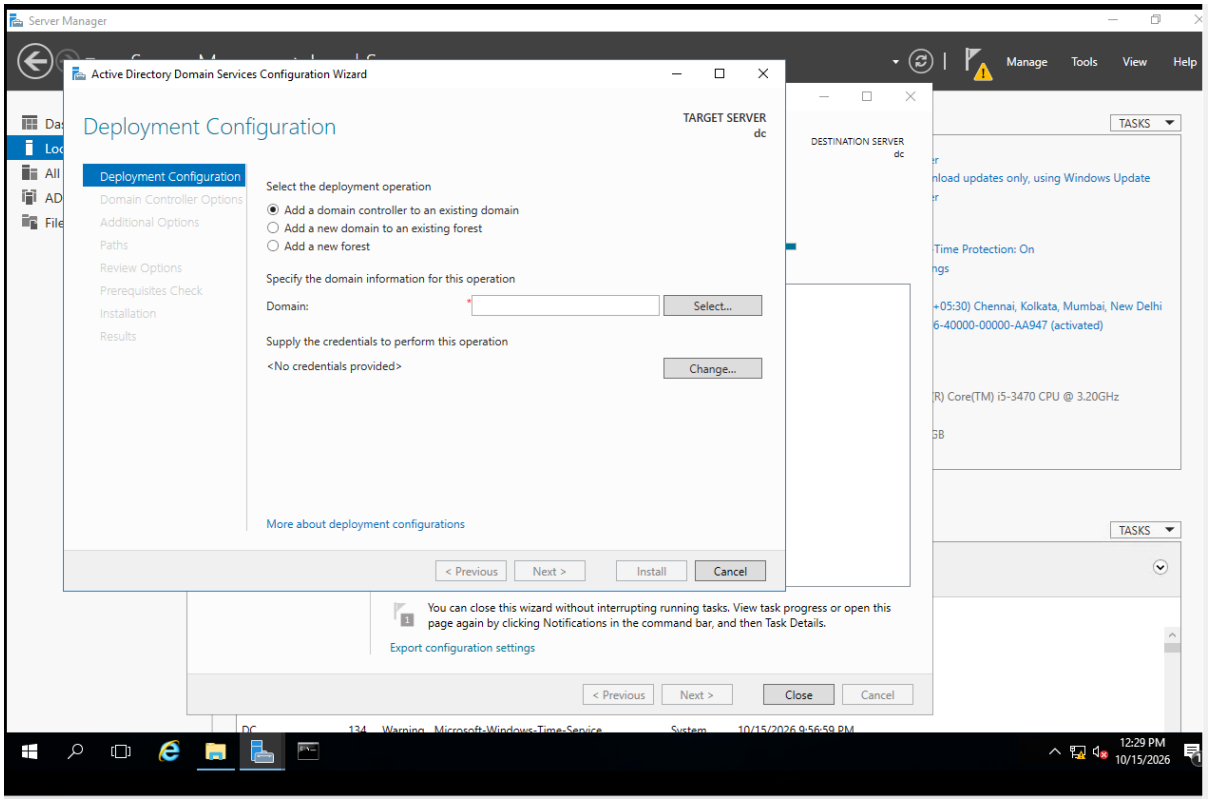
Tick Mark on restart

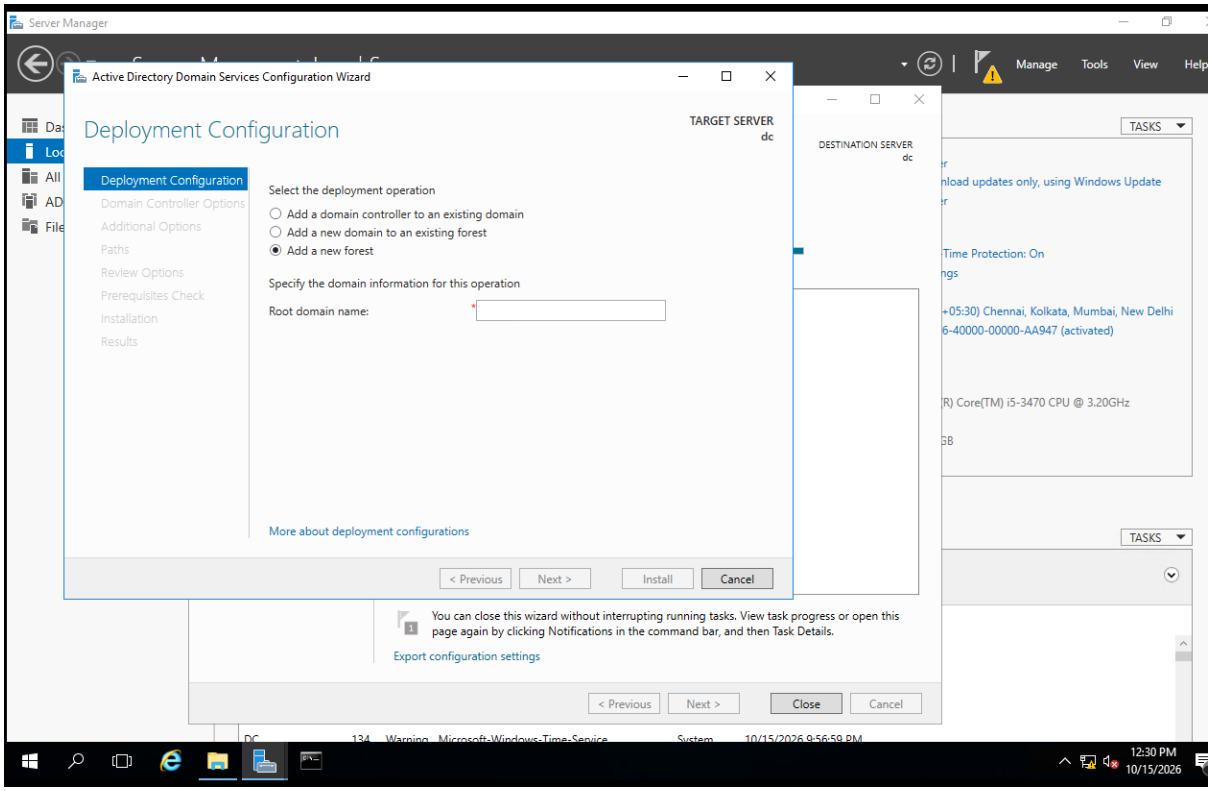


Installation has started

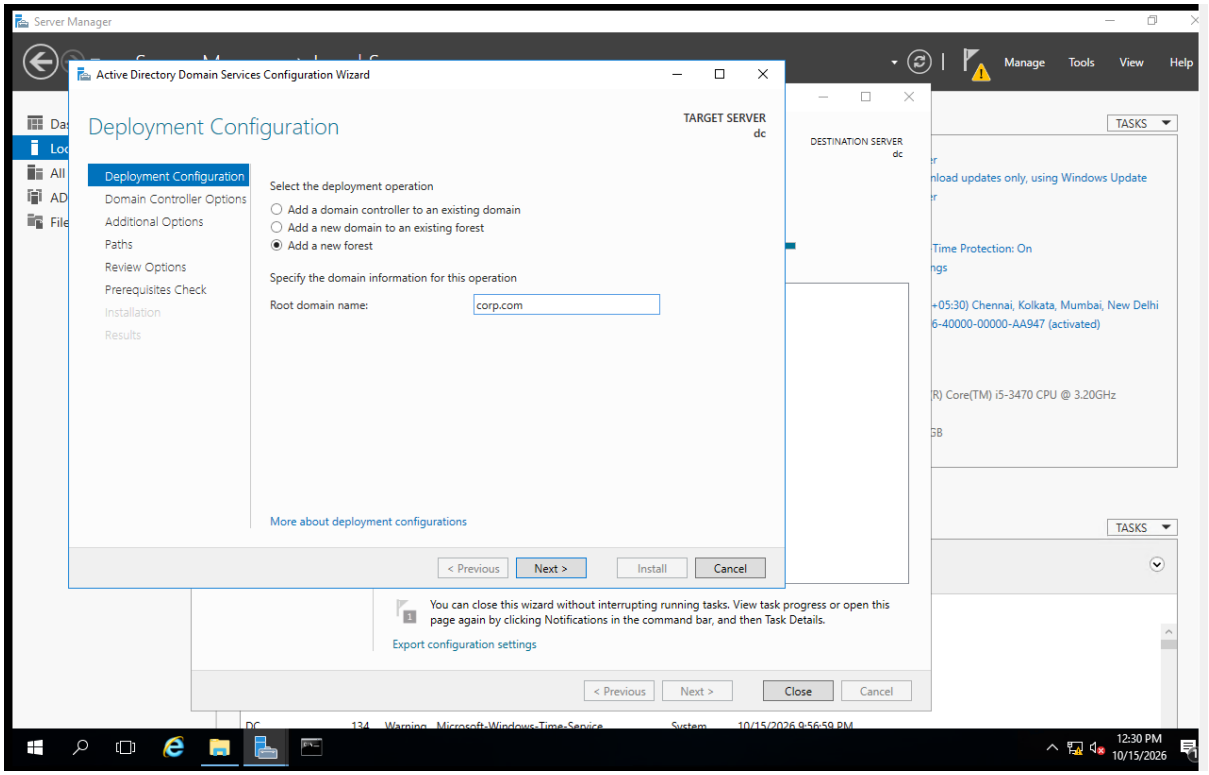


Configuration of ADDS

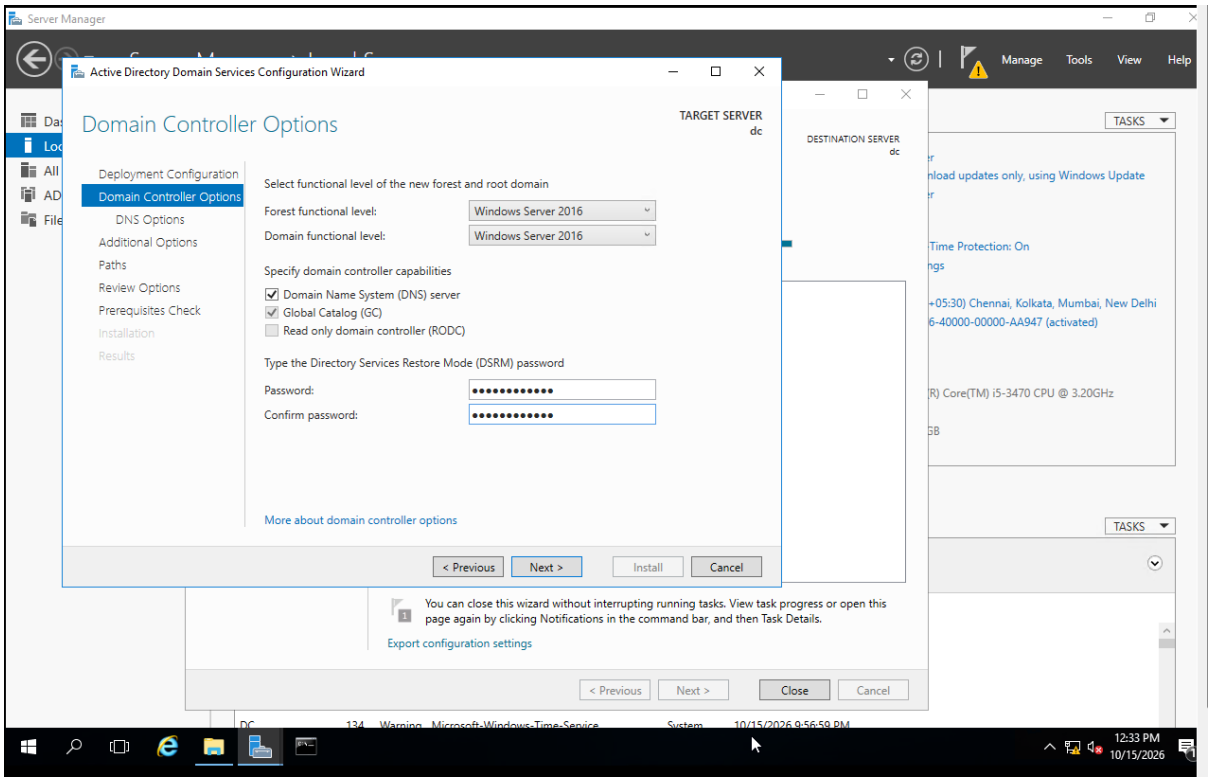




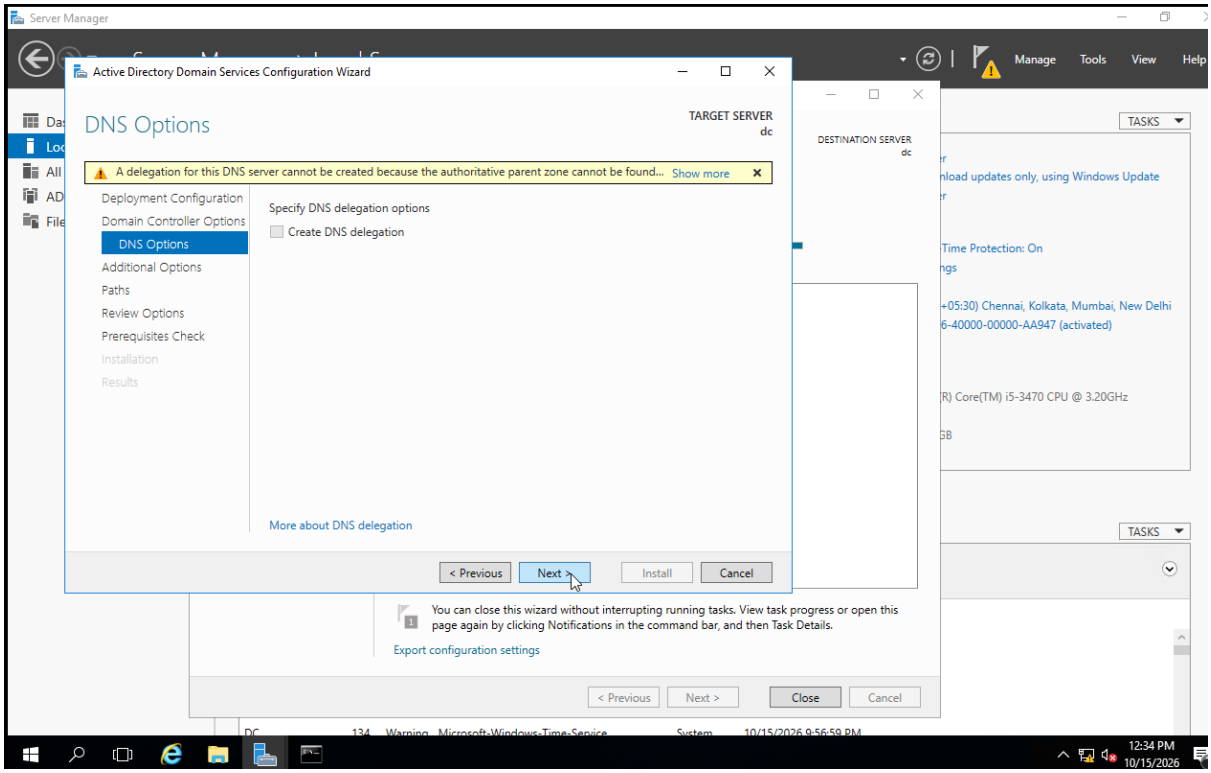
Add domain name (you can give any name)



