

Quick note

Static next hop

ip route <unknown network address> <subnet_mask> <next_hop_IP>

Advertise all the unknown networks in topology if network is directly connected to router then its not a unknown network

Next hop ip is ip of next ip of network where our packets are going first

Static self exit

ip route <unknown network address> <subnet_mask> <exit_port>

Exit port is next port where our packets go if we want to go to unknown network

Default routing

Subnet mask and ip add will be 0.0.0.0 and you can do it both ways using nexthop or self exit

Example

ip route 0.0.0.0 0.0.0.0 s0/0

ip route 0.0.0.0 0.0.0.0 netxhop

Console Password

Connect pc and router using console cable

Line console 0

Password 123456

Login

Same for aux

Line aux

Telnet

Line vty 0 4

Password 123456

Login

(if you want to access it you need to set normal or secret password to)

Main command is

Line vty 0 4

To do default encryption use

Service password-encrytion

SSH

Needs user and domain name and hostname

Ip domain-name name

User hemant password 123456

Crypto key generate rsa

Line vty 0 4

Transport input ssh

Login local

Dhpc

Needs domain name, hostname

Ip dhpc pool domainname

Network <netowrk_ip> <subnet_mask>

Default-router <gateway>

And if you want to see assigned ip

Use

Show ip dhcp binding

IOS backup

After backup if you want to come out of romon use reset

Password recovery

You need to do copy run start

First go to rommon

Run

Confreg 0x2142 (romon)

Then boot

You will start in booting mode

Remove password and set

Config-register 0x2102

Copy start to run

And reload