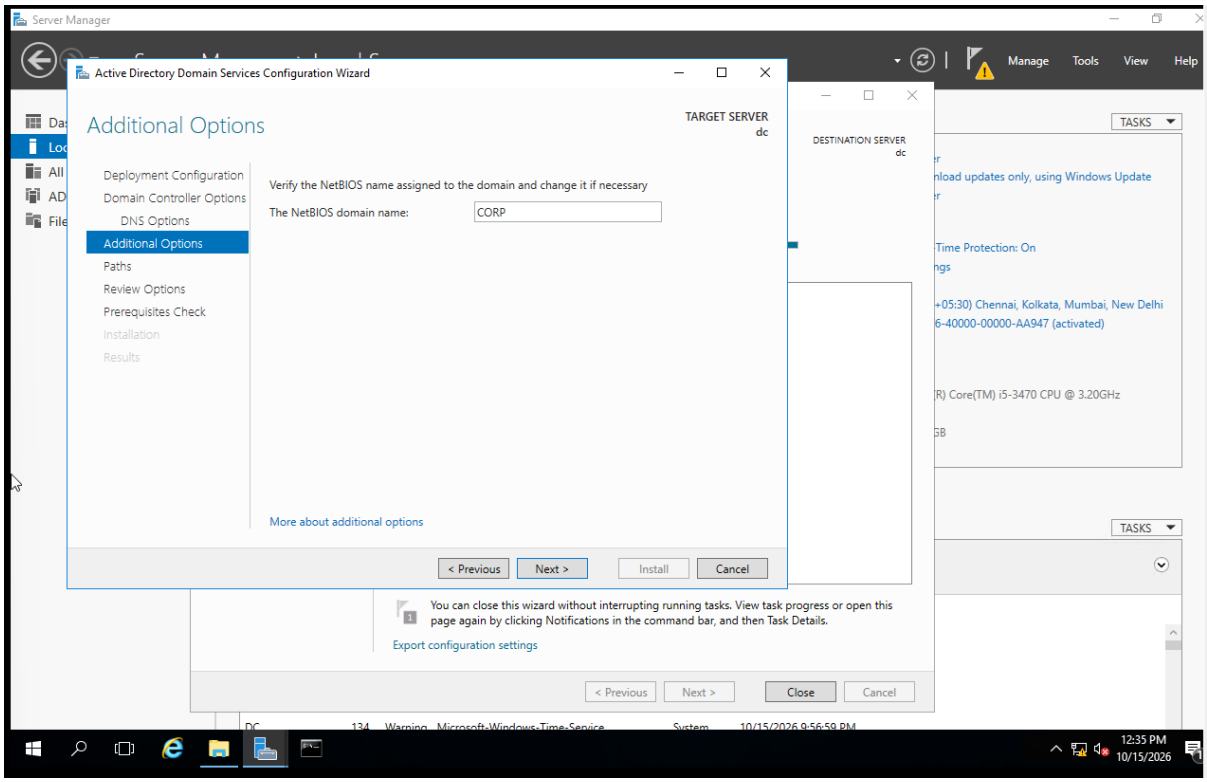
Add recovery password



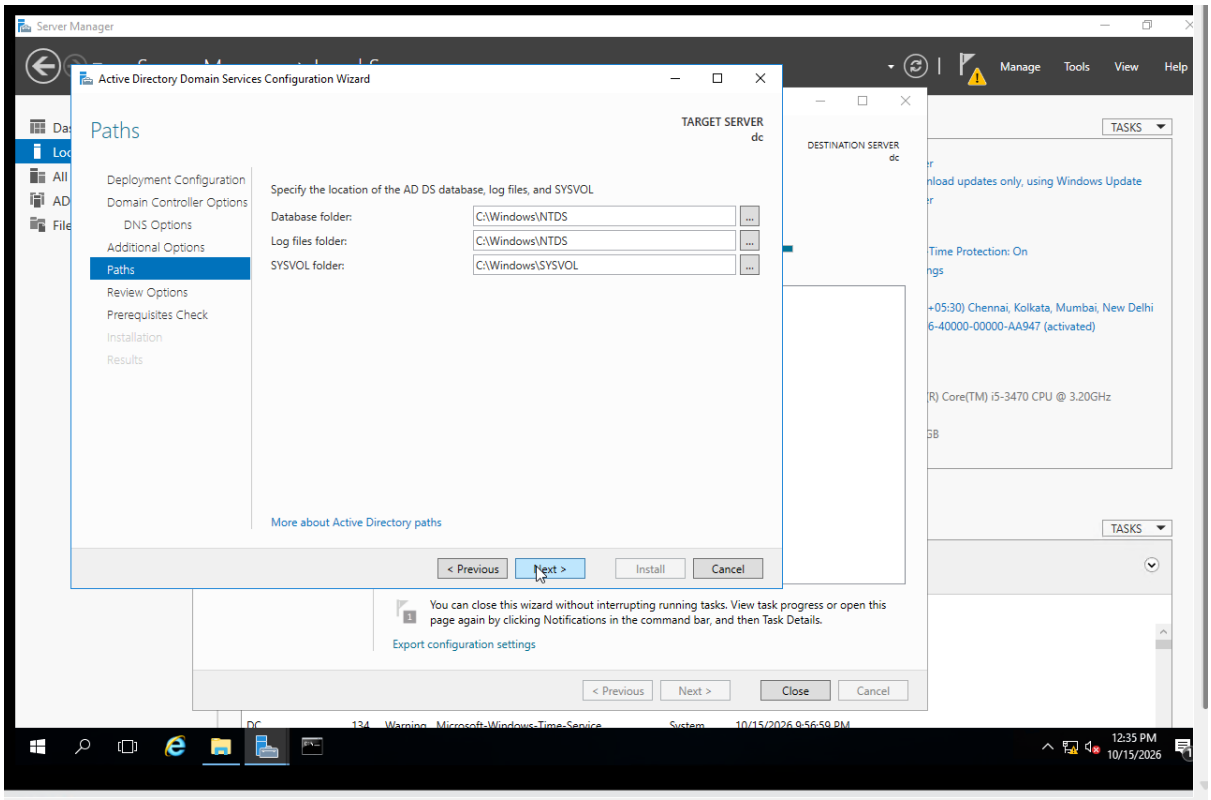
Ignore the error



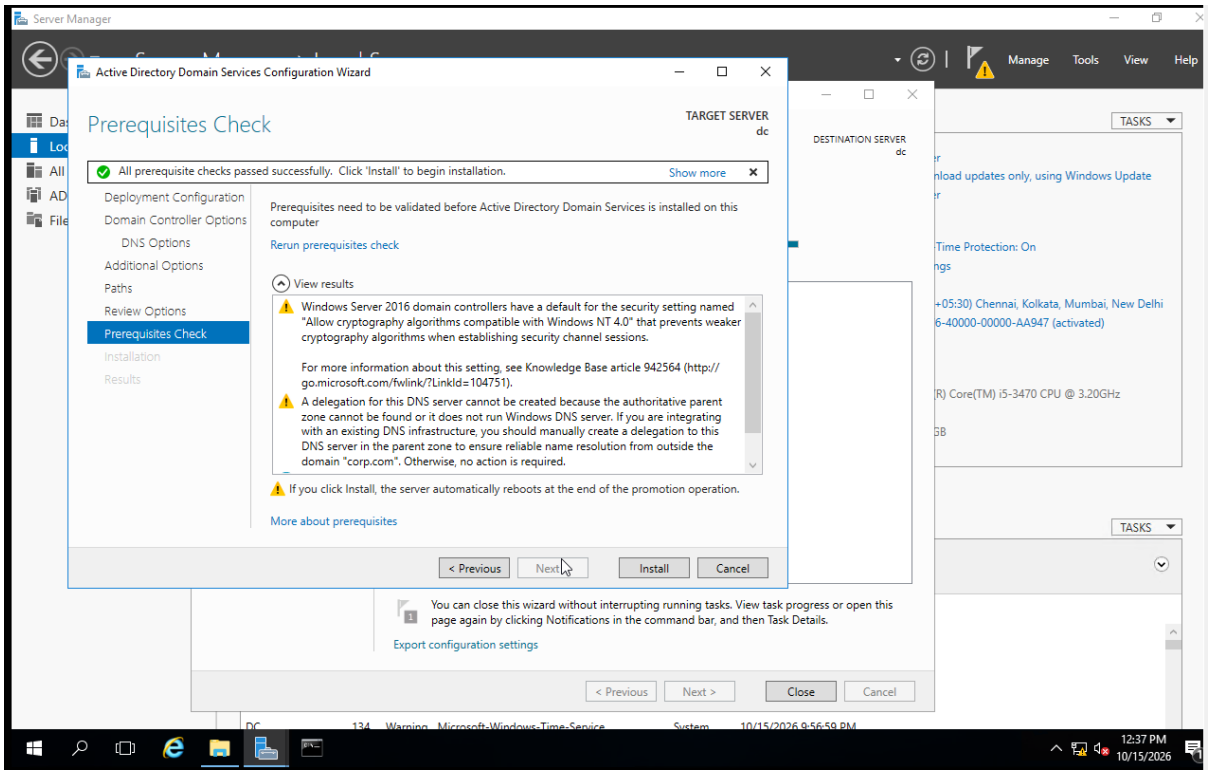
CORP should automatically come



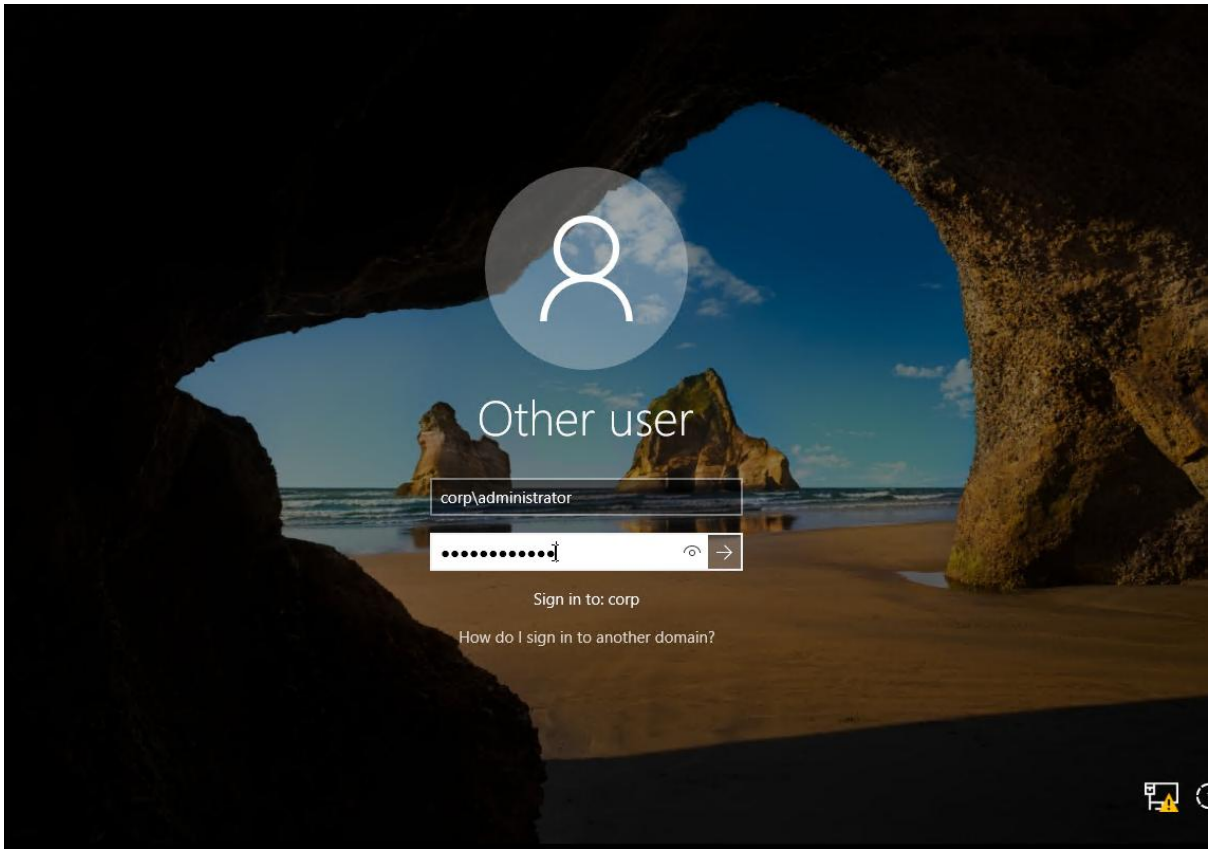
Its Creates 2 folders



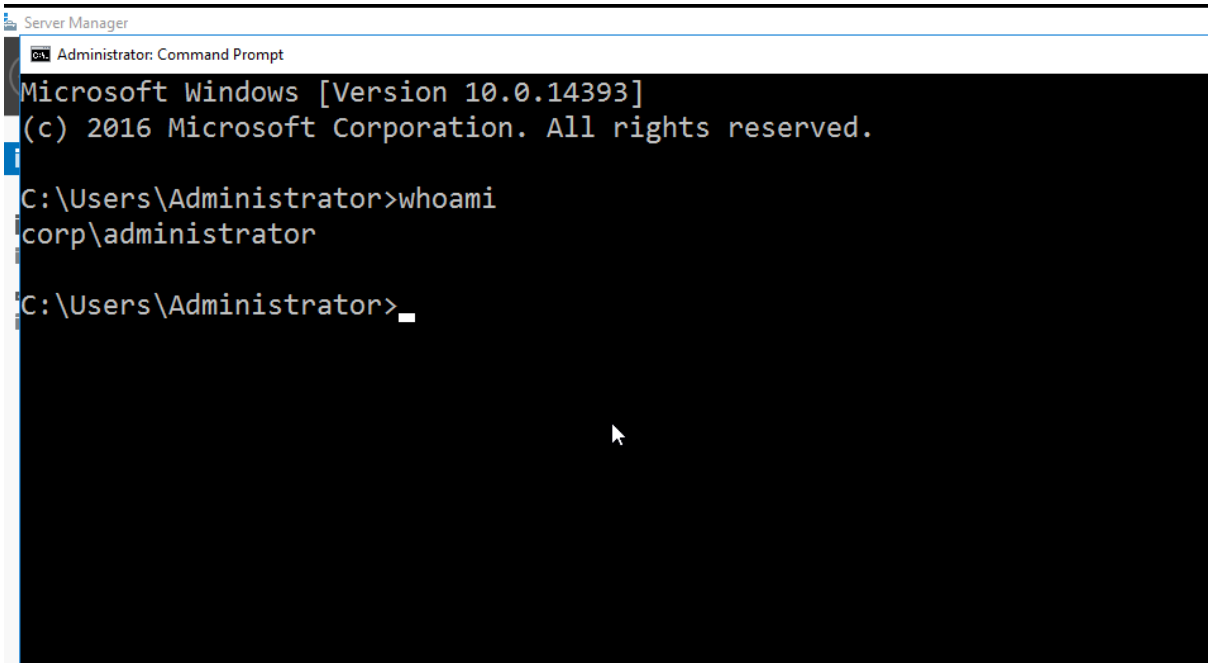
You should have green tick in pre-requisites and start installation.



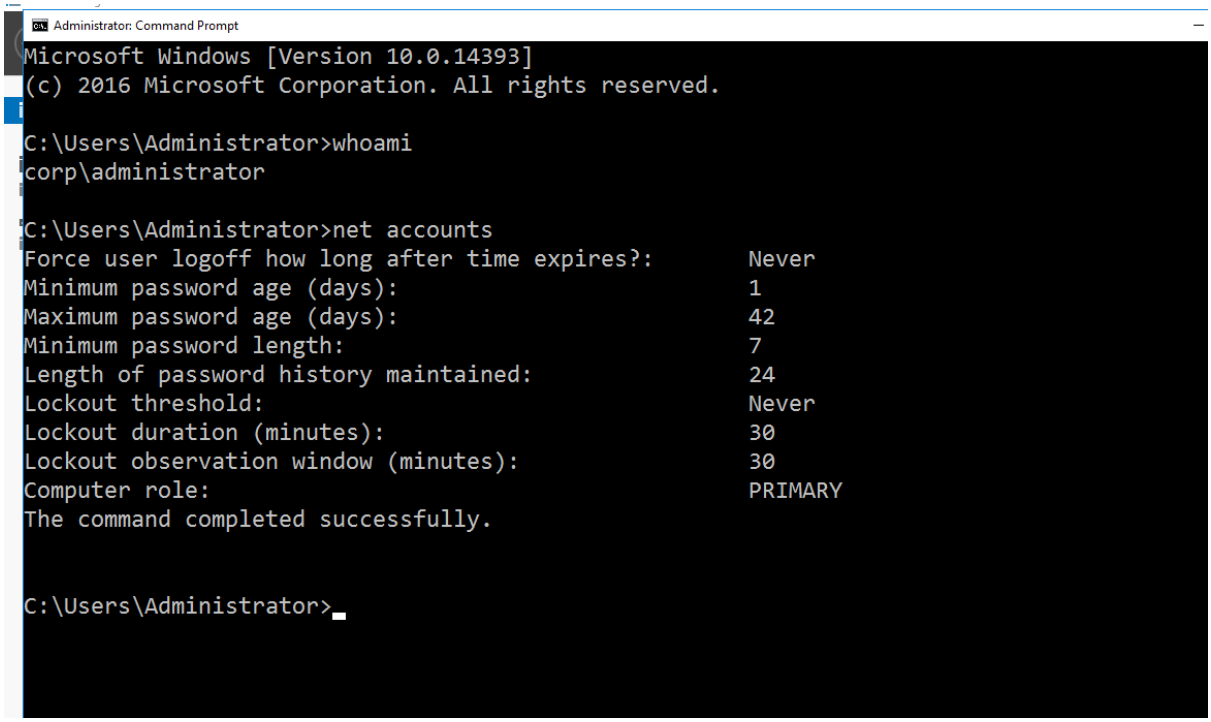
It will restart after that enter following ID



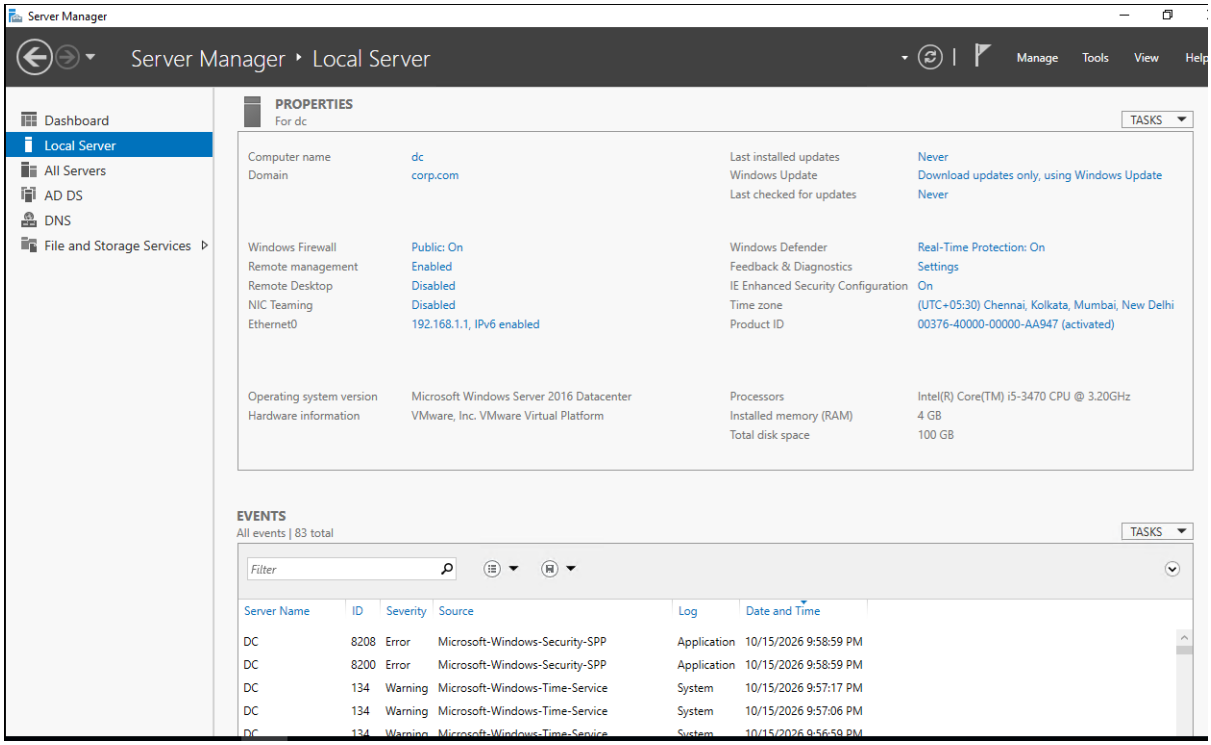
To check if setup has done successfully



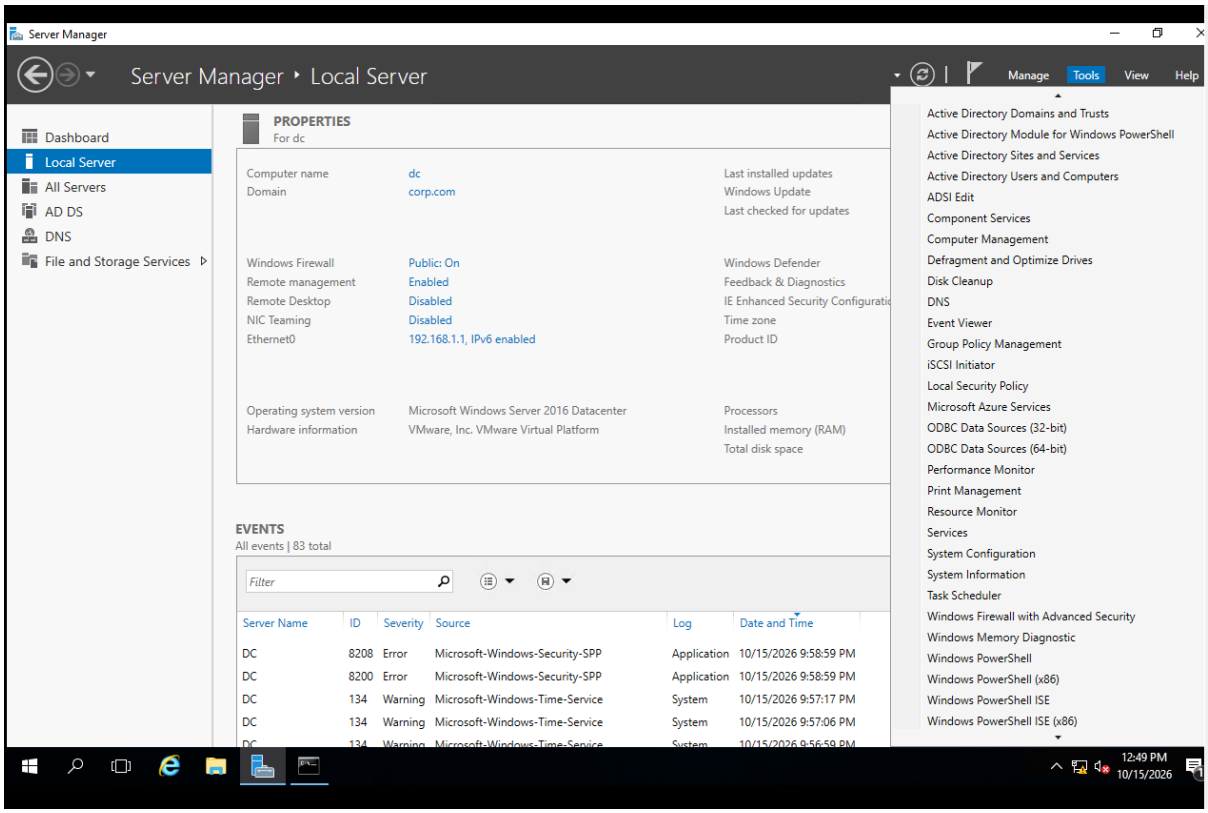
First it was showing server now it shows Primary in last row



Domain will be changed to corp.com and AD DS menu added in side bar



New options are added in Tools section



User and group creation in ADDS

From now use this folder to create user and groups

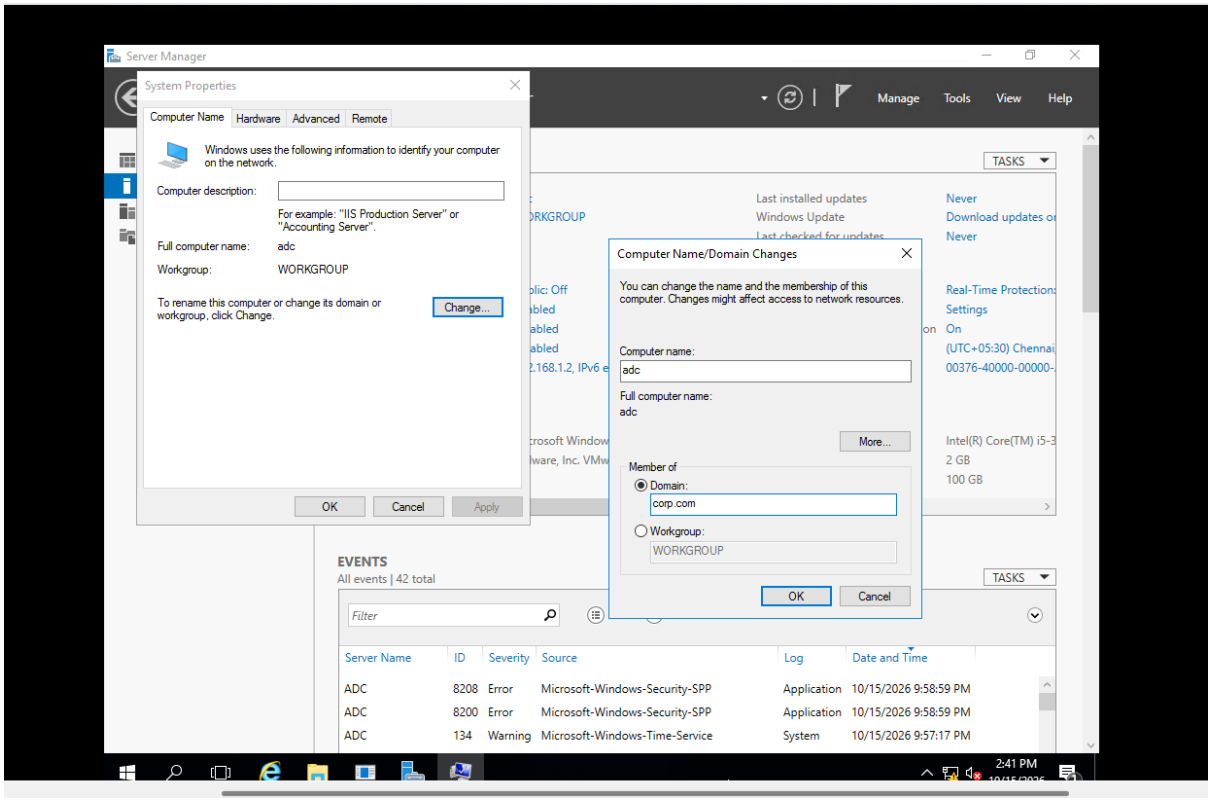
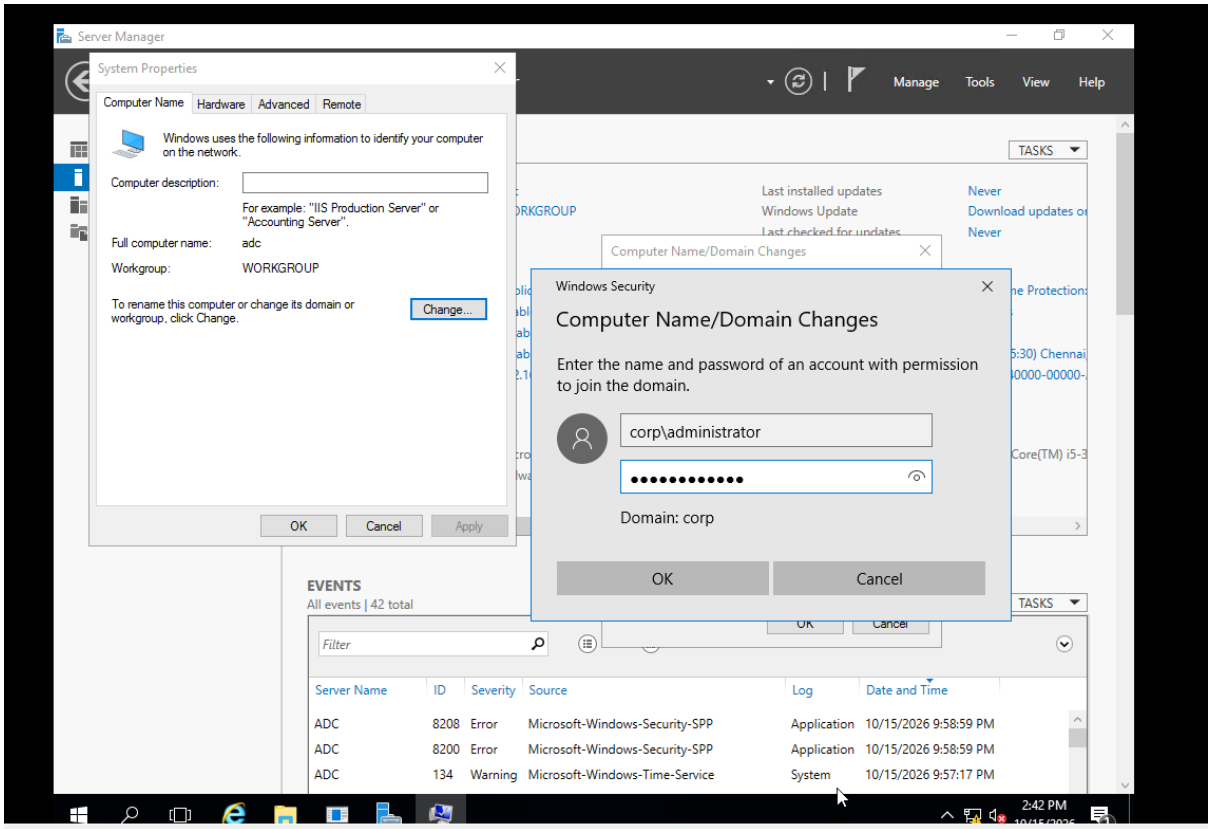
Adding server into corp.com domain

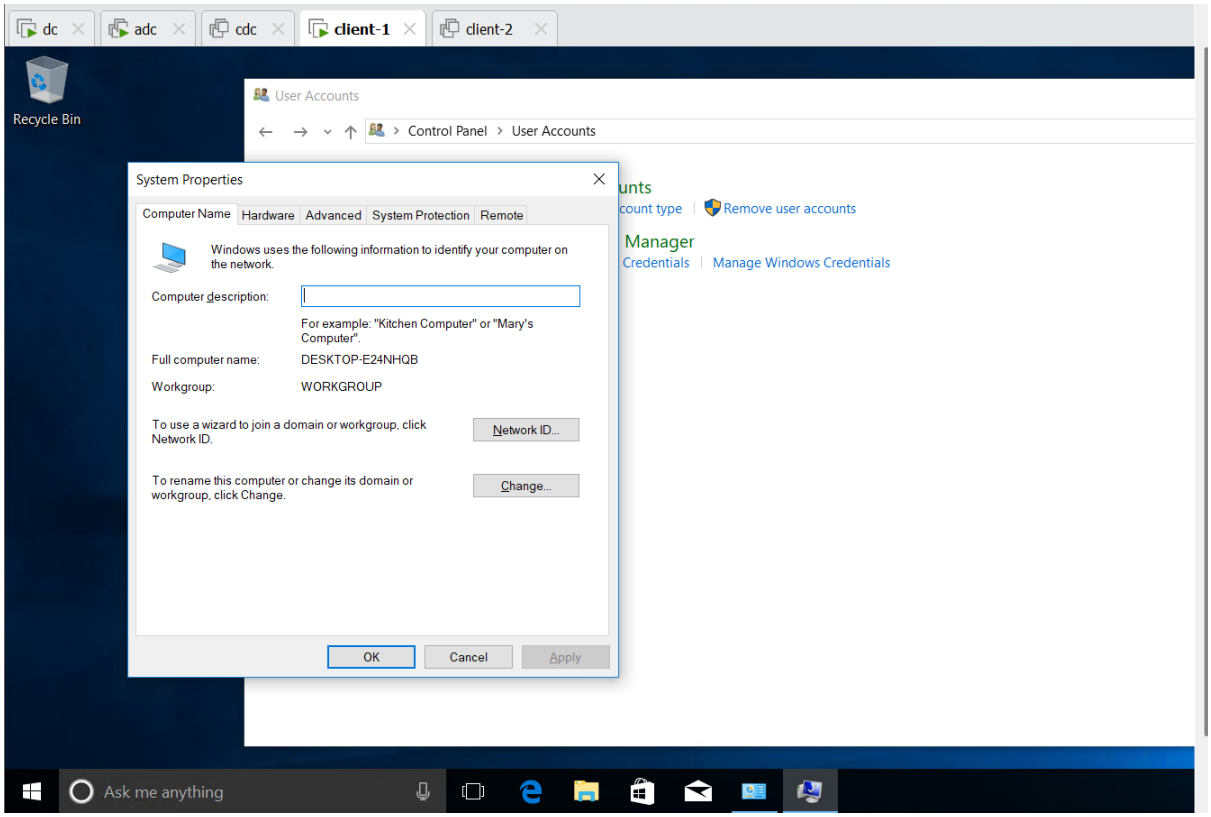
On ADC



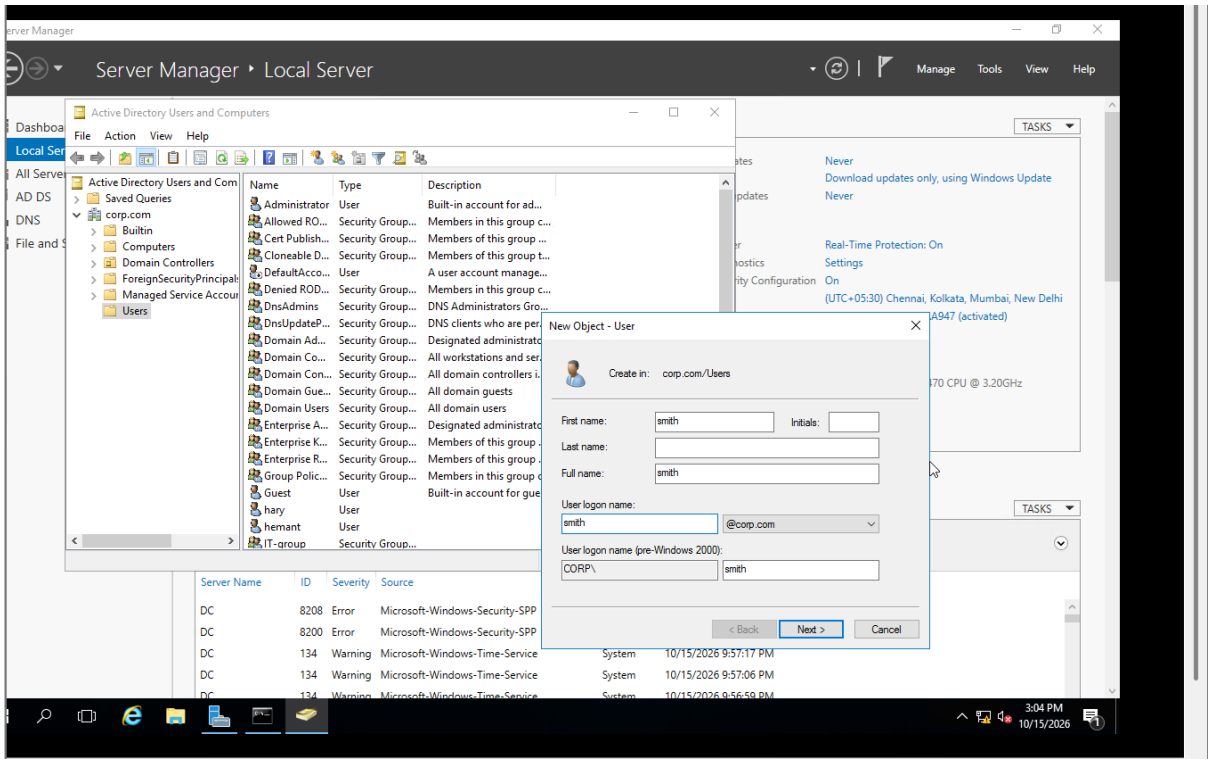


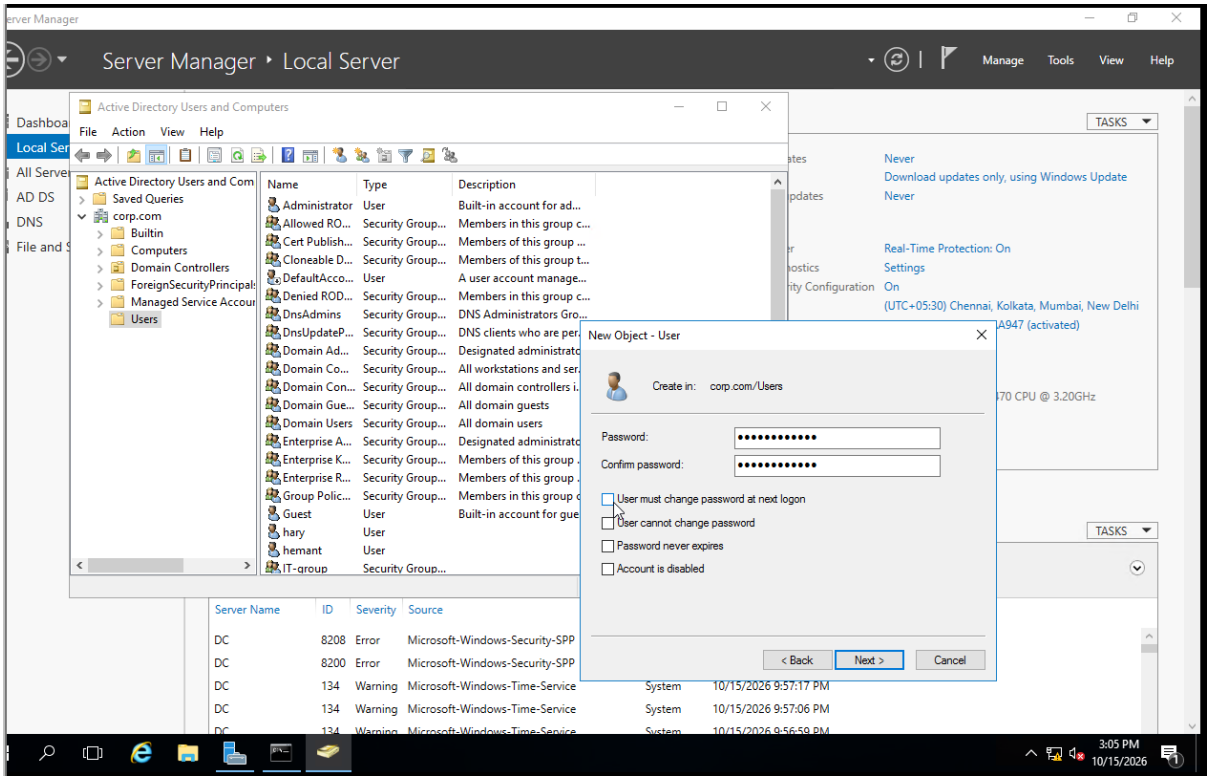
Adding client into corp

Client sysdm.cpl



In dc create new user

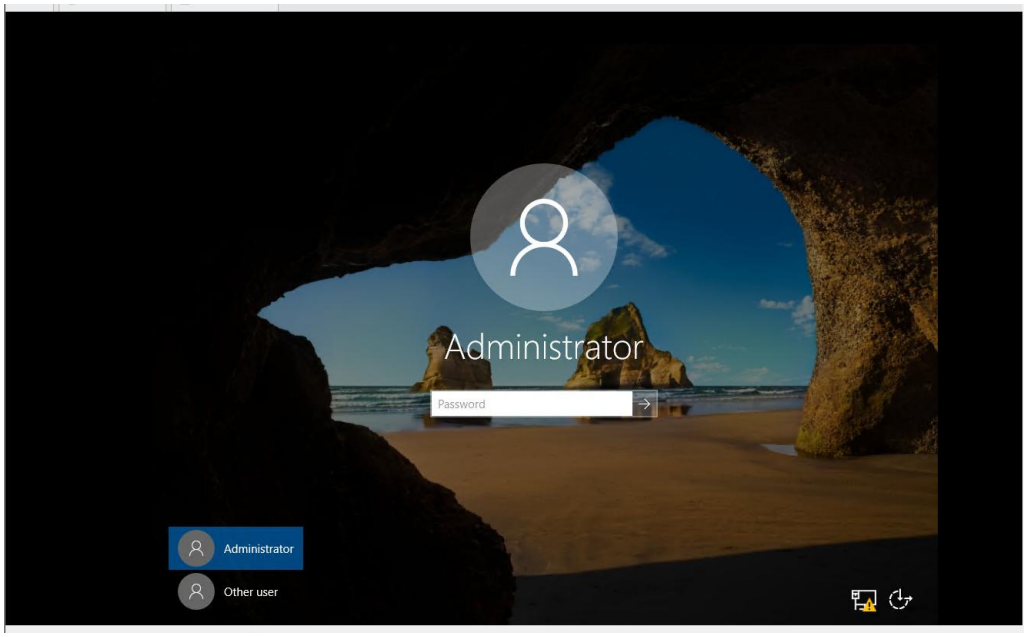




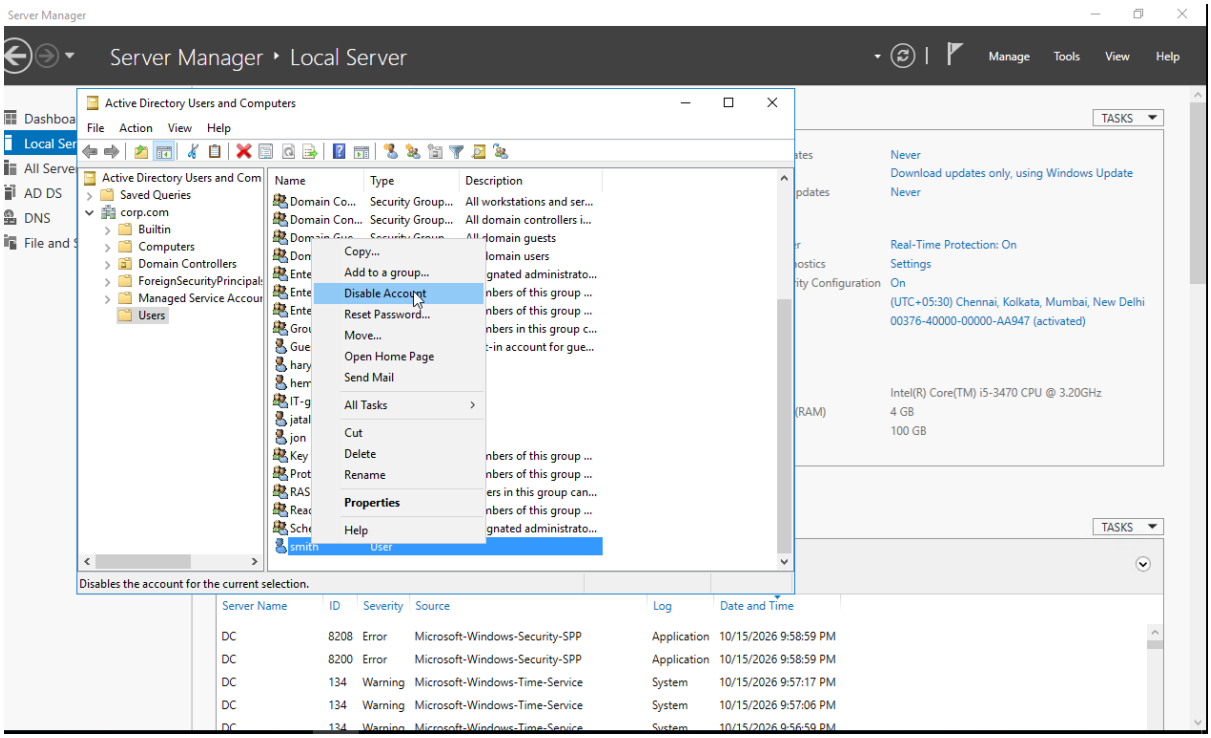
On client pc

Can login with

smith@corp.com and with passwd which we have set



Disable the account of smith



Set the logon to for user Jon (only one machine client-1)

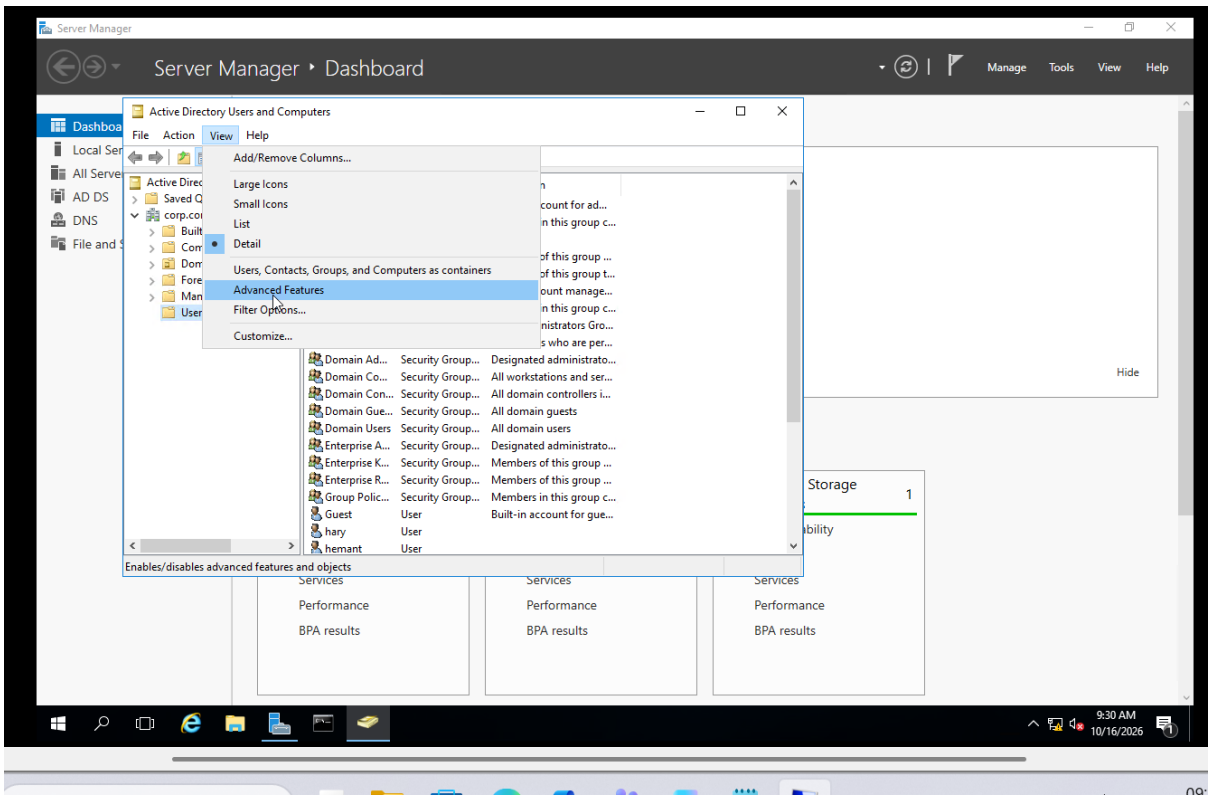
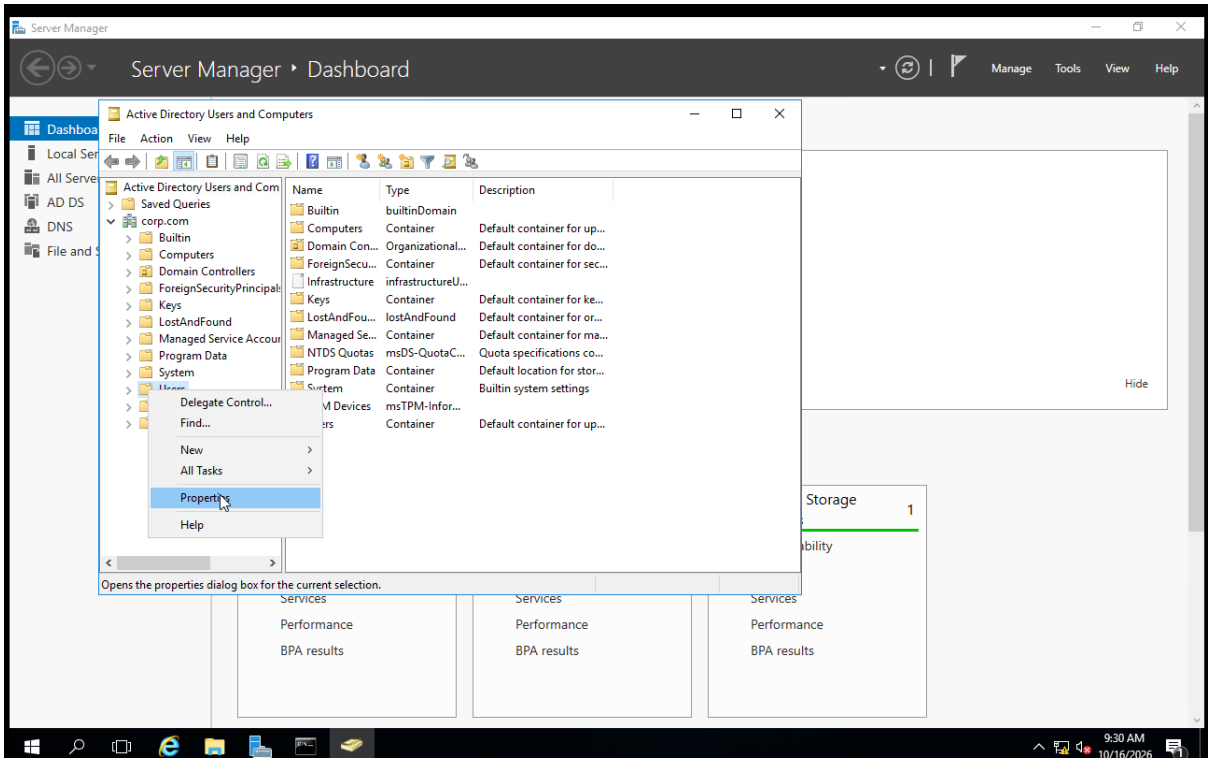
Goto cmd : gpupdate

Remove the Delegate Control

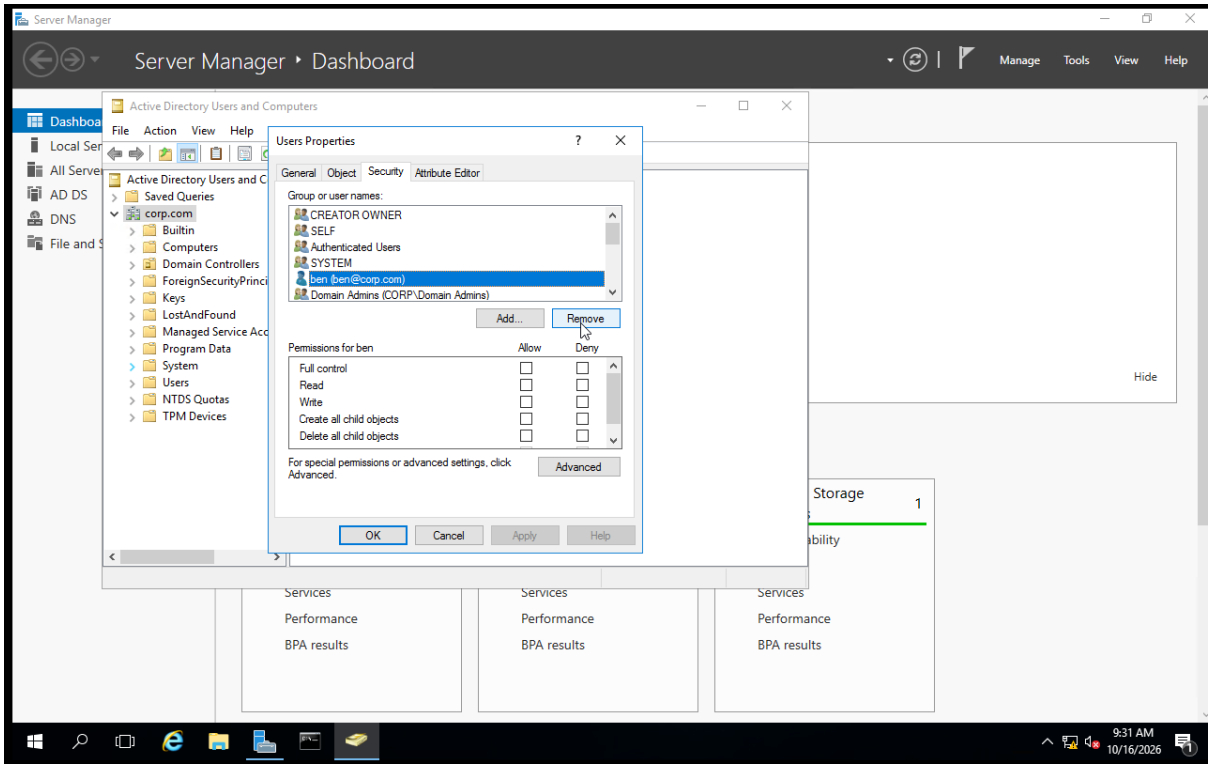
Go to advance



Go to properties



And remove the user that have delegate control



ADDS theory viva

When you install ADDS, it creates 4 logical partitions

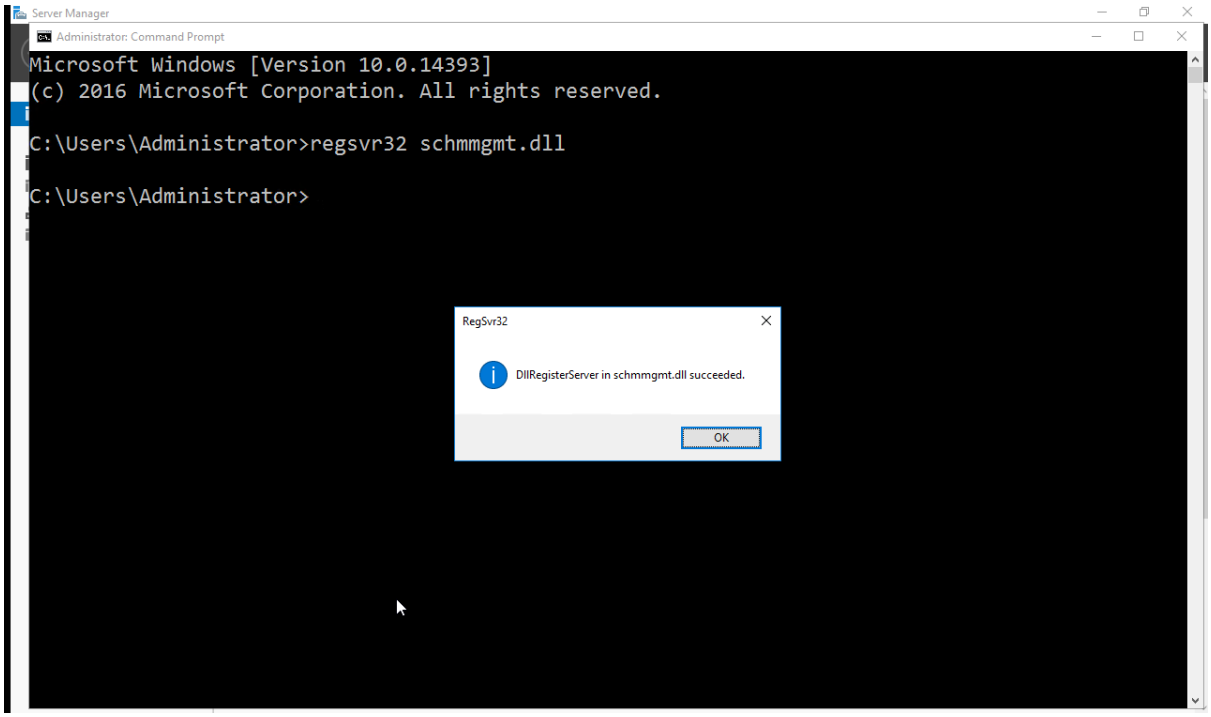
1. Domain: contains AD objects information (users/groups/computer,printer)
2. Schema: A blueprint, skeleton of AD, contains definition of AD objects
3. Configuration
4. Application

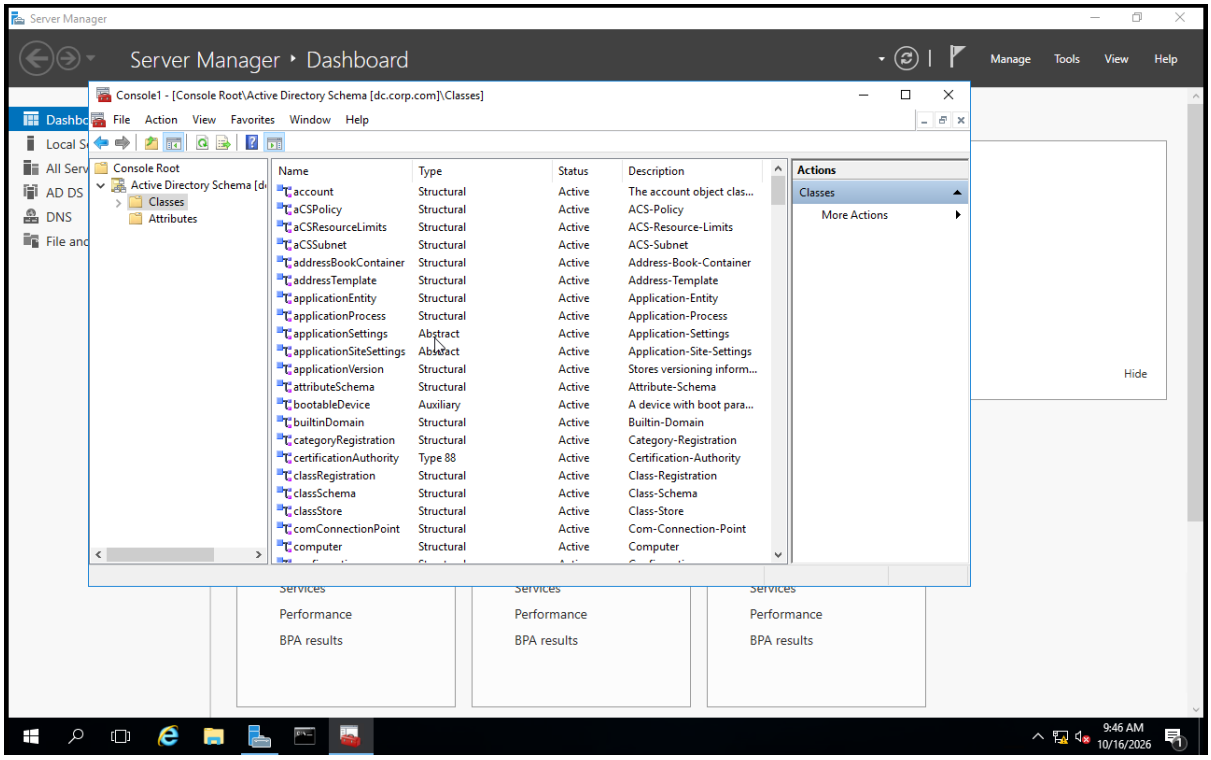
To view schema:

Run – mnc file --- add/remove snaps ins

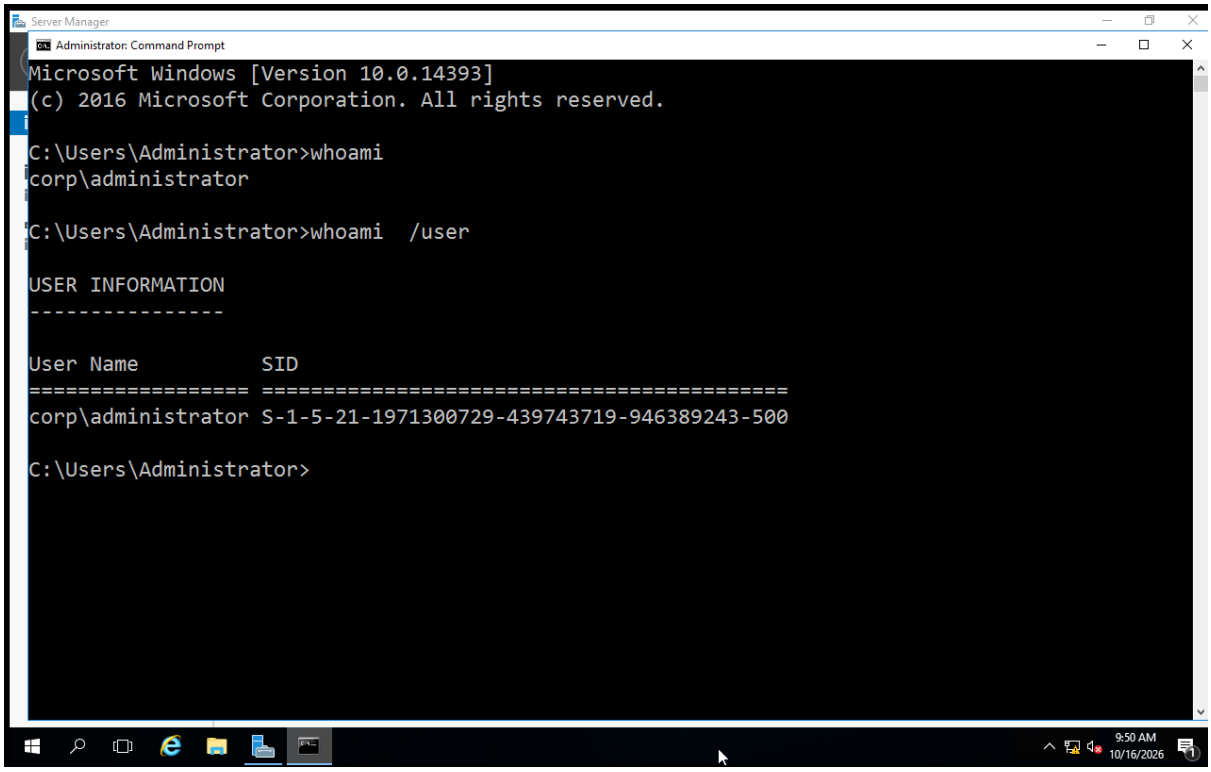
To register schema:

Cmd; regsvr32 schmmgmt.dll





SID → Security identifier Unique ID of an Object



16 oct, 2026

ADDS aspects

Physical

1. Sites

Logical

1. Forest
2. Domain
3. Tree
4. OU

Domain controller: Physical machines that have ADDS installed is a domain controller.

Domian: A Boundary or a range, where the group of objects are bound to follow set of security policies

Child Domain Controller theory

4 types of DC

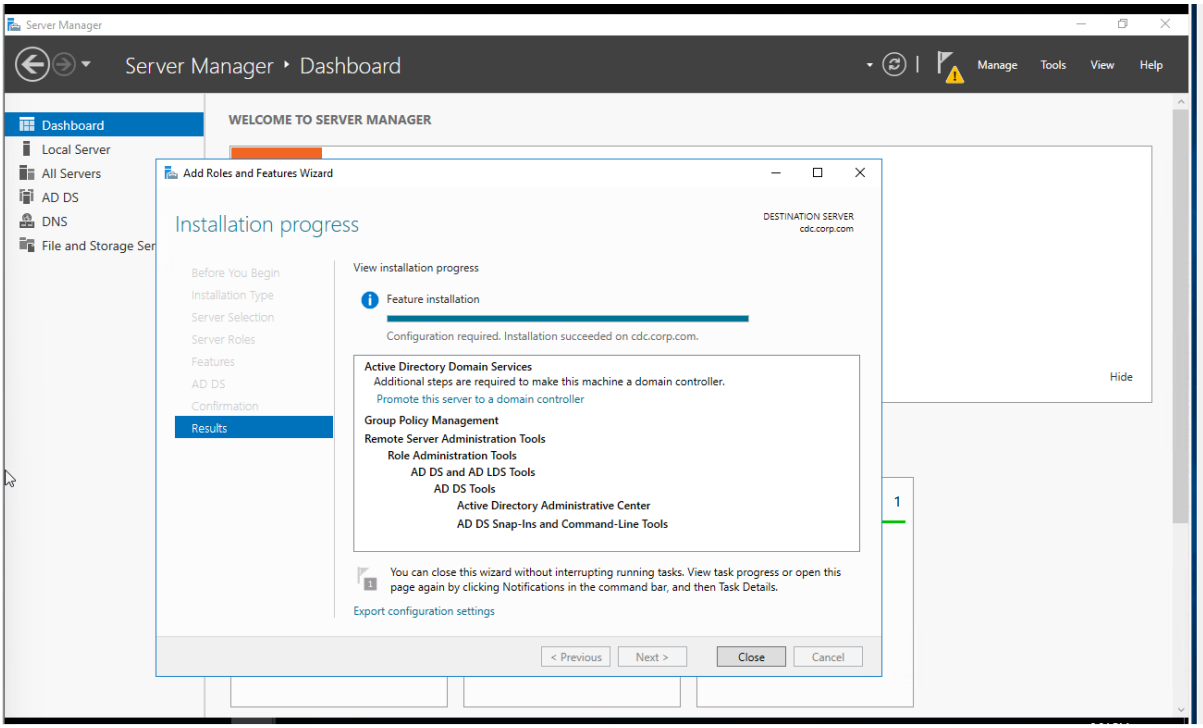
1. Primary DC (PDC)
2. Additional DC/ Backup DC (ADC, BDC)
3. Child DC (CDC)
4. Read only DC (RODC)

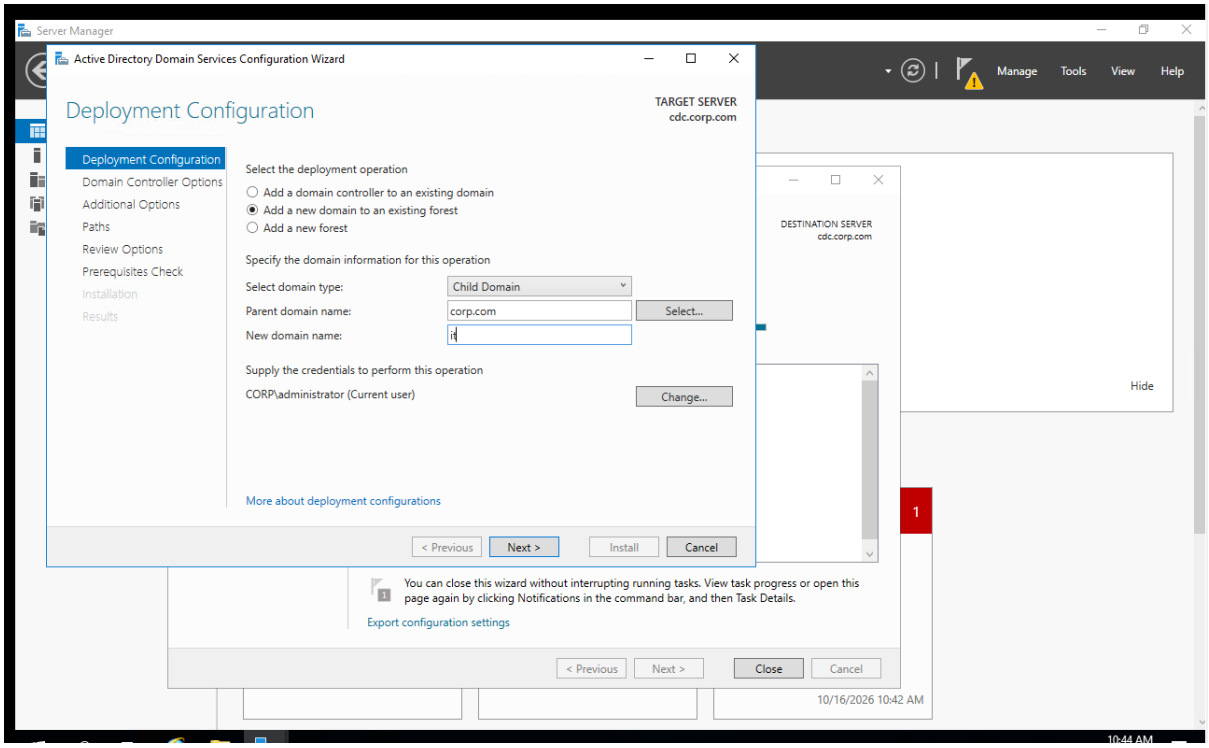
Pre-Requisites

1. PDC should be in network
2. Admin login with strong pwsd
3. CDC should have static Ip + server OS
4. CDC should be a domain join machine

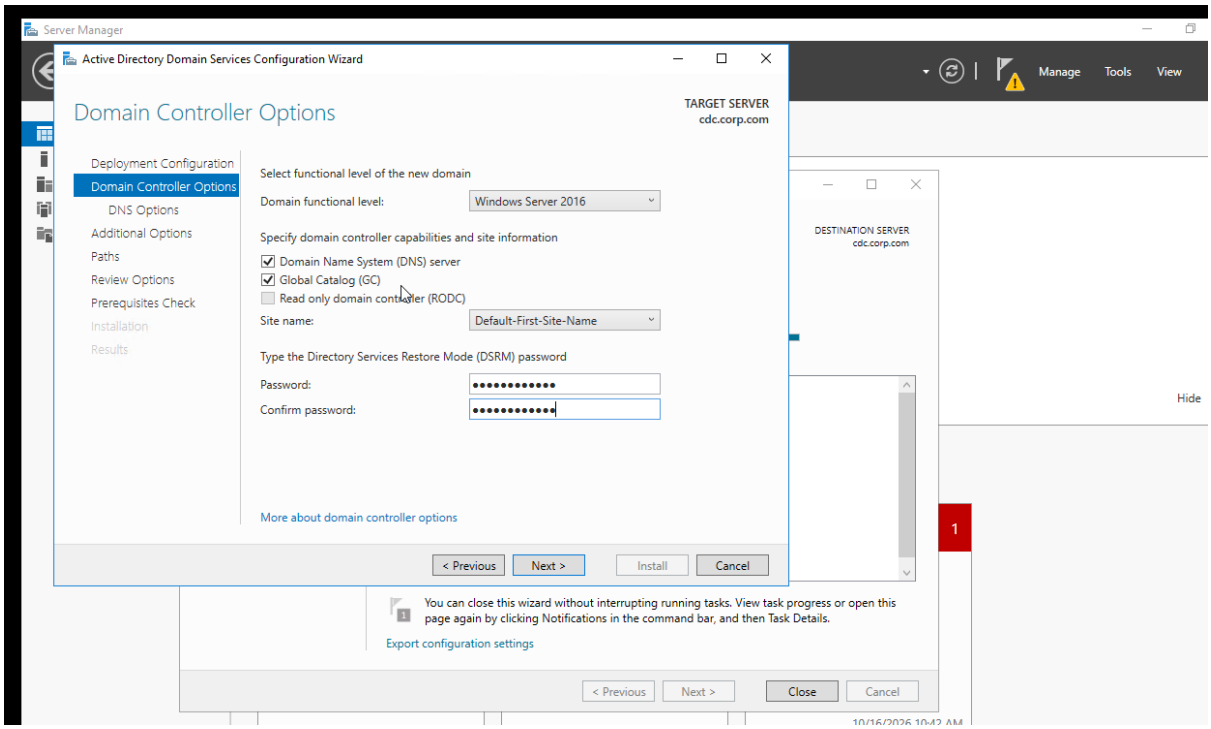
Adding child domain controller in domain controller select middle option that is new domain to and existing forest and add domain name IT

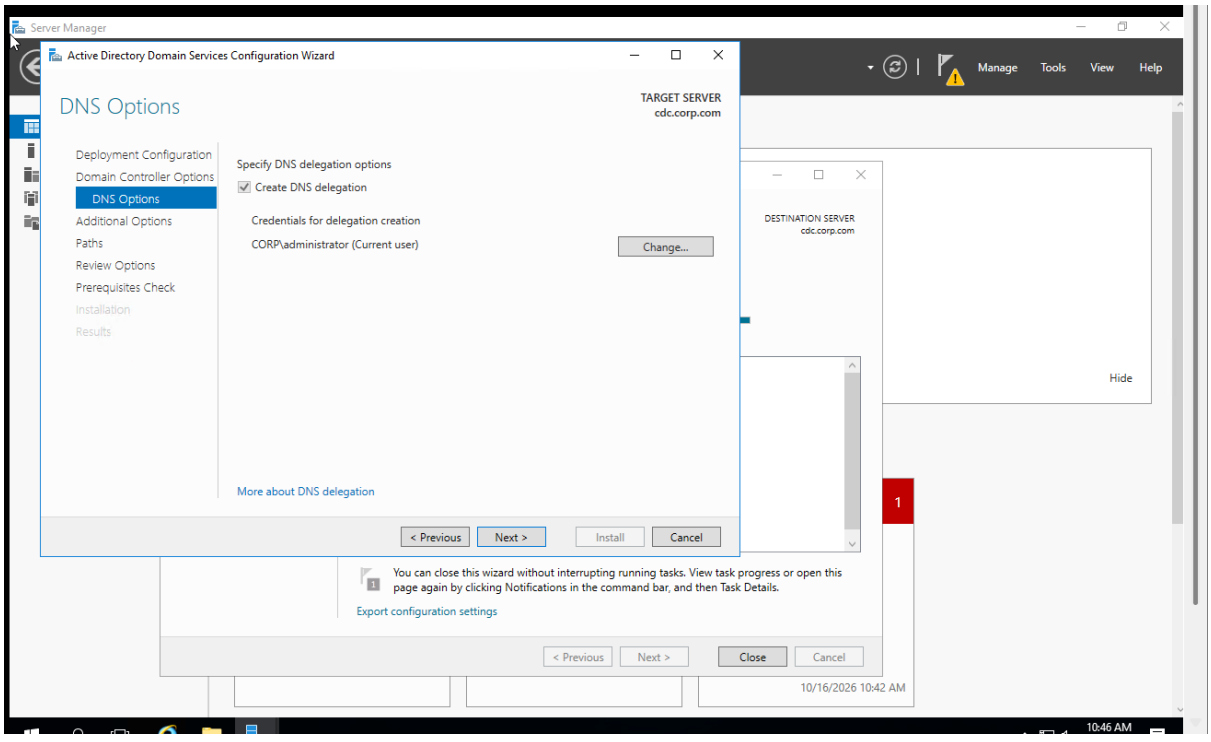
Do basic installation first and then promote this server



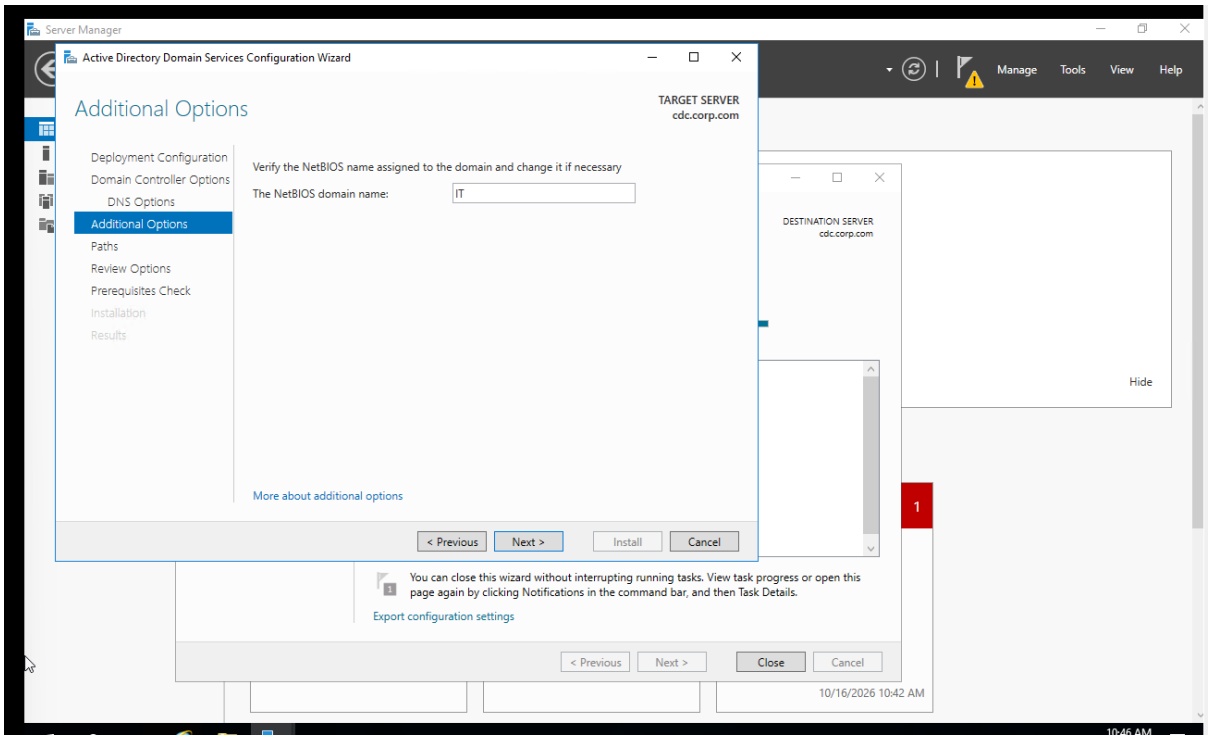


Add password

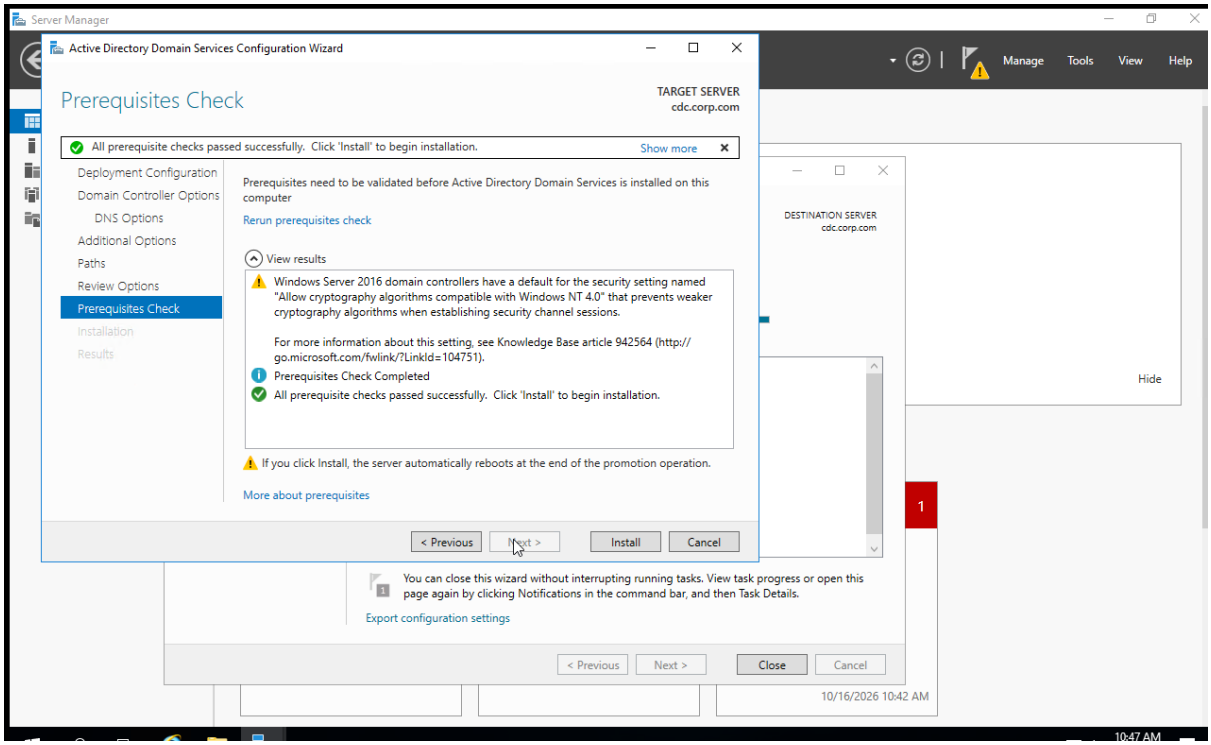


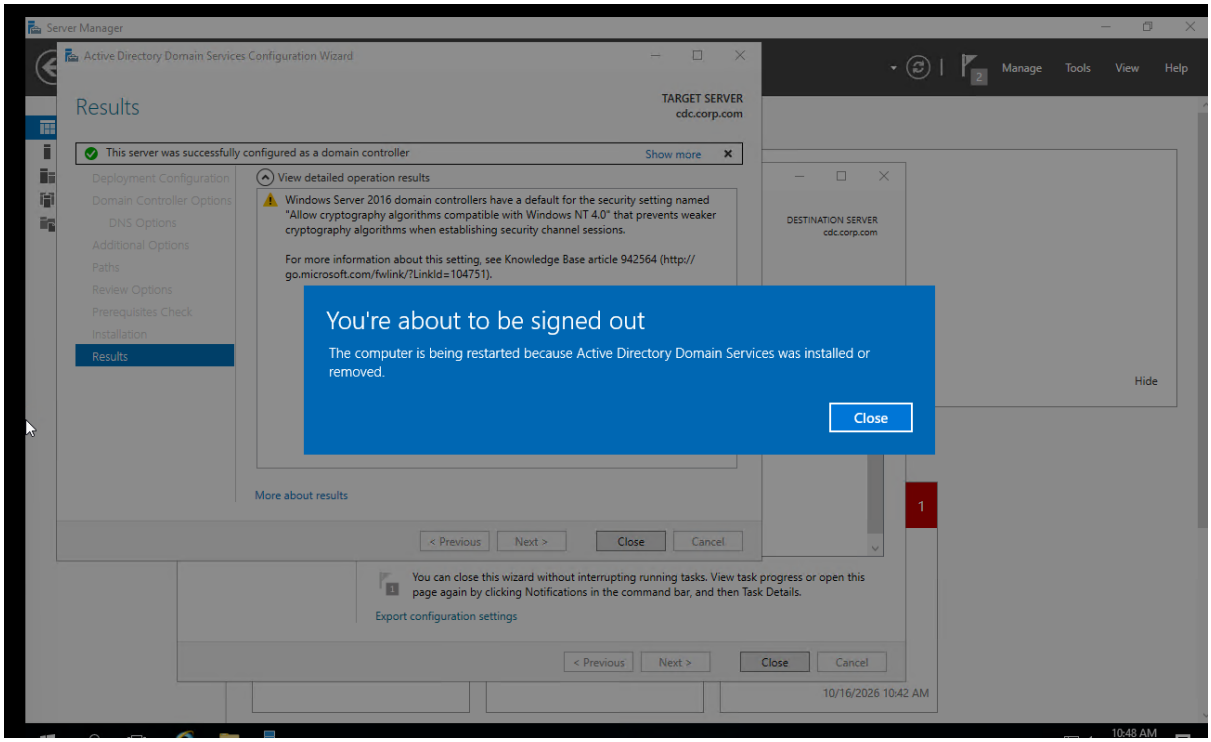


It will automatically reflect

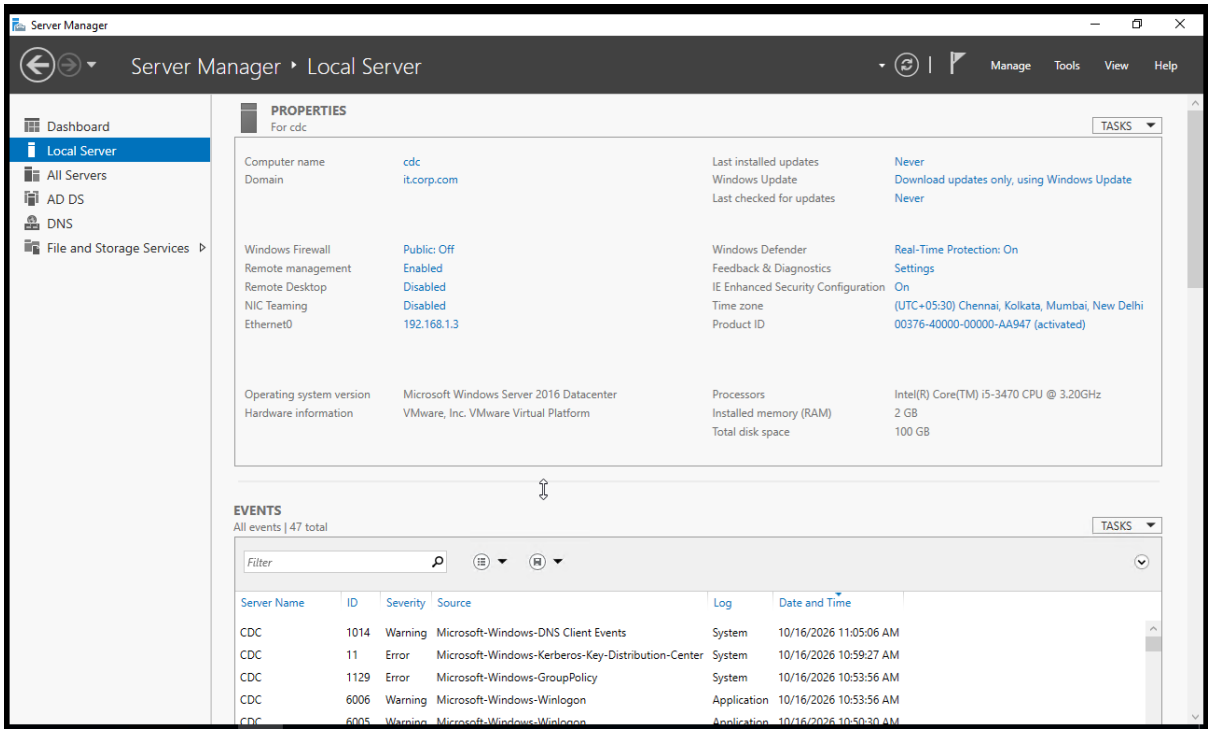


After green tick it will automatically restart

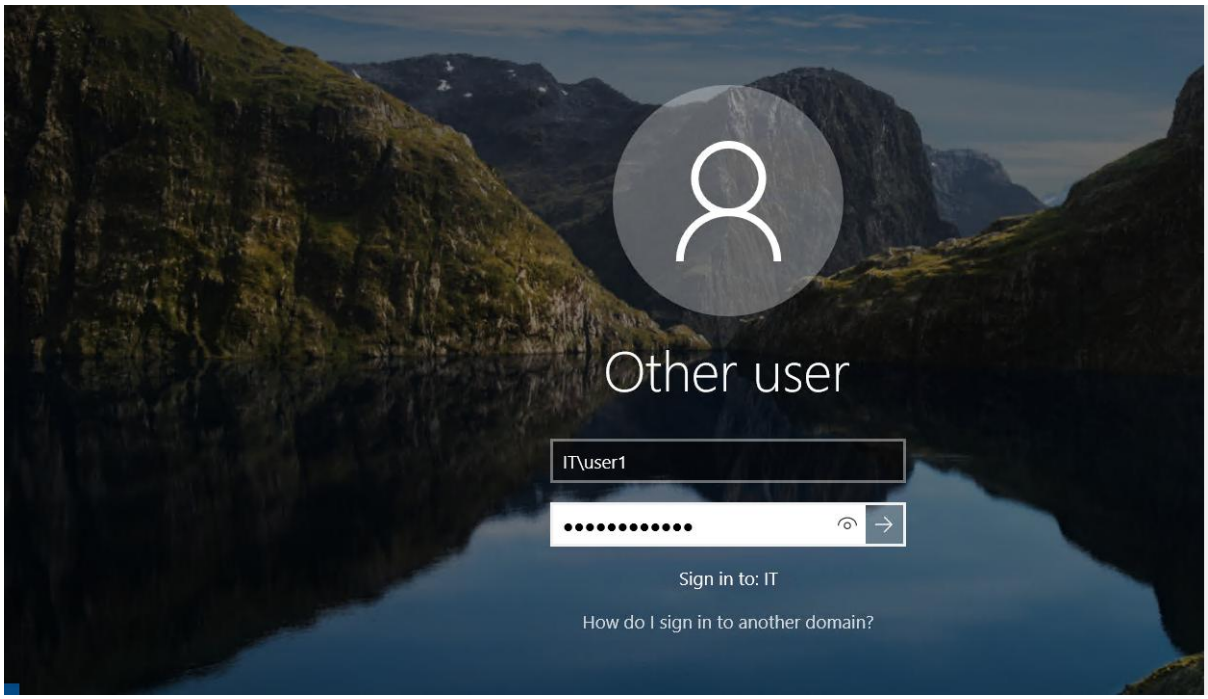




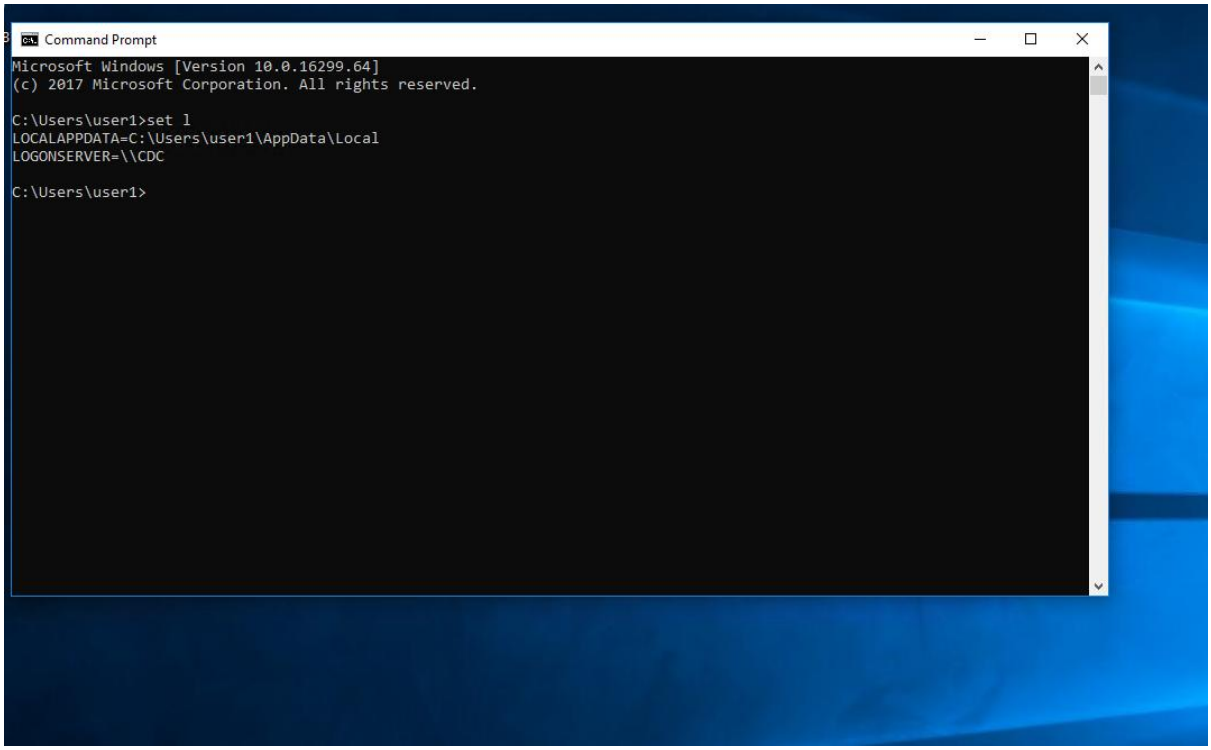
Changes will reflect in local server it.corp.com



Create a user1 and then you can login with IT\user1



Set l → will show the name of the logon server that is CDC if we logon with crop it will show DC



Trust Relationship

Direction of Trust

Transitivity

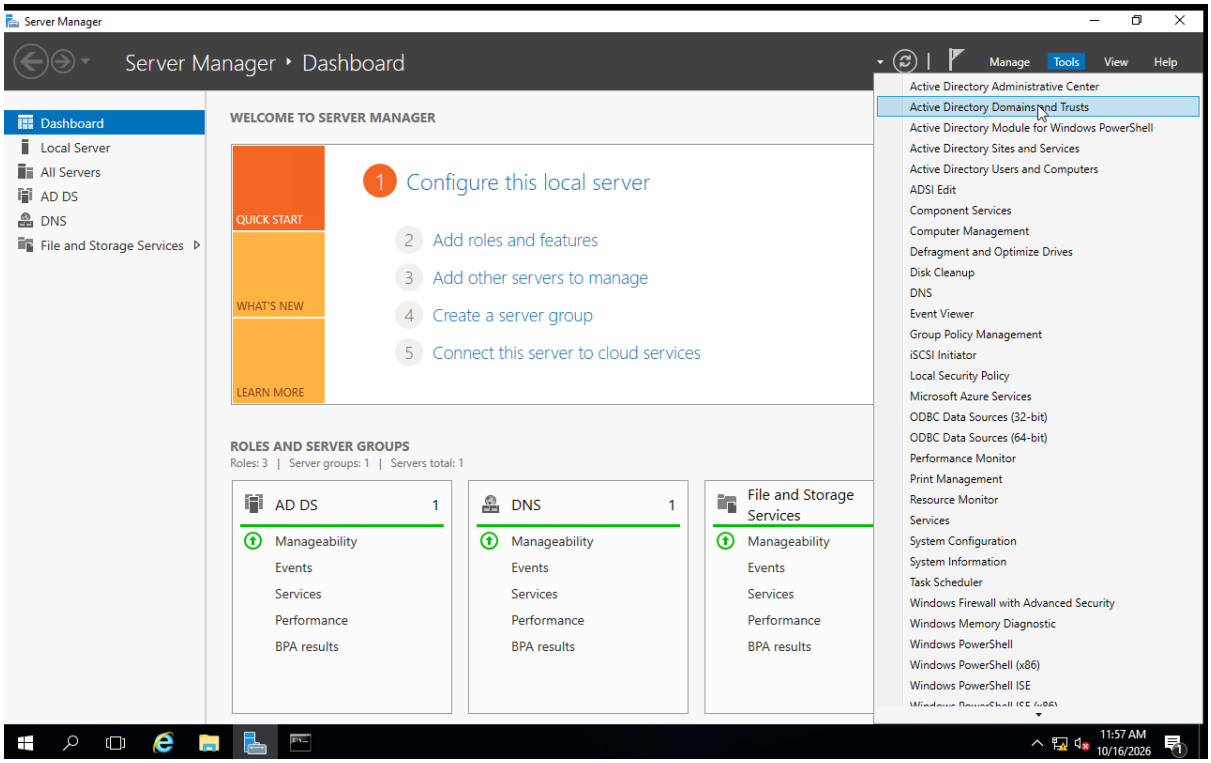
Types of Trust

1. Default
2. Realm
3. External
4. Forest
5. Short cut trust

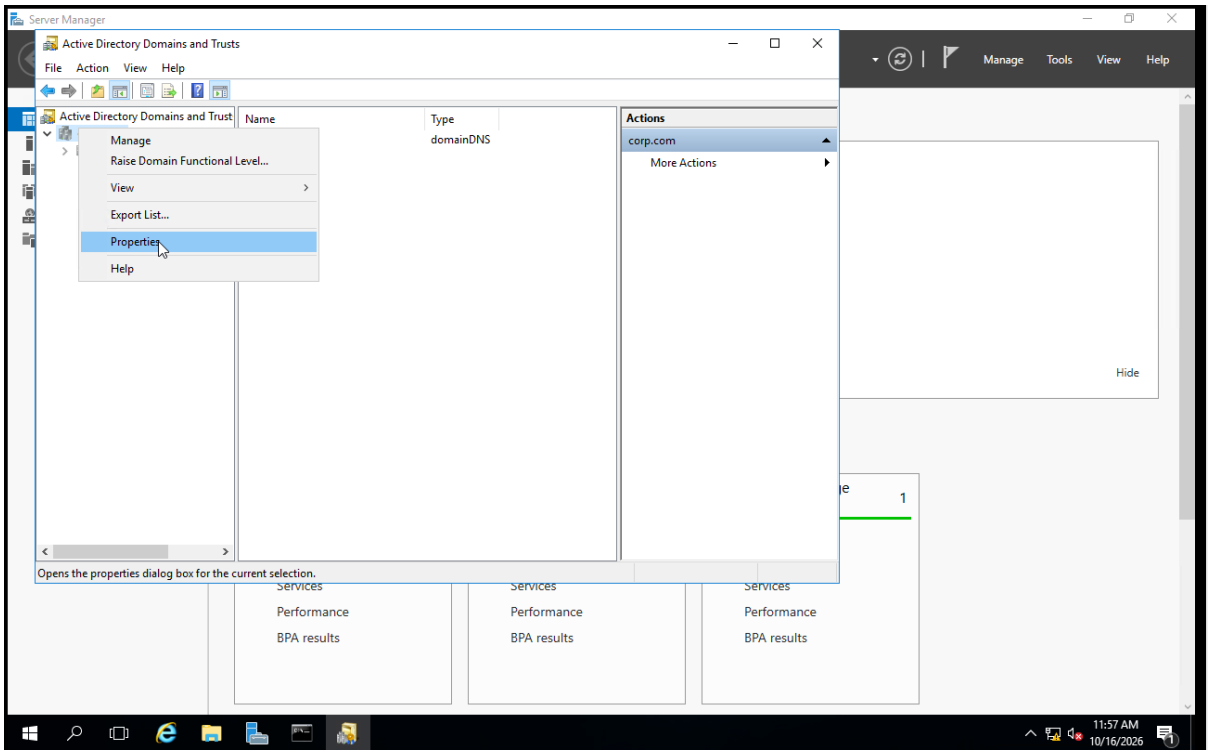
Practical only will be on Default trust and it has two types

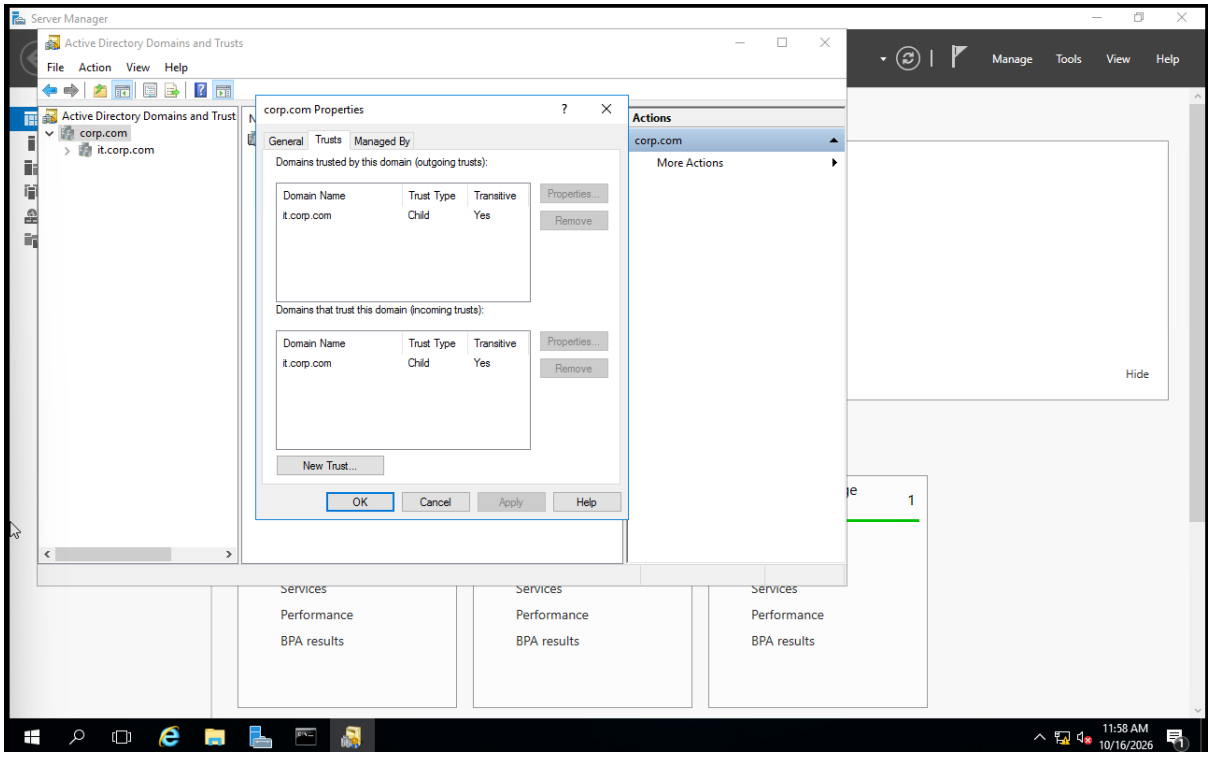
a. Parent-child (Transitive, Two-way trust)
b. Tree-root (not in syllabus)

To see the trust and domain we can access it from tools

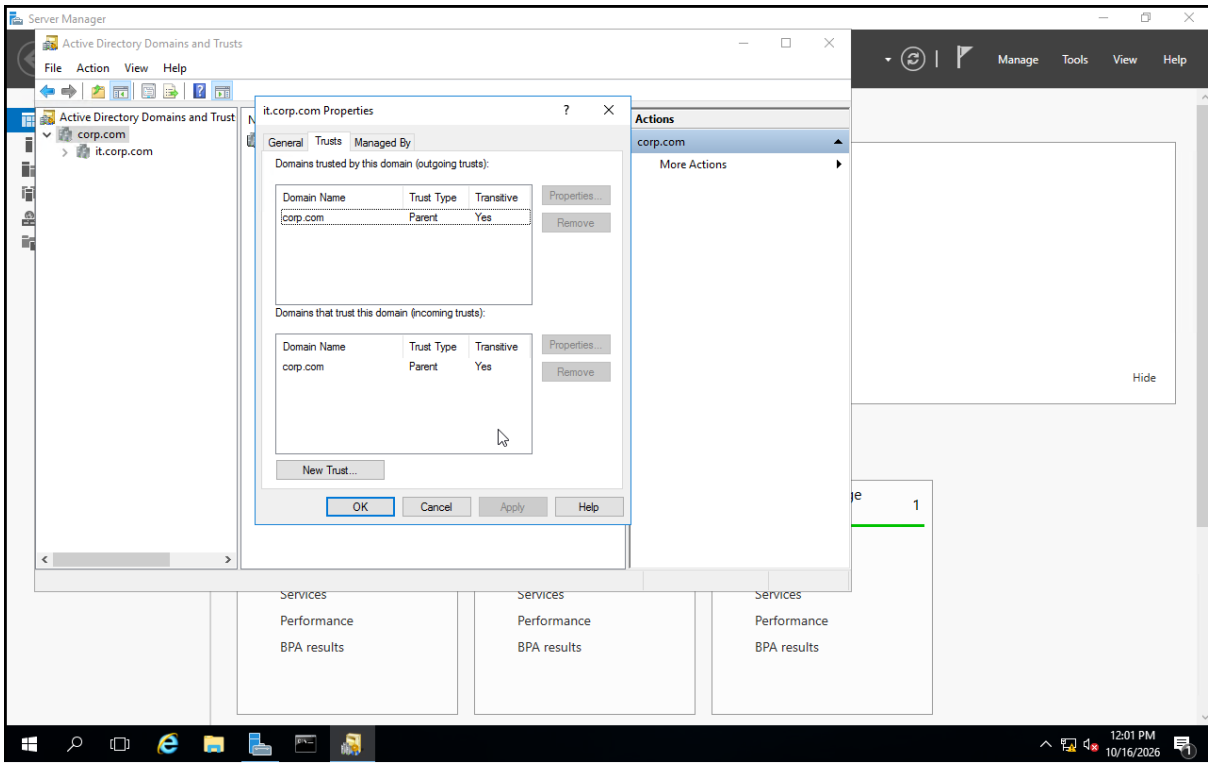


Go to properties of corp.com where you can see the trust policy



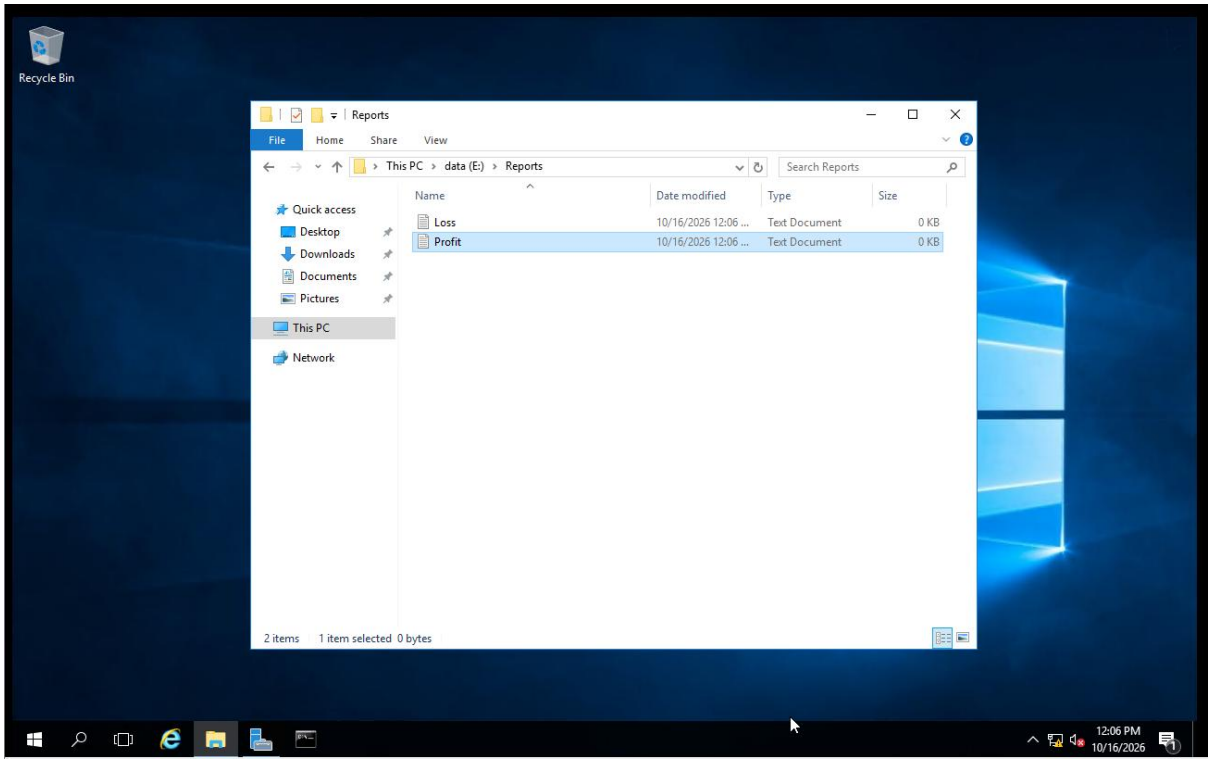


Go to properties of it.corp.com where you can see the trust policy

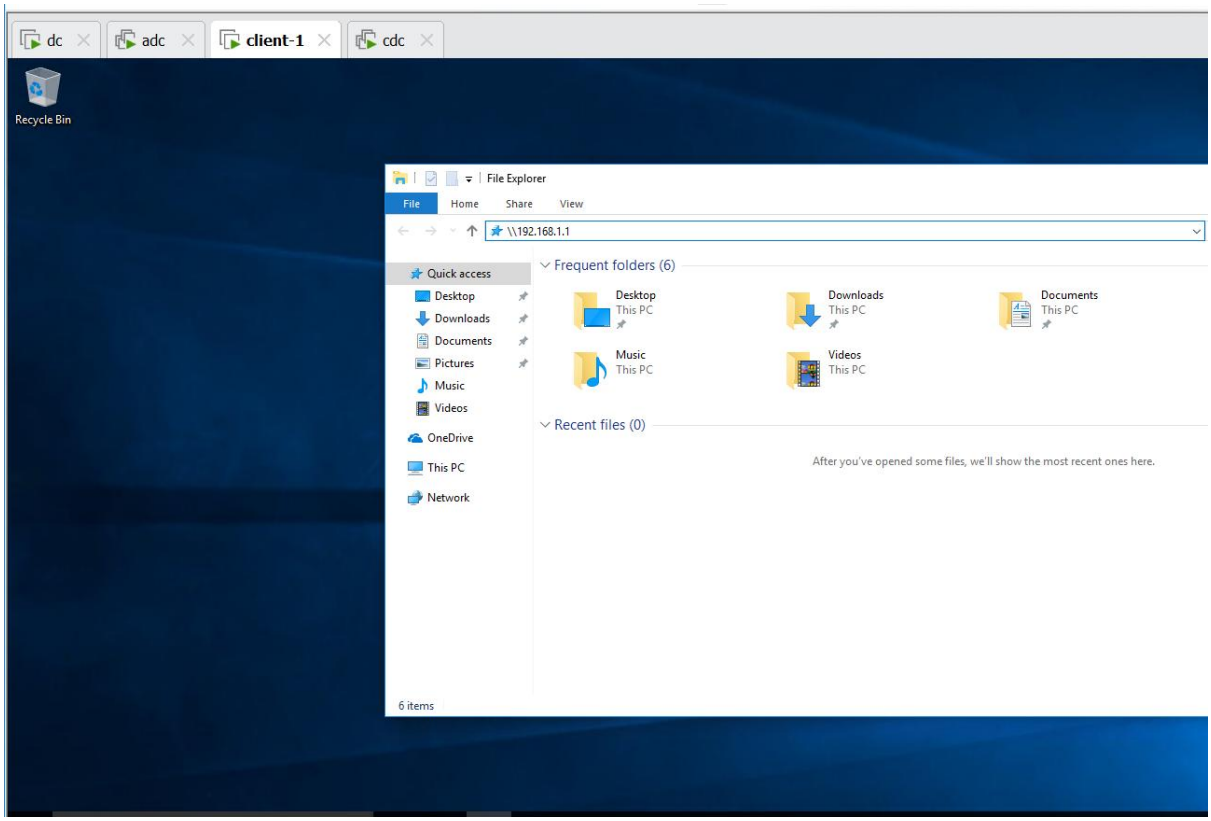


Sharing the resources of parent domain to child domain

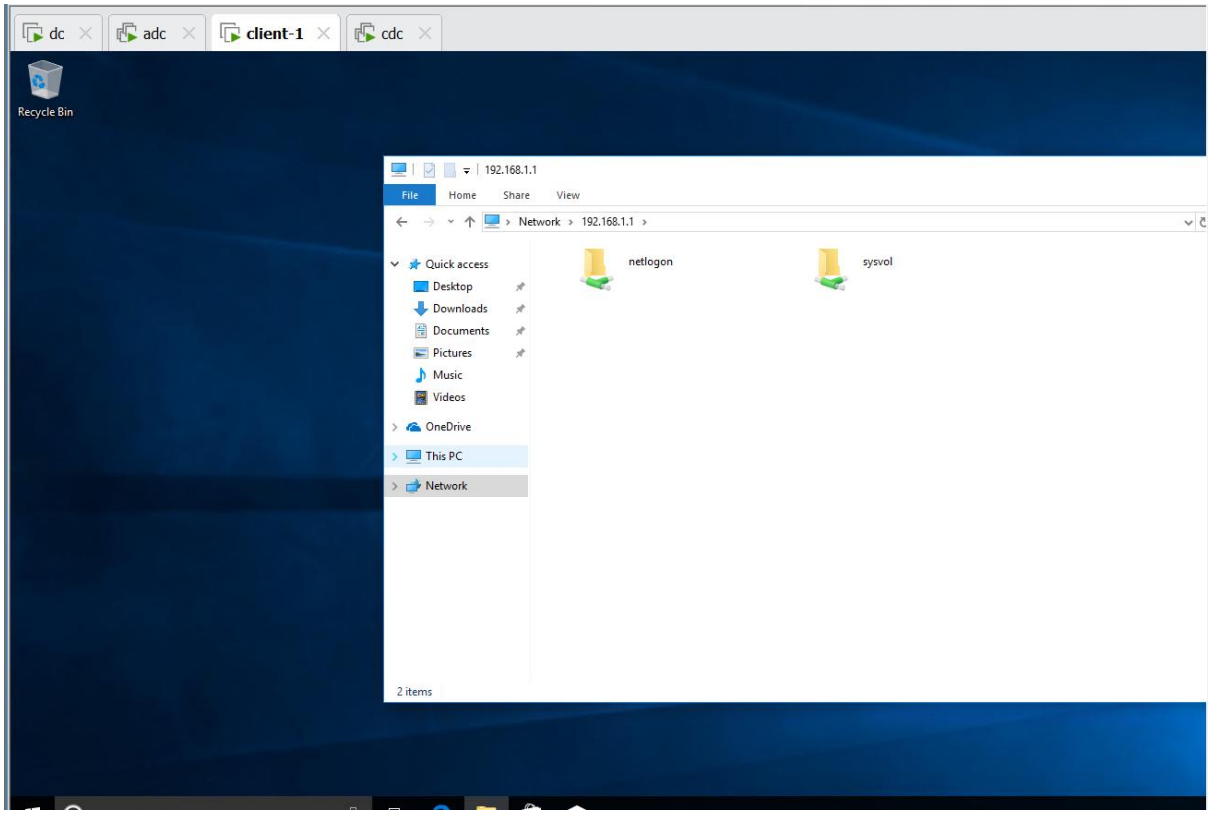
DC -- Creating a new partition 10GB -- Create folder reports (profit/loss)



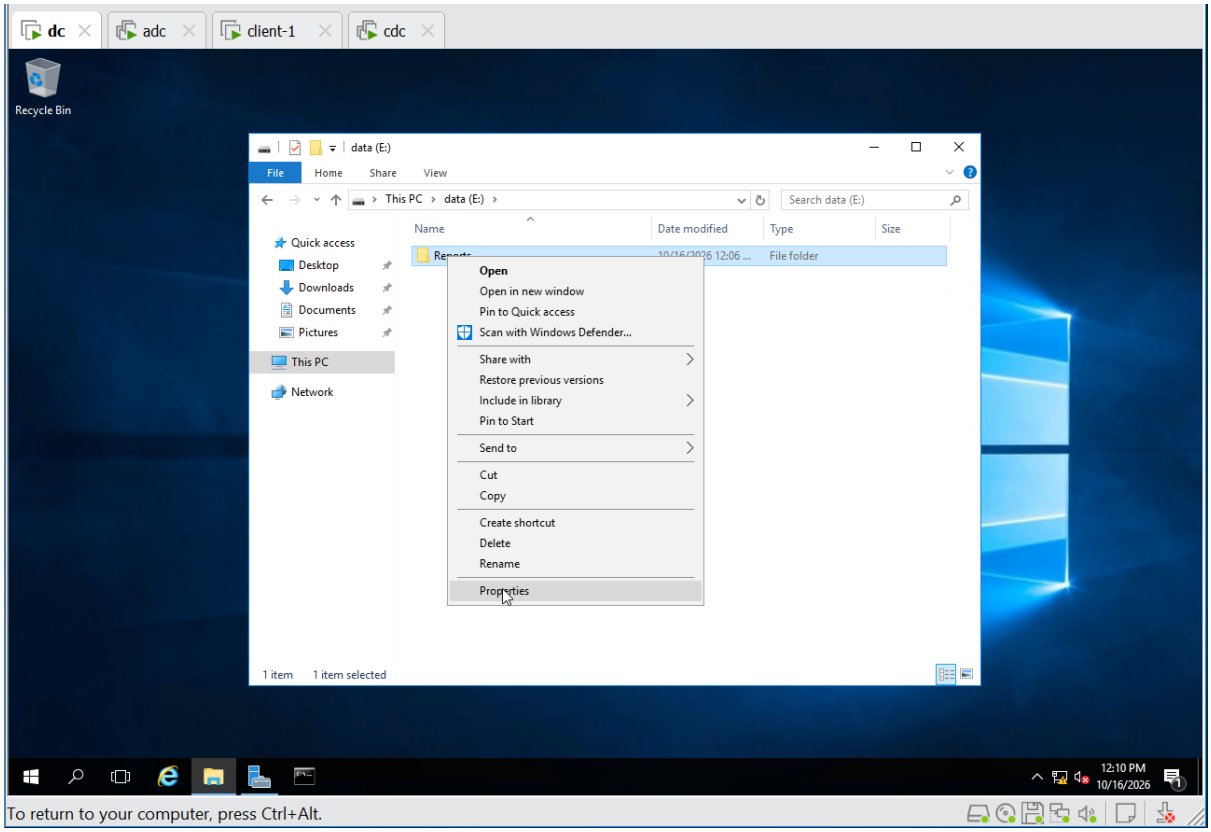
In client login with IT/user1 and in Search tab add the IP



Because we have not shared folder, yet it is not visible in sharing



Go to properties of folder that you want to share



Go to sharing → advance sharing

Description
Active Directory Domain Services (AD DS) stores information about objects on the network and makes this information available to users and network administrators. AD DS uses domain controllers to give network users access to permitted resources anywhere on the network through a single logon process.

Which disk do you want to use?
Disk
Create a new virtual disk
A virtual disk is composed of one or more files on the host file system, which will appear as a single hard disk to the guest operating system. Virtual disks can easily be copied or moved on the same host or between hosts.
Use an existing virtual disk
Choose this option to reuse a previously configured disk.
Use a physical disk (for advanced users)
Choose this option to give the virtual machine direct access to a local hard disk. Requires administrator privileges.

Example: Using a local path:
C:\windows\web\wallpaper\home.jpg
Example: Using a UNC path:
\\Server\Share\Corp.jpg
Wallpaper Style:
Stretch
Specifies the desktop background ("wallpaper") displayed on all users' desktops.
This setting lets you specify the wallpaper on users' desktops and prevents users from changing the image or its presentation. The wallpaper you specify can be stored in a bitmap (*.bmp) or JPEG (*.jpg) file.
To use this setting, type the fully qualified path and name of the file that stores the wallpaper image. You can type a local path, such as C:\Windows\web\wallpaper\home.jpg or a UNC path, such as \\Server\Share\Corp.jpg. If the specified file is not available when the user logs on, no wallpaper is displayed. Users cannot specify alternative wallpaper. You can also use this setting to specify that the wallpaper image be centered, tiled, or stretched. Users cannot change this specification.
If you disable this setting or do not configure it, no wallpaper is displayed. However, users can select the wallpaper of their choice.

Prevents the user from enabling or disabling Active Desktop or changing the Active Desktop configuration.
This is a comprehensive setting that locks down the configuration you establish by using other policies in this folder. This setting removes the Web tab from Display in Control Panel. As a result, users cannot enable or disable Active Desktop. If Active Desktop is already enabled, users cannot add, remove, or edit Web content or disable, lock, or synchronize Active Desktop components.

Add a New Zone
The Domain Name System (DNS) allows a DNS namespace to be divided into zones. Each zone stores information about one or more contiguous DNS domains.
To add a new zone, on the Action menu, click New Zone.
Create a new zone.

Server Manager
New Zone Wizard
Reverse Lookup Zone Name
A reverse lookup zone translates IP addresses into DNS names.
To identify the reverse lookup zone, type the network ID or the name of the zone.
Network ID:
192 .168 .1
The network ID is the portion of the IP addresses that belongs to this zone. Enter the network ID in its normal (not reversed) order.
If you use a zero in the network ID, it will appear in the zone name. For example, network ID 10 would create zone 10.in-addr.arpa, and network ID 10.0 would create zone 0.10.in-addr.arpa.
Reverse lookup zone name:
1.168.192.in-addr.arpa

New Zone Wizard
Dynamic Update
You can specify that this DNS zone accepts secure, nonsecure, or no dynamic updates.
Dynamic updates enable DNS client computers to register and dynamically update their resource records with a DNS server whenever changes occur.
Select the type of dynamic updates you want to allow:
Allow only secure dynamic updates (recommended for Active Directory)
This option is available only for Active Directory-integrated zones.
Allow both nonsecure and secure dynamic updates
Dynamic updates of resource records are accepted from any client.
This option is a significant security vulnerability because updates can be accepted from untrusted sources.
Do not allow dynamic updates
Dynamic updates of resource records are not accepted by this zone. You must update these records manually.

Ipconfig /flushdns

Ipconfig /registerdnsex

```
C:\Users\administrator>ipconfig /flushdns

Windows IP Configuration

Successfully flushed the DNS Resolver Cache.

C:\Users\administrator>ipconfig /registerdns

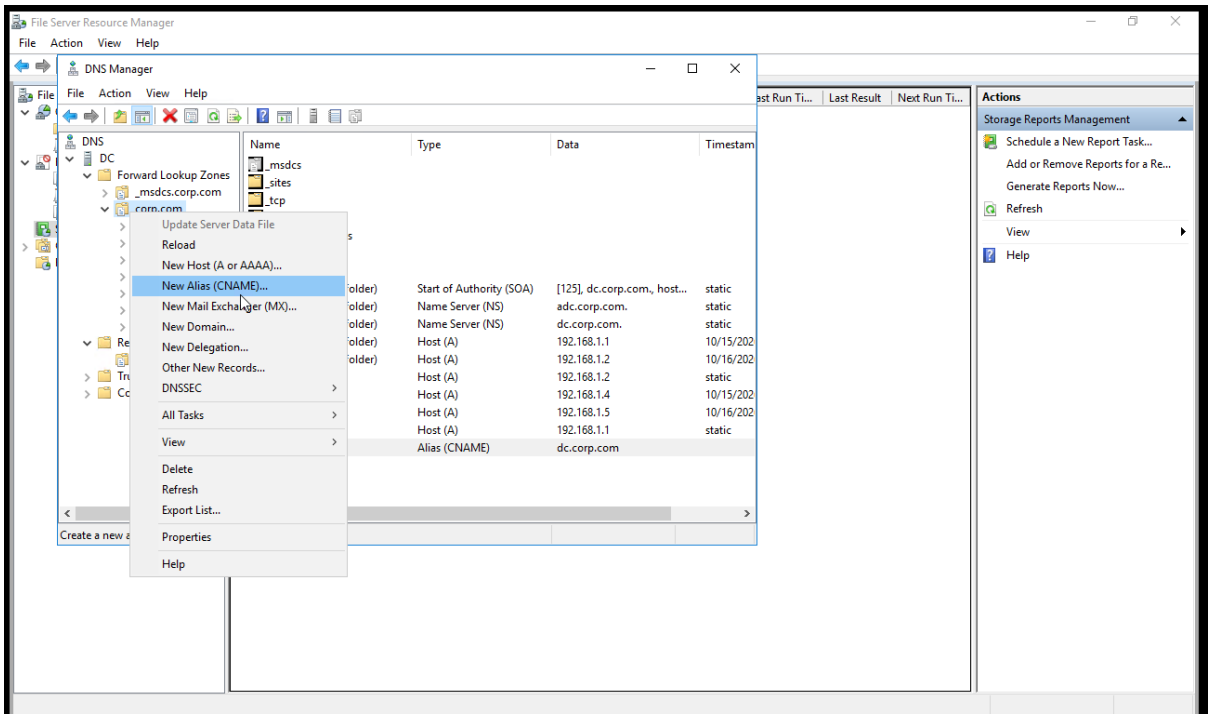
Windows IP Configuration

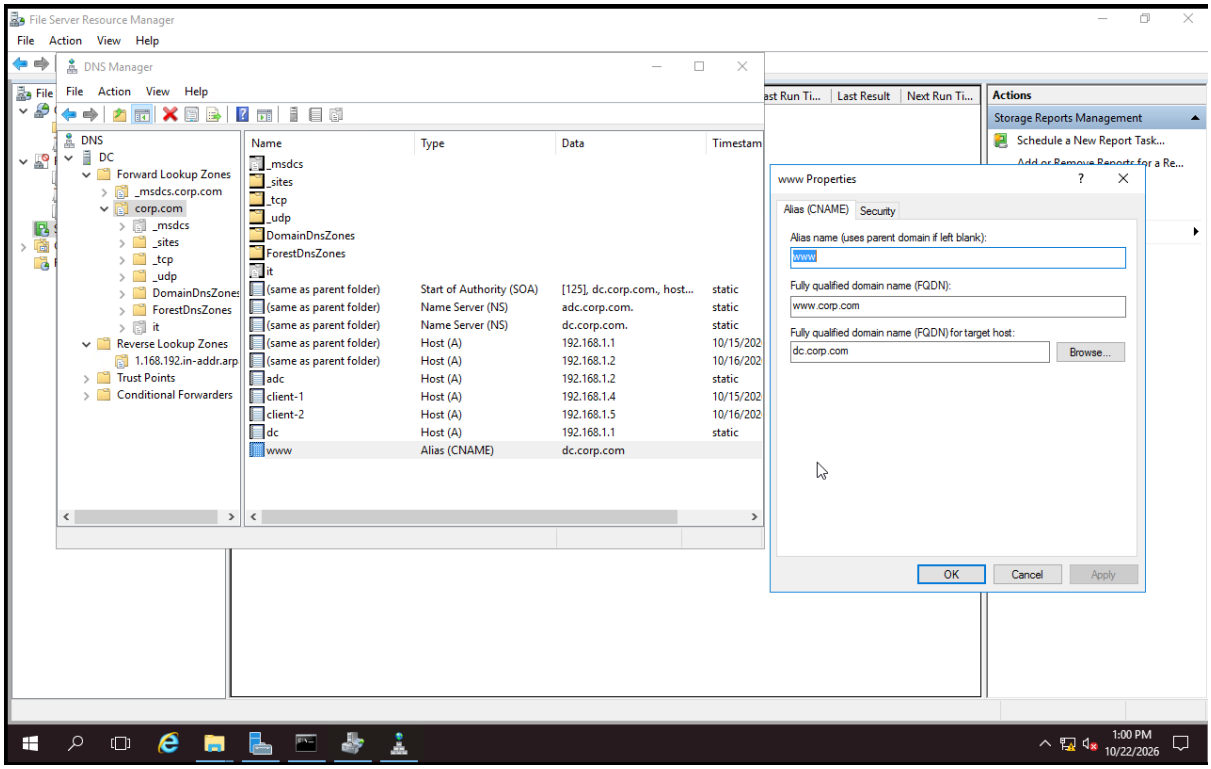
Registration of the DNS resource records for all adapters of this computer has been initiated. Any errors will be report
ed in the Event Viewer in 15 minutes.
```

Nslookup

A record

C name



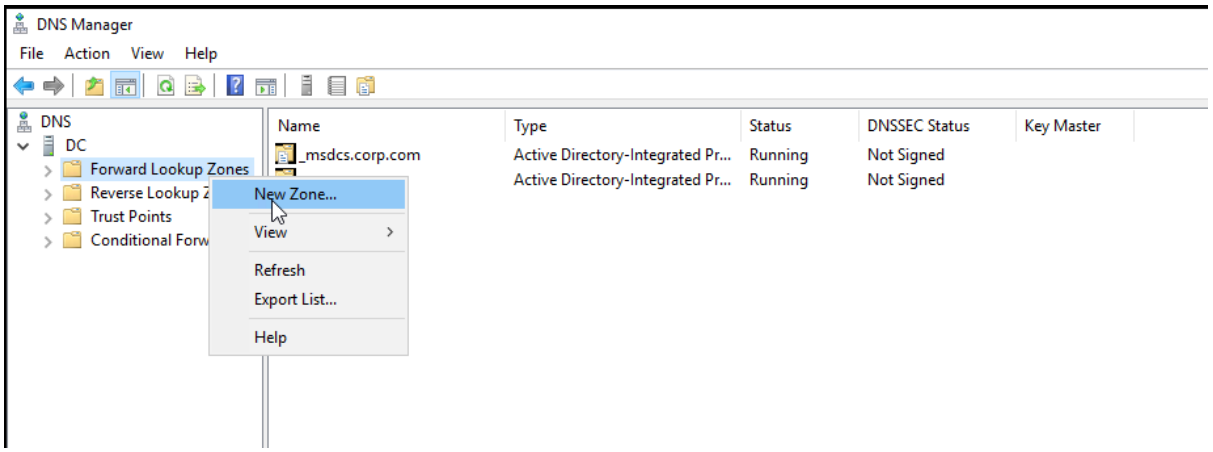


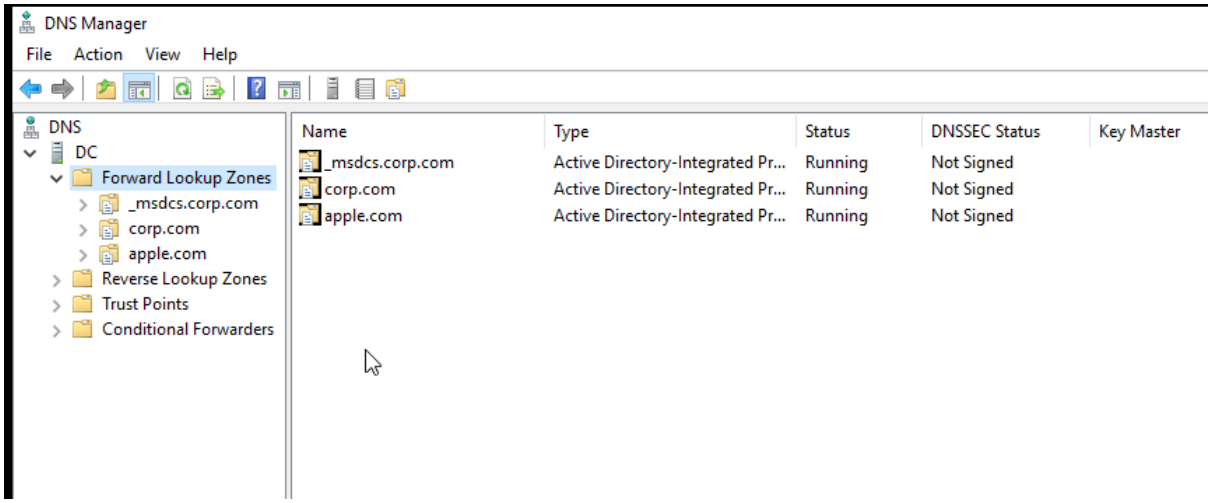
```
C:\Users\administrator>ping www.dc.com
Ping request could not find host www.dc.com. Please check the name and try again.

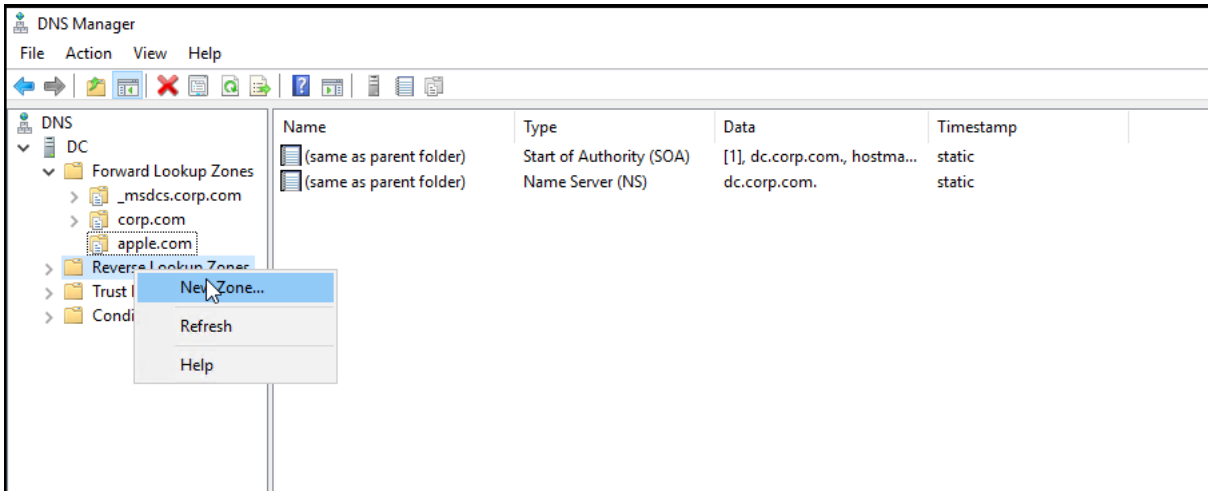
C:\Users\administrator>ping www.corp.com

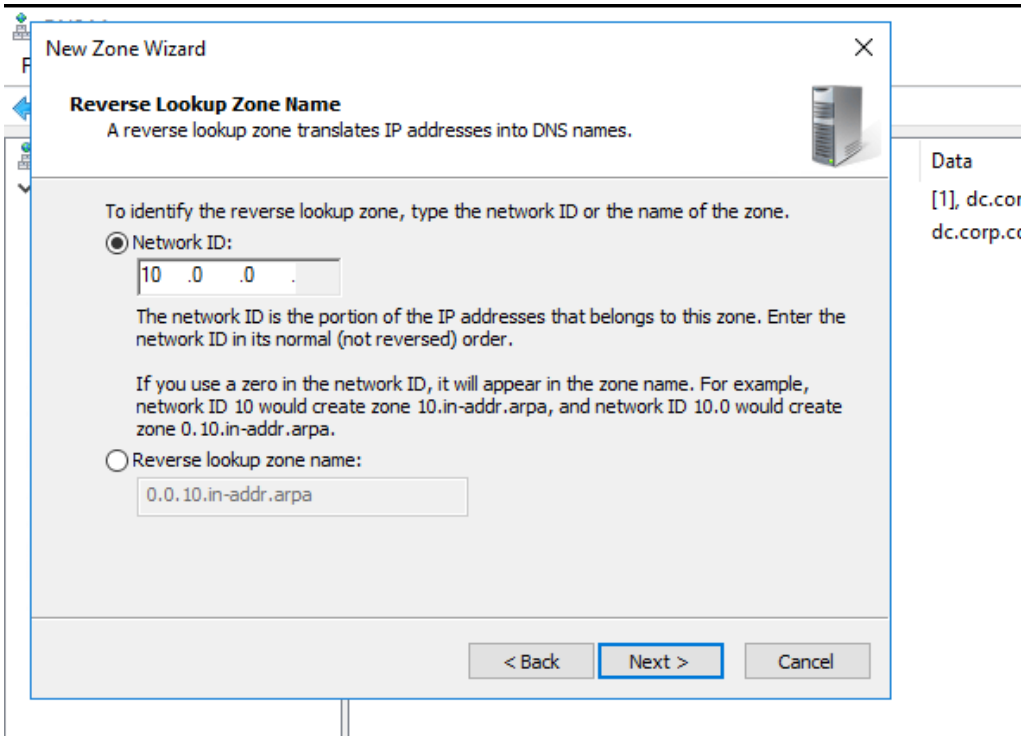
Pinging dc.corp.com [192.168.1.1] with 32 bytes of data:
Reply from 192.168.1.1: bytes=32 time<1ms TTL=128
Reply from 192.168.1.1: bytes=32 time<1ms TTL=128
Reply from 192.168.1.1: bytes=32 time<1ms TTL=128
```

Forward lookup zone and reverse lookup zone









New Zone Wizard
Reverse Lookup Zone Name
A reverse lookup zone translates IP addresses into DNS names.
To identify the reverse lookup zone, type the network ID or the name of the zone.
Network ID:
10 .0 .0 .
The network ID is the portion of the IP addresses that belongs to this zone. Enter the network ID in its normal (not reversed) order.
If you use a zero in the network ID, it will appear in the zone name. For example, network ID 10 would create zone 10.in-addr.arpa, and network ID 10.0 would create zone 0.10.in-addr.arpa.
Reverse lookup zone name:
0.0.10.in-addr.arpa

Reservations
A reservation ensures that a DHCP client is always assigned the same IP address.
To add a reservation, on the Action menu, click New Reservation.
Note: An exclusion prevents a DHCP client from ever obtaining an address from a specified address range. Exclusion ranges can be defined in Address Pool.
For more information about reservations and exclusions, see online Help.

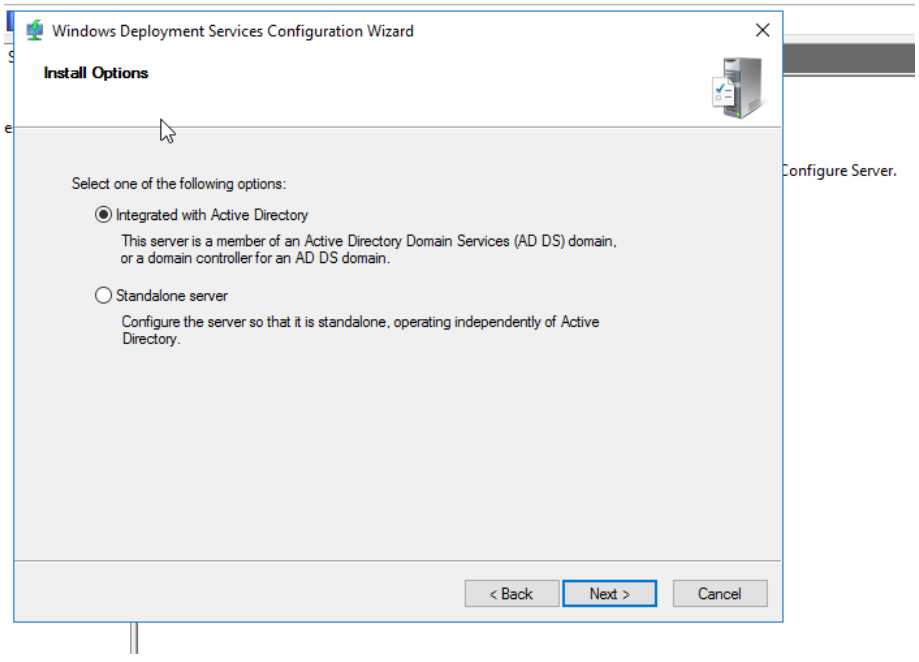
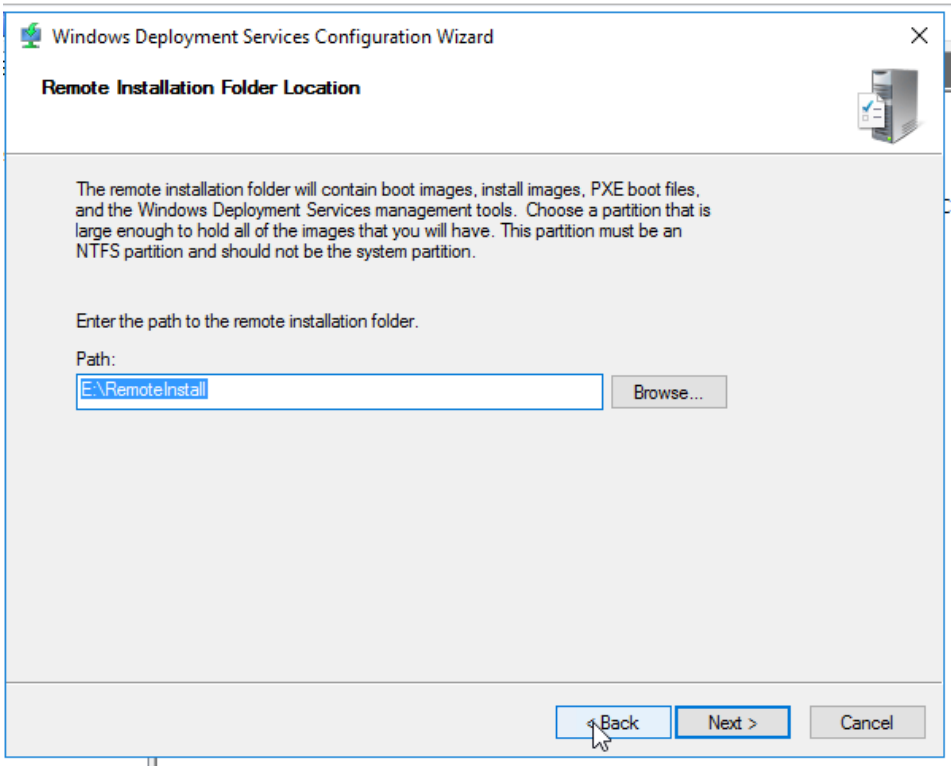
Windows Deployment Services is not configured
This server is not configured. To configure this server, right-click the server, and then click Configure Server.
You must be a local administrator to perform this task.
Configures this server for the first use.



Windows Deployment Services Configuration Wizard
Install Options
Select one of the following options:
Integrated with Active Directory
This server is a member of an Active Directory Domain Services (AD DS) domain, or a domain controller for an AD DS domain.
Standalone server
Configure the server so that it is standalone, operating independently of Active Directory.
< Back
Next >
Cancel



Windows Deployment Services Configuration Wizard
Remote Installation Folder Location
The remote installation folder will contain boot images, install images, PXE boot files, and the Windows Deployment Services management tools. Choose a partition that is large enough to hold all of the images that you will have. This partition must be an NTFS partition and should not be the system partition.
Enter the path to the remote installation folder.
Path:
E:\RemoteInstall
Browse...

Windows Deployment Services Configuration Wizard
Proxy DHCP Server
If Dynamic Host Configuration Protocol (DHCP) is running on this server, check both of the following check boxes and use DHCP tools to add appropriate PXE options to all DHCP and DHCPv6 scopes.
If a non-Microsoft DHCP server is running on this server, then check the first box and manually configure DHCP option 60 and DHCPv6 Vendor Class for Proxy DHCP.
The Windows Deployment Services Configuration Wizard detected Microsoft DHCP service running on the server. Please select from the following options:
Do not listen on DHCP and DHCPv6 ports
Configure DHCP options for Proxy DHCP

Windows Deployment Services Configuration Wizard
PXE Server Initial Settings
You can use these settings to define which client computers this server will respond to. Known clients are the clients that have been prestaged. When the physical computer performs a PXE boot, the operating system will be installed based on the settings that you have defined.
Select one of the following options:
Do not respond to any client computers
Respond only to known client computers
Respond to all client computers (known and unknown)
Require administrator approval for unknown computers. When you select this option, you must approve the computers using the Pending Devices node in the snap-in. Approved computers will be added to the list of prestaged clients.
To configure this server, click Next.
